Price Rs. 7 - - - By V.P.P Rs 7-8.

Bennett, Coleman & Co., Ltd.,
BOMBAY, CALCUTTA AND LONDON

"THE ILLUSTRATED WEEKLY OF INDIA" has long been acknowledged to be one of the best edited and most attractive journals in the East. Notwithstanding the high standard attained in the past, the publishers have recently introduced many new features and broadened the scope of the paper generally.

Prominence is given to Indian and other News of more than ordinary interest to India, and these together with the general News of the World are presented in a fully illustrated and most attractive form. Authoritative articles on current politics and kindred matters constitute a regular feature.

Sport and Drama are ably dealt with by experts. The increasing activities and interests of ladies are prominently catered for.

Each issue contains upwards of 100 illustrations reproduced in a style comparable only with the best.

The "*Illustrated Weekly*" maintains its place as the recognised leading periodical of the East. It is indispensable to those whose interests centre on India and Indian affairs.

If you are not already a subscriber, fill in the attached form and forward it to us together with a remittance covering the period for which you desire to subscribe.

For particulars and prospectus apply to

THE HEADMASTER, Kinmel School, Denbighshire, Great Britain.

DRAINAGE PROBLEMS OF THE EAST.

(In Two Volumes)

BY

C. C. JAMES

(SECOND EDITION.)

MEMBER of the Institute of Civil Engineers, Fellow of the Royal Meteorological Society, Fellow of the Royal Sanitary Institute, Member of the Incorporated Association of Municipal and County Engineers, Examiner in Sanitary Engineering to the University of Bombay, Author of "Oriental Drainage," "Notes on Sewage Disposal" and "Further Notes on Sewage Disposal." This work is one of the best ever published in India dealing with Drainage problems and as Mr Carkeek James had the unique opportunity of seeing practically all the large drainage schemes carried out in Bombay, this edition is of immense value and is almost certain to win the widespread approval of all engineers dealing with kindred problems anywhere East of Suez.

Price per set Rs. 25

By V.P.P. Rs. 26-4

VIEWS OF BOMBAY OLD AND NEW.

Preface to the XVIII Annual Volume

OF THE

INDIAN YEAR BOOK, 1931.

THE Editors have to thank many correspondents who during the past year have sent them suggestions for the improvement of this book. The Indian Year Book is intended above all to be a book of reference, and its completeness and convenience of arrangement must necessarily depend to a great extent on the part taken in its editing by the members of the public who most use it.

The help extended to the Editors by various officials, and more particularly by the Director of Information and Labour Intelligence, Bombay, and the Indian Commercial Intelligence Department, has again been readily given and is most gratefully acknowledged. Without such help it would be impossible to produce the Year Book with up-to-date statistics.

Suggestions for the improvement or correction of the Year Book may be sent to the Editors at any time, but those which reach them before October have a better chance of being adopted than later suggestions which only reach them after the work of revision has been partly completed.

*The Times of India, Bombay,
January, 1931*

An Indian Glossary.

- ABEER**.—Excess of liquors and drugs
- ACHHUT**.—Untouchable (Hindi) Asuddhar
- ACREAGE CONTRIBUTION**.—Contribution paid by holders of land irrigated by Government

SARANJAM—Land held revenue free or on a reduced quit rent in consideration of political services rendered by the holder s ancestors originally feudal tenure land for maintaining troops.

SARDAR (corrupted to *SERDAR*)—A leading Government official either civil or military even a Grand Vizier. Nearly all the Punjab Barons bear this title. It and *Din as* are like in value and used by both Hindus and Mohammedans but Mohammedans only are *Wali*, *Sultan*, *Amir*, *Mir*, *Mirza*, *Mian*, and *Khan*.

SARKAR—(1) The Government, (2) a tract of territory under Muhammadan rule, corresponding roughly to a Division under British administration.

SARSUBAR—An officer in charge of a Division in the Baroda State corresponding to Commissioner of British territories.

SATI—Suicide by a widow especially on the funeral pyre of her husband.

SARUKAR SARKAR SOWKAR—Banker, dealer in money, exchange, etc, money lender.

SATTYAGRAHA—(lit. Insistence on truth) passive resistance.

- BATTAGHAN**—A passive resistor one who will follow the truth wherever it may lead
- BATTA**—Speculation
- BAUDAGAR**—Merchant
- BAWAL**—A Hindu title implying a right distinction (lit one-fourth better than others)
- BAWWA**—A title borne by chiefs in the Shan States, Burma
- BEHAL** or cotton tree—A large forest tree with crimson flowers and pods containing a quantity of floss, **BOMBAX MALABARICUM**
- BHROW, SARAD**—A goat antelope, **NEMORHANDUS SUBALANUS**
- BETH, BETHK**—Merchant, banker
- SETTLEMENT**—(1) The preparation of a cadastral record and the fixing of the Government revenue from land, (2) the local inquiry made before Forest Reserves are created (3) the financial arrangement between the Government of India and Local Governments
- SHAHID**—A Muslim martyr
- SHAHADA**—Son of a King
- SHAIKH or SHEIKH** (Arabic)—A chief
- SHAME UL-ULAMA**—A Mohammedan title denoting learned
- SHAMSHER JAYS**—"Sword of Battle" (a title of the Maharaja of Travancore)
- SHAMSHOG**—See **PAFWANI**
- SHASTRAS**—The religious law-books of the Hindus
- SHIGADI, seggare** Shigri—A pan on 3 feet with live charcoal in it
- SHER**—Tiger
- SHER ser, seer**—A weight, or measure varying much in size in different parts of the country The Railway ser is about 2 lbs
- SHERK, shetbla**—A Hindu or Jain merchant
- SHIGRAM**—See **TONGA**
- SHIRHAM or shau**—Blackwood A valuable timber tree. **DALBERGIA Sissoo**
- SHEUTH**—Literally heard 'Vedas revealed to inspired Rishis
- SHEROFF**—Banker
- SHUDDHI**—Literally purification. A movement started in Rajputana and Northern India for the reconversion to Hinduism of those, like the Malakans Rajputs, who, though Mohammedans for some generations, have retained many Hindu practices
- SIDI**—A variation of "Said" Generic name for negroes domiciled in the Bombay Presidency Also applied by the French to the negroes in their Army
- SILLADAR**—A native trooper who furnishes his own horse and equipment
- SINDHIA**—See under "Gachwar"
- SIRUTI**—Unrevealed Laws, as opposed to Shruti, revealed Vedas
- SOLA**—A water plant with a valuable pith, **AMSONYXOMERIS ASPERA**
- SONI, SONAR**—Goldsmith
- SOWAR**—A mounted soldier or constable
- SOWKAR**—Merchant
- SWADISHI**—Intensive form of *deshi* preferred by politicians as sounding more dignified
- HAI or SHRI**—Lit fortune beauty, a Sanskrit term used by Hindus in speaking of a person much respected (never addressed 'o him nearly = 'Esquire) used also of divinities The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*)
- SRAJYU SRAJYU**—Modern Hindu equivalent of Mr
- STUPA or tope**—A Buddhist tumulus, usually of brick or stone and more or less hemispherical containing relics
- SURAB**—(1) A province under Mahomedan rule (2) the officer in charge of a large tract in Baroda corresponding to the Collector of a British District (3) a group of Districts or Division, Hyderabad
- SUBANDAR**—(1) The governor of a province under Mahomedan rule, (2) a native infantry officer in the Indian Army, (3) an official in Hyderabad corresponding to the Commissioner in British territory
- SUB DIVISION**—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector
- SULIAN**—A King
- SUNNAT**—Traditional law followed by Sunnis
- SUPARI**—The fruit of the betel palm, **ARECA CATECHU**
- SUPERINTENDENT**—(1) The chief police officer in a District (2) the official in charge of a hill station, (3) the official usually of the Indian Medical Service in charge of a Central Jail
- SURAJ SURYA**—Sun
- SURTI**—Native of Surat, specially used of persons of the dhed caste who work as house servants of Europeans and whose house speech is Gujarati Also called *Lala* or *Lalla*
- SWAMI**—A Hindu religious ascetic Also applied to Shankaracharyas, Mahants of Math, etc
- SYCH sala**—A groom
- SYED SYED**—More variations of "Said"
- TABLIQH**—The Mahomedan conversion movement
- TABUT**—See **TAFIAH**
- TAKHIL**—A revenue sub-division of a District syn. taluka, Bombay taluka, Madras and Mysore township, Burma
- TAKHILDAR**—The officer in charge of a tahsil syn. Mamlatdar, Bombay, township officer or myo-ok, Burma, Mukhtiar, Sind Vahl-vaidar, Baroda His duties are both executive and magisterial
- TAKAVI**—Loans made to agriculturists for seed, bullocks, or agricultural improvements, syn. tagal Also "Tagavi" Bombay

PAKLI—Small distaff for spinning yarn brought into fashion by Mr Gandhi.

TAL—Lake Musical time

TALAK—Mahomedan term for divorce

TALATI—Village accountant

TALAV or **talamo**—A lake or tank

TALUK, taluka—The estate of a talukdar in Oudh, Gulerat and Kathiawar. A revenue sub-division of a District, in Bombay Madras and Mysore *syn tasul*

TALUKDAR—A landholder with peculiar tenures in different parts of India. (1) An official in the Hyderabad State, corresponding to the Magistrate and Collector (First Talukdar) or Deputy Magistrates and Collectors (Second and Third Talukdars), (2) a land holder with a peculiar form of tenure in Gujarat

TALPUR—The name of a dynasty in Sind

TAMAKHT TAMHAKT—Tolacco

TAMASHA—Lobartainment gala In nautical name exhibition

TAMBU—Tent in the Bombay Presidency

TAMTAK tumtum—A North Indian name for a light trap or cart

TANK—In Southern, Western, and Central India, a lake formed by damming up a valley, in Northern India, an excavation holding water

TANZIM—Literally organization. A movement among the Mahomedans which aims at securing better education and a closer approach to unity among Mahomedans in India

TARENDAR—See **PATWARI**

TARAI—A moist swampy tract, the term especially applied to the tract along the foot of the Himalayas

TARI toddy—The sap of the date, palmyra, or coconut palm used as a drink, either fresh or after fermentation. In Northern India the juice of the date is called *Sandhi*

TASAR, tusore—Wild silkworms, *ANTHRAXA PAPHA*, also applied to the cloth made from their silk

TALUL—Brush wood fence or hurdle

TAKIA—Leth and paper models of the tombs of Hasan and Husain carried in procession at the Muharram festival, *syn tabut*

TAKL—A valuable timber tree in Southern and Western India and Burma, *TECTONA GRANDIS*.

TELEGRAPHIC TRANSFERS—See Council bills.

THAGI, thuggee—Robbery after strangulation of the victim

THAKUR—(1) The modern equivalent of the caste name *Kshatriya* in some parts of Northern India, (2) a title of respect applied to Brahmins, (3) a petty chief, (4) a hill tribe in the Western Ghats

THAMIN—The brow-antlered deer, Burma *CERVUS ELDI*

THANA—Military or Police-Station hence the circle attached to it

TID or **TIR**—Locust

TIKA—(1) Ceremonial anointing on the forehead, (2) vaccination

TIKA SARIN—Heir-apparent in several North Indian States

TIKAM—The English pickaxe (of which the *Dikass* is the common corruption of *Tikam* is derived in dictionaries from *Tikama*—Sharp)

TIH—An oilseed, *SERANUM INDICUM*, also known as gingelly in Madras.

TILAK—(Short a) the caste mark on the forehead among Hindus

TINDAL, tandel—A foreman, subordinate officer of a ship

TIPAI, Teapoy—A table with 3 legs, and hence used of any small European style table

TITAR—Partridge

TOLA—A weight equivalent to 180 grains (troy).

TONGA—A one or two horsed vehicle with a covered top *syn SIGHRAM*

TOTL—The word invariably used in South Indian planters to describe their estates. It is derived from the *Tamara* *thota* and similar words in *Jamal* and *Mekhalam* meaning an estate

TRUNK—Wild cattle found in Burma and to the southward, *BOE GONDALOUS syn. haling and banteng*

TUMKANDAR—A Persian word denoting some Office

ULANA SINGULAR ALUN—Mahomedan learned man

UMARA—Term implying the Nobles collectively. Plural of *'Amir*

UMBAR—A wild fig—(*FICUS BLOMBERATA*)

UMEDWAR—A hopeful person, one who works without pay in the hope of gaining a situation, anyone who aspires to soar

URTI—A term in famine administration denoting one person relieved for one day

URDU—Hindustani language as spoken and written by Mussalmans opposed to Hindi, spoken and written by Hindus

URIAL—A wild sheep in North Western India, *OVIS VIGORI*

URID, URID—A pulse, black grain' (*PHASEOLUS MUGGO*)

URUS—Mahomedan fete held in connexion with celebration at the tomb of a saint

USAR.—Soil made barren by saline effluence, Northern India

USTAD.—Master teacher, one skilled in any art or science

VARIVATDAR.—Officer in charge of a revenue sub-division with both executive and magisterial functions, Baroda, sru tahsildar

VAID or **Baidya** (is also a caste in Bengal).—A native doctor practising the Hindu system of medicine

VAKIL.—(1) A class of legal practitioners, (2) an agent generally

VEDA.—Revealed sacred books of Hindus

VEDANTA.—The philosophy of the Upanishads

VIHARA.—A Buddhist monastery

VILLAGE.—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish

VILLAGE UNION.—An area in which local affairs are administered by a small committee

WAAZ.—Mahomedan sermon

WADA or **WADI**.—(1) An enclosure with houses built round facing a centre yard, (2) private enclosed land near a village

WAKF.—A Muhammadan religious or charitable endowment

WALI.—Like "Sardar" The Governor of Khelat is so termed whilst the Chiefs of Kabul are both Wali and Mir

WAO.—A step well

WATAN.—A word of many senses In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Government or to the village community

WAZIR.—The chief minister at a Mahomedan court

WAT RATA.—The rate of revenue for land assured of irrigation

WRITER.—South Indian equivalent of *babu*

YAMA.—Hindu god of death

YOGA.—A system of Hindu philosophy Practices of breath control etc, said to give supernatural powers

YOGI.—A Hindu ascetic who follows the yoga system a cardinal part of which is that it confers complete control over bodily functions

YUNANI.—Lit. Greek, the system of medicine practised by Mahomedans

ZABARDAST.—Lit. Upper hand, hence strong, oppressive

ZABARDASTI.—Oppression

ZAMINDAR.—A landholder

ZAMINDARI.—(1) An estate, (2) the rights of a landholder, zamindar, (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord

ZANANA.—Of women Women's apartment, harem

ZIARAT.—Pilgrimage Ziarat-gah, any shrine or tomb to which people go in pilgrimage

ZIKR.—Commemorative prayer said at the tomb of the prophet or a Mahomedan saint

ZILA.—A District

ZOR-TAKHRI.—Tribute paid to Junagadh Durbar by numerous Kathiawar States

ZULM ZULUM.—Tyranny, Oppression

The Peoples of India.

It is essential to bear in mind, when dealing with the people of India, that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical types of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North West by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the North East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Hiley (Caste, Tribe and Race, Indian Census Report, 1901, the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 4) into seven main physical types. There would be eight if the Andamanese were included, but this tiny group of Negritos may be disregarded.

The Turko-Iranian, represented by the Baluch, Turakul and Afghans of Baluchistan and the North West Frontier Province. Probably formed by a fusion of Turki and Persian elements in which the former predominate. Stature above mean complexion fair, eyes mostly dark but occasionally grey, hair on face plentiful, head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentous length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir and having as its characteristic members the Rajputs, Khattis, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall, complexion fair, eyes dark, hair on face plentiful, head long, nose narrow, and prominent but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight, in the lower Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani, found in the United Provinces, in parts of Raj-

putana and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture in varying proportions, of the Indo-Aryan and Dravidian types. The head form is long with a tendency to medium, the complexion varies from lightish brown to black, the nose ranges from medium to broad being always broader than among the Indo-Aryans, the stature is lower than in the latter group and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one yet its characteristics are readily definable and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type is the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian, or Bengali type of Lower Bengal and Orissa, comprising the Bengali Brahmans and Kayasthas, the Mahomdians of Eastern Bengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad, complexion dark, hair on face usually plentiful, stature medium, nose medium, with a tendency to broad. This is one of the most distinctive types in India and its members may be recognized at a glance through out the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east and probably includes the bulk of the population of Orissa, the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid type of the Himalayas, Nepal, Assam, and Burma, represented by the Kanets of Lahul and Spiti, the Lepchas of Darjeeling and Sikkim, the Limbus, Mursis and Gurungs of Nepal, the Bodos of Assam, and the Burmese. The head is broad, complexion dark, with a yellow tinge, hair on face scanty, stature short or below average, nose fine to broad, face characteristically flat, eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristic representatives are the Panjyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean, the complexion very dark, approaching black, hair plentiful, with an occasional tendency to curl, eyes dark, head long, nose very broad, sometimes depressed at the root, but not so as to make the face appear

lat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest clad ranges, turreted plateau, and undulating plains which stretch roughly speaking, from the Vindhya to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is nonterminous with the Gange while further north it reaches on one side to the Aravalli, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo Aryan or Mongoloid people, the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, of Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Bangoon and Singapore, he is recognisable at a glance by his black skin, his

squat figure, and the negro-like proportion of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

The areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly and although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

MAIN STATISTICS OF THE INDIAN EMPIRE

The Indian Empire has an area of 1,805,332 square miles, about 3,000 square miles being added at the last census owing to the enumeration by estimate of certain tracts in Burma which had been excluded from previous censuses.

Of this total area 1,094,800 square miles, or 61 per cent lie in British Territory, while the Indian States cover an area of 711,032 square miles, or 39 per cent. The total population is 318,942,480, British Territory containing 247,003,293 persons, or 77 per cent and the Indian States 71,939,187 persons, or 23 per cent of the whole population. It is usual to illustrate

these figures by comparison with the countries of Europe and in respect of area and population the Indian Empire has been frequently compared to Europe without Russia. The war has however, considerably altered the national and political distribution of countries and the new political map of Europe is perhaps hardly yet sufficiently familiar to form a graphic contrast. Turning further west we find that India with an area about half that of the United States has a population almost three times as large.

The most important statistics are set out in the following table—

	India	British Provinces	Indian States
Area in Square Miles	1,805,332	1,094,800	711,032
Number of Towns and Villages	637,931	500,088	137,893
(a) Towns	2,316	1,561	755
(b) Villages	635,665	498,527	137,138
Number of Occupied Houses	65,198,389	50,441,636	14,756,753
(a) In Towns	6,765,014	5,046,820	1,718,194
(b) In Villages	58,433,375	45,394,816	13,038,559
Total Population	318,942,480	247,003,293	71,939,187
(a) In Towns	32,476,276	25,044,368	7,430,908
(b) In Villages	286,467,204	221,958,925	64,508,279
Males	163,995,554	123,872,116	37,123,438
(a) In Towns	17,845,248	13,971,136	3,874,112
(b) In Villages	146,150,306	112,900,980	33,249,326
Females	154,946,926	123,131,177	34,815,749
(a) In Towns	14,630,028	11,073,232	3,556,796
(b) In Villages	140,316,898	109,057,945	31,258,953

Density.—Over the whole of India the population per square mile averages 177, the mean density in the British Provinces being 226 and in the States 101. If the districts (and small States) are taken as a unit and the cities are excluded the mean density ranges between a minimum of 1 and a maximum of 1,832 per square mile. The unequal distribution of the population of India is due to causes analysed in previous editions of the Year Book, it is chiefly dictated by physical conditions. Other influences are at work, such as the state of law and order, the means of communication, climate, and the existence of irrigation. Industrial factors are becoming more and more important as the population moves out of the congested rural tracts to supply the labour needed for industrial enterprise—for the tea in Assam

the docks and jute mills of Calcutta, the mineral of Bengal and Chota Nagpur the cotton of Bombay and the coffee and rubber of Southern India. For the purposes of comparison the manner in which this population is distributed in other countries of the world is indicated in the following statement —

Belgium	654
England and Wales	649
France	184
Germany	332
The Netherlands	544
Austria	199
Spain	107
Japan	215
United States	32
New Zealand	1 18

MOVEMENT OF THE POPULATION

The population of India has increased by 1·2 per cent during the decade. The figures of previous censuses with the variations per cent are given below. The average increase since the census of 1872 falls at a rate of 5·5 per cent., but the real gain is considerably less than this figure owing to two factors, (a) the additions of area and population included at each census and (b) the progressive increase in the accuracy of the enumeration from census to census. So far as the present census is concerned the additional area and population included amount to 2,675 square miles and 86,583 persons, respectively, while for the present purpose it may be taken that the enumeration of 1921 was, as regards numbers, as accurate but not more accurate than that of 1911. The real increase in the population during the last 49 years is thus estimated at about fifty four millions or 29·1 per cent.

Census of	Population	Variation per cent since previous census
1872	206,162,960	—
1881	258,696,330	+23·2
1891	287,314,671	+18·2
1901	294,381,056	+2·5
1911	315,156,396	+7·1
1921	318,942,480	+1·2

Factors in the Movement.—The increase was slightly greater in the British districts (1·3) than in the States (1·0). Assam and Burma show comparatively high rates of increase, immigration is an important factor in the rise in Assam, but neither of these Provinces was exposed to the invasion of influenza which wiped out the whole of the natural increase in the Central Provinces and Berar, Bihar and Orissa, and Bombay, and substantially reduced the population in the United Provinces and Rajputana, the Central India Agency, and Hyderabad State. The stimulus given to agricultural property in the Punjab by a large expansion of canal irrigation did much to neutralise the effects of the high death rate in 1918. In Bengal

and Madras unhealthy conditions were more localised and the development of the population was only partially retarded.

The War.—The war itself had little direct effect on the population of India. Such effect could operate in three ways (1) by death casualties (2) by increasing the number of persons outside India at the census, and (3) by decreasing the birth rate. The actual number of death casualties among the officers and ranks of Indian Army units and labour corps was 88,238. The maximum number serving out of India in combatant and labour units at any one time between 1914 and 1919 was, approximately, Indian troops 250,000, labour corps 230,000, total 480,000 the number about the time of the census being troops 105,000, labour corps 20,800, total 125,800. So far as the larger totals are concerned the war is not a direct factor of any importance in the census in any province.

Economic Conditions.—In considering the economic factors which determined the movement of the population during the decade it can be divided into two periods, a fairly normal period from 1911 to 1917 and the disastrous epidemic year 1918, accompanied by scarcity and followed by a second crop failure in 1920. In 1917 conditions in India began to respond to the world conditions of the war, men for the fighting and labour units and food, munitions and war material of all kinds were demanded. The strain on the railway organisation dislocated the local markets and the distribution system of the country was impaired. The rising prices of imported necessities hit the poorer classes. Then followed the disastrous seasons of 1918 and 1919. Famine relief organisation is now so highly perfected in India that scarcity is not necessarily accompanied by high mortality but influenza, starting in 1918, visited almost every portion of the country and in a few months wiped out the natural increase in the population of the previous seven years.

Public Health.—The distinctive feature of the decade 1901-1911 was plague. The recorded number of deaths from plague in the ten years was 64 millions. In the recent decade the deaths were less than half that number. Cholera is normally most prevalent in the Eastern Provinces.

Virulent as the epidemic can still be when its hold is established it is now usually of a temporary and local nature, and the total death rate in British India from the disease during the decade did not amount to more than 1.6 per cent. By far the largest number of deaths in India are entered under the category of fever, and allowing for inaccuracy of diagnosis it has usually been assumed that about two thirds of the deaths so recorded may be ascribed to malaria. Recent investigations made in special areas however, suggest that this proportion has been considerably over-estimated and that malaria only accounts for from one fifth to one fourth of the number of reported fever cases the remainder being cases of dysentery, pneumonia, phthisis and other diseases.

In the last few years the prevalence of an affection which is the cause of considerable mortality called *Relapsing Fever* has received considerable attention by the Health Department. This disease has been diagnosed as common in most parts of the country, specially in the northern provinces and in the Central Provinces and Berar and Bombay, but the extent of the mortality which can be ascribed to it cannot at present be estimated. Nor can figures be given of phthisis which is undoubtedly responsible for considerable mortality especially in the towns of western India, the deaths from this disease in Ahmedabad amounting in 1918 to 5 per mille of the population. All other factors in the health of the people have been overshadowed by the influenza epidemic of 1918 and 1919 which has dominated the population figures at the 1921 census.

Influenza.—The influenza epidemic of 1918 invaded India in two distinct waves. The first infection apparently radiated from Bombay, but it is impossible to say where the more virulent virus of the second invasion came from.

The rural areas were most severely infected the reason probably being that while villages have little advantage over towns in the matter of overcrowding, sanitation and ventilation the urban areas have the benefit of qualified medical aid and organised effort. Mortality was especially high among adults (20-40), particularly among adult females the disease being generally fatal to women in pregnancy. At the worst period whole villages were absolutely laid desolate by the disease. There was sometimes no means of disposing of the dead, crops were left unharvested and all local official action was largely paralysed owing to the fact that the majority of the official staff were put out of action by the epidemic. To add to the distress the disease came at a period of widespread crop failure and reached its climax in November when the cold weather had set in, and, as the price of cloth happened at the time to be at its highest, many were unable to provide themselves with the warm clothing that was essential in the case of an illness that so readily attacked the lungs. The disease lasted in most provinces well into 1919 and gave a high mortality in that year in Bengal and the United Provinces. Even after it had subsided there were in the Central Provinces, Bombay and Burma mild recrudescences later in the year, while local outbreaks continued over the country during the next two years.

There is no direct means of ascertaining the mortality from the epidemic. Various estimates have been made based on the excess mortality over some suitable mean. The average of these calculations gives a total number of deaths in the areas under registration of about 7,100,000 in 1918, to which must be added, as the results of similar calculation, another 1½ million deaths in 1919 giving a total recorded mortality of nearly 8½ millions in the two years. Even this, however, must be a substantial under-estimate since, owing to the complete breakdown of the reporting staff the registration of vital statistics was in many cases suspended during the progress of the epidemic in 1918.

The total influenza mortality for India is put at between 12 and 13 millions. This is a conservative estimate. Even this estimate makes the influenza mortality, a large part of which occurred in three or four months, exceed by nearly two millions the total estimated deaths from plague in twenty years. On an estimated case mortality of ten per cent the total number of persons affected was 125 millions or two fifths of the population of India. There was a further reaction on the birth rate.

Houses and Families.—The average number of persons per house has not changed in the last decade though there was a decline between 1881 and 1911. The trend of the figures varies in different provinces but they do not afford substantial ground for any material inference. It would, for example, be expected that the incidence of the influenza mortality would fall fairly evenly upon the individual households and would therefore cause a reduction in the number of persons per house. It does not appear to have done so either in Bombay, the United Provinces, the Central Provinces, or Rajputana, while in Bengal, where there is a rise in the population, there is a fall in the size of the household. The figures are unsatisfactory, and though they invite a discussion on the condition of the joint family it is doubtful if they can really be held to illuminate it. The general opinion of the Provincial Superintendents is that they do not do so and that other indications do not show that the joint family system has yet undergone any radical change, at any rate in the agricultural tracts of the country.

Census	Persons per house	Houses per square mile
1921	4.9	36.1
1911	4.9	35.8
1901	5.2	31.6
1891	5.4	33.9
1881	5.3	31.7

NOTE—

- (1) The figures for the Provinces are inclusive of the States attached to them except in the case of Madras where they exclude Cochin and Travancore
- (2) The Actual and Natural population shown in this table is less by 26 500 persons owing to the exclusion of Aden where Table XI was not compiled
- (3) Columns 2 and 6—Persons not enumerated by birth place or whose birth place was not returned have been included in these columns
- (4) Columns 4 and 8—The figures against India in columns 4 and 8 represent emigrants to foreign countries details of which for 1921 will be found in Subsidial Table V of Chapter III

Future Population of India.—A study of the growth of the population of India and the problems which it presents is vitiated by the abnormal conditions of the past decade. It was pointed out in the census report of 1911 that the rate of increase of population between 1872 and 1911 was equivalent to about 19 per cent., and that at this rate the population would double itself in about a century and a half. The real increase in the last fifty years in the population of India is just over 20 per cent. At this rate the doubling will take another 190 years. But calculations of this kind, though of interest, can hardly be taken seriously. Almost every one of the last five decades has witnessed some special disaster. A severe famine in South India checked the increase in the decade 1872-1881. The decennium 1881-1901 was dominated by the great famines of the closing period. Growth in North and Western India was checked in the succeeding decade by plague and we have had in the past decennium an epidemic which has caused more concentrated mortality than any previous calamity. The decade 1881-1891 alone

was free from any exceptional calamity and is usually considered a period of fairly normal progress.

Difference between the birth rate and death rate estimated by the actuary for certain provinces in certain decades

Province	1881-1891	1901-1911
Bengal	7.0	7.3
Bombay	18.9	5.2
Barma		11.1
Madras	13.3	8.5
Punjab	9.3	5.7
United Provinces	6.5	0.6
Combined Provinces		8.2

TOWN AND COUNTRY

The progress of urbanisation in India—if there has been any progress at all—has been very slow during the past thirty years, the whole increase being less than one per cent. An examination of the statistics shows that whilst towns with populations above 50,000, increased by over 16 per cent. in the decade, the increase was considerably less in those

between 5,000 and 50,000 whereas the population of towns between 10 to 20 thousand did not keep abreast of the progress of the general population of the country. The statistics reveal the gradual decadence of the medium-size country towns and the growth of the larger cities under the influence of commercial and industrial development.

**DISTRIBUTION OF POPULATION IN GROUPS OF TOWNS ACCORD-
ING TO SIZE AND IN RURAL TERRITORY**

Class of places	1931		1921
	Places	Population	Per cent
Total Population	687,935	316,017,751	100.0
Urban Territory	2,313	32,418,776	10.2

Peshawar and Cantonment	104,452	34,317	349	+ 4.7
Bawalpindi and Cantonment	101,142	11,802	532	+17.0

In these statistics the population of Calcutta is taken as embracing the suburbs, and this method is apparently adopted in dealing with Calcutta only. It is not, for instance, adopted in dealing with the considerable suburbs of Bombay just outside the limits of the Island. The actual population of Calcutta within the Municipal area is 866,616.

Migration.—Of the population of the Indian Empire only 603,526 were enumerated as born in other parts of the world. Of these about four fifths came from other Asiatic countries, such as Nepal, Afghanistan, China, Siam, Ceylon, and Arabia and the remainder mostly from Great Britain and other countries of Europe. The emigration from India is approximately 17 million, so the numbers who move between India and other countries is about two millions. Of the total immigrant population of 707,000 in Burma 573,000 are Indians, 102,000 Chinese, representing 80 and 15 per cent respectively of the whole number. Of the Provinces which contribute most largely to the streams of immigrants the most conspicuous are Bihar and Orissa about 1½ million, the United Provinces about 1 million, Madras ¾ of a million, Rajputana 3-5th of a million and Hyderabad 1-4th of a million. The number of persons resident in India who were born outside the Indian Empire is 603,526 and of these 274,000 were born in Nepal, 116,000 in the British Isles, 108,000 in China and 48,000 in Afghanistan.

The statistics of emigration outside India are far from complete.

The number of Indians belonging to regiments and labour-corps outside India at the time of the census was about 125,000. Of these the majority were probably in Mesopotamia and Palestine. According to the returns

the number of Indians in the colonies, irrespective of birth-place, amounts to 1,682,000 of whom 1,028,000 or about two-thirds are males. More than four fifths are Hindus and about half of the remainder are Mussalmans. The colonies which attract an appreciable number of emigrants are shown below. About one-ninth of the emigrants failed to specify their province of birth, and of the remainder no less than 841,000 or 80 per cent were from Madras, 21,000 from Bombay, 18,000 from the Punjab, 17,000 from the North West Frontier Province and 11,000 from Bengal. The majority of the emigrants work as agricultural labourers on rubber, tea, coffee and other plantations. Under the Defence of India Bales indentured labour emigration was stopped in March 1917, but there had been a considerable outflow of labourers to the colonies in the previous years and more than 2½ millions of natives of India passed through the ports of Madras and Calcutta as indentured labourers for the various colonies during the decade. Of the labourers 83,000 went from Calcutta, but the bulk were from the Madras Presidency and their destination was Ceylon and the Straits Settlements. There is very little emigration from the ports of Bombay and Karachi. Altogether about two million labourers returned to India from the colonies during the decade.

RELIGIONS.

The subject of religion is severely controversial in India, where often it is coloured by politics and racialism. As the Year Book aims at being impartial, all disputed inferences are excluded. Speaking broadly of every hundred persons in the Indian Empire 63 are Hindus, 22 Mahomedans, 3 Buddhists, 3 follow the religion of their tribes, one is a Chris-

tian and one a Sikh. Of the remaining 2 one is equally likely to be a Buddhist or a Christian, and the other most probably a Jain, much less probably a Parsi and just as possibly either a Jew, a Brahmo, or a holder of indefinite beliefs. The enumerated totals of the Indian religions are set out in the following table—

Religion	Actual number in 1921 (000's omitted)	Proportion per 10,000 of population in 1921	Variation per cent (Increase + Decrease -)
Indo Aryan	232,723	7,342	+ 1
Hindu	216,735	6,856	+ 4
Brahmanic	216,361	6,841	+ 5
Arya	463	15	+ 92 1
Brahmo	6	2	+ 16 1
Sikh	3,239	103	+ 7 4
Jain	1,173	37	+ 5 6
Buddhist	1,571	366	+ 7 9
Iranian (Zoroastrian (Parsi))	103	3	+ 1 7
Semitic	73,511	2,325	+ 4 2
Mussalman	68,735	2,174	+ 5 1
Christian	4,764	150	+ 22 6
Jew	23	6	+ 8 8
Primitive (Tribal)	9,775	309	+ 5 1
Miscellaneous (Minor Religions and religions not returned)	18	1	- 51 5

The Hindus largely predominate in the centre and south of India, and in the Madras Presidency they are no less than 89 per cent of the population. Hindus are in the majority in Assam, Bihar and Orissa, the United Provinces, the Central India tracts, Rajputana and Bombay. Muhammadans monopolise the North West Frontier Province, Baluchistan and Kashmir and are considerably in excess in the Punjab and Eastern Bengal and Sind. They form about 28 per cent of the population of Assam, 14 per cent in the United Provinces and 10 per cent in Hyderabad. The Buddhists are almost entirely confined to Burma where they are 85 per cent of the population. The Sikhs are localised in the Punjab and the Jains in Rajputana, Ajmer Merwara and the neighbouring States. Those who were classed as following Tribal Religions are chiefly found in Bihar and Orissa, the Central Provinces and Assam but Bengal, Burma, Madras, Rajputana, Central India and Hyderabad also returned a considerable number under this head. More than three fifths of the total number of Christians reside in South India including the Hyderabad State. The remainder are scattered over the continent,

the larger numbers being returned in the Punjab, the United Provinces, Bengal, Bihar and Orissa, Burma, Bombay and Assam. The Parsis and Jews are chiefly residents of the Bombay Presidency.

Christians.—The Christian community now numbers just 4½ millions of persons in India or 1½ per cent of the population. Fifty-nine per cent of Christians are returned from the Madras Presidency and its States, and the community can claim 32 persons in every 1,000 of the population of the British districts of Madras and as large a proportion as 27 per cent in Cochin and 29 per cent in Travancore, where the increase during the decade was about 30 per cent. Elsewhere the Christians are scattered over the larger Provinces and States of India, the Punjab and Bihar and Orissa each having over 300 thousands. Bombay, Burma and the United Provinces between 200 and 300 thousands and Bengal and Assam between 100 and 150 thousands. Divided racially Europeans (and allied races) number 176 thousands, Anglo Indians 113 thousands and Indians nearly 4½ millions so that out of every 100 Christians 93 are Indians, 4 are Europeans and 3 are Anglo Indians.

AGE AND SEX

The figures of the total population of India are not tabulated by annual age periods but the table below gives the age distribution of 10,000 males and females in the Indian population

Age-group	1921		1911	
	Male	Female	Male	Female
0-5	1,202	1,316	1,327	1,433
5-10	1,471	1,494	1,383	1,383
10-15	1,246	1,081	1,165	907
15-20	842	815	848	826
20-25	775	681	822	930
25-30	865	885	896	909
30-35	823	833	829	835
35-40	686	595	622	556
40-45	621	621	684	631
45-50	392	345	380	328
50-55	434	438	432	443
55-60	185	198	177	164
60-65	266	298	257	305
65-70	81	79	89	75
70 & over	160	180	145	175
Mean age	24.8	24.7	24.7	24.7

In the whole of British India the infant death rate amounts to about one fifth of the total death rate for all ages and about one fifth of the children die before the age of one year. The ratios of deaths vary in different provinces the birth rate being an important factor. Thus they are especially high in the United Provinces and Central Provinces where the birth rate is high and low in Madras which has a lower general birth rate. The recorded rates in some of the cities are phenomenally high but may owing to the defective reporting of births be somewhat exaggerated.

Special causes contribute to the high mortality of infants in India. Owing to the custom of early marriage cohabitation and child birth commonly take place before the woman is physically mature and this, combined with the primitive and insanitary methods of midwifery seriously affects the health and vitality of the mother and through her of the child. Available statistics show that over 40 per cent of the deaths of infants occur in the first week after birth and over 60 per cent in the first month. If the child survives the pre-natal and natal chances of congenital debility and the risks of child birth, it is exposed to the dangers of death in the early months of life from diarrhoea or dysentery.

Infant mortality in Cities

Bombay	556
Calcutta	386
Rangoon	303
Madras	282
Karachi	249
Delhi	233

Sex Ratio.—In the whole of India there is an excess of males over females, the figures being 945 females per thousand males. These results being opposed to experience in most other countries of the world have been challenged and attributed to errors in the Indian census. This reasoning is rejected by the Census authorities, who insist that the disparity between the sexes is due to special conditions in the Indian Empire. The sex ratio has fallen in the last twenty years throughout India. The statistics of birth suggest that the proportion of females born to males born has if anything, declined during this period, and in any case there has been a marked decline in the last five years of the last decade in most provinces. The decline in the proportion of women however is chiefly due to (a) the absence of famine mortality which selects adversely to males and (b) the heavy mortality from plague and influenza which has selected adversely to females.

Marriage.—The subject of polygamy has been discussed fully in the report of 1911. Both Hindus and Muhammadans are allowed more wives than one Muhammadans being nominally restricted to four. As a matter of practice polygamy is comparatively rare owing to domestic and economic reasons and has little effect on the statistics. The table shows the number of married women per 1,000 married men in India and the main provinces. No definite conclusions however can be drawn from these figures because (1) they probably contain a certain number of widows divorcees and prostitutes who have wrongly returned as married and (2) it is impossible accurately to gauge the effect of migration on the figures of the married in any area. The custom of polyandry is recognized as a regular institution among some of the tribes of the Himalayas and in parts of south India. It is also practised among many of the lower castes and aboriginal tribes. Its effect is reflected in the statistics of a few small communities such as the Buddhists of Kashmir where the proportion of married women to married men is exceptionally low, but otherwise the custom is of sociological rather than of statistical interest.

Number of married females per 1 000 males

India	1 006
Assam	976
Bengal	966
Bihar and Orissa	1,034
Bombay	987
Burma	924
C P and Berar	1,034
Madras	1 061
Punjab	1 021
United Provinces	1,013

Widows.—The proportion of widows in the population, viz., 6.4 per cent., does not differ widely from the figure for European countries, but the number of widows is strikingly

large. The large number of Indian widows is due partly to the early age of marriage, partly to the disparity in the ages of the husbands and wives but chiefly to the prejudice against the remarriage of widows. The higher castes of Hindus forbid it altogether and as the custom

is held to be a mark of social respectability many of the more ambitious of the lower castes have adopted it by way of raising their social status while Muhammadans who are closely brought into touch with their Hindu neighbours are apt to share the prejudice.

Proportion of widows in the population per 1,000

Age	India, 1921	England and Wales, 1911	Age	India, 1921	England and Wales, 1911
All ages	176.0	73.2	20—25	71.5	1.5
0—5	7		25—35	146.9	13.1
5—10	4.5		35—45	325.2	50.5
10—15	16.8		45—55	619.4	103.3
15—20	41.4		55 and over	834.0	565.0

Early Marriage—The figures clearly show an increase in the numbers of those in the early age-categories who are still unmarried. The movement is most marked in the Hindu community but is shared by the other religions,

the change being less noticeable among the Buddhist and Christian communities who are not addicted to early marriage. This change is most conspicuous in the age-categories 10 to 15 for women and 10 to 20 for men.

SOCIAL AND ECONOMIC CONDITIONS.

Literacy—The number of persons in India literate in the sense of being able to write a letter and read the reply is 22.6 millions, amounting to children under five years of age are excluded, to 82 in every thousand of the population. Of males 139 in every thousand at age five and above are literate the corresponding proportion in the case of females being 21.

The Hindus have one literate person in every thirteen, for males the ratio is one in eight and for females one in six. The proportion of Sikh males who are literate is less than that of Hindus. One Mohammedan male in 11 and one female in 116 can read and write. The low position of Muhammadans is partly due to the fact that in Bengal the Punjab North-West Frontier Province and Sind where they predominate, they are mostly agricultural. Where they are in a minority as in the Central Provinces, United Provinces and Madras they are usually town dwellers and have a considerably higher proportion of literates. The Hindu community embraces every stratum of society and the proportion of literacy is seriously affected by the inclusion of the vast mass of the lower rural classes. Some of the higher Hindu castes have more literate males than the Parsis whilst others are on a level with or even below the aboriginal tribes.

English—In the whole of India 2.5 million persons or 190 males and 18 females in every ten thousand persons of each sex aged five and over can read and write English.

One in thirty males in Bengal and one in forty-three in Bombay are literate in English,

In Madras, Assam and Burma the proportion is 2 per cent while in Bihar and Orissa, the Central Provinces and the United Provinces it is below 1 per cent. Of the States Cochin and Travancore have between 3 and 4 per cent but in others the proportions are much lower. More than half the number of Parsi males and one-fourth of their females can read and write English. Of Christians nearly all the Europeans and many of the Anglo Indian are literate in English, but except on the southern coast English literacy is rare among the Indian Christians and the regional proportions therefore largely follow the racial distribution. Though the proportions in the other communities, taken on the total populations are small some of the higher castes have a fairly large number of English knowing members. In Bengal about half of the Baidya males and a quarter of the Brahman and Kayastha males are literate in English while in Madras more than a quarter of the Tamil Brahmans can claim this accomplishment. Of the Jains in Kathiawar nearly a tenth are literate in English though the Chaturth Jains of Kolhapur, who are cultivators, are less literate than the average of the Presidency. During the decade the number of males knowing English rose by 51 per cent and that of females by 67 per cent. Among the main Provinces the greatest progress has been made by Bengal, Assam and Bombay and in the States by Cochin, Travancore, Mysore and Baroda.

Languages—In the whole Indian Empire 222 languages were returned at the census, dialects, as has been previously explained, not having been separately considered. The

principal languages are given in the following statement —

Language	Number of speakers in (000's omitted)		Percentage in increase or decrease
	1921	1911	
Western Hindi	96,714	96,011	+ 1
Bengali	49,894	48,763	+ 2
Telugu	25,601	23,443	+ 2
Marathi	18,798	19,807	- 5
Tamiz	18,798	18,128	+ 4
Punjabi	16,334	15,877	+ 2
Rajasthani	12,681	14,068	- 10
Kannaree	10,974	10,426	- 1
Oriya	10,143	10,162	- 2
Gujarati	9,562	9,238	+ 3
Burmese	8,423	7,894	+ 7
Malayalam	7,498	6,792	+ 10
Lahnda or Western Punjabi	5,652	4,779	+ 18

The necessity of a common medium of conversation and intercourse which has given rise to bilingualism and the consequent displacement

of tribal languages, has formed the subject of a considerable amount of discussion and suggestion during the last decade and a good deal has been written on the possibility of a *lingua franca* for India. The combined speakers of Eastern and Western Hindi considerably exceed in number the strength of any other individual language in India, and if we add to these two languages Bihari and Rajasthani, which so resemble Hindi as to be frequently returned under that name in the census schedules we get well over 100 millions of speakers of tongues which have some considerable affinities and cover a very large area of northern and central India. In their pure forms these four languages may be scientifically distinct but this is not the popular view. There is a common element in the main languages of northern and central India which renders their speakers with out any great conscious change in their speech mutually intelligible to one another and this common basis already forms an approach to a *lingua franca* over a large part of India.

Infirmities.—These are classes under four main heads—insanity, deaf mutism, blindness and leprosy. The appended statement shows the number of persons suffering from each infirmity at each of the last five censuses and the proportion per hundred thousand of the population —

Infirmity	NUMBER AFFLICTED WITH EACH PER HUNDRED THOUSAND OF THE POPULATION				
	1921	1911	1901	1891	1881
Insane	88,305	81,006	66,205	71,279	81,132
	28	26	23	27	45
Deaf mutes	189,644	199,891	153,168	196,861	197,215
	60	64	52	75	86
Blind	479,837	443,603	374,104	459,963	526,748
	152	142	121	167	229
Lepers	102,513	109,094	97,310	124,244	131,948
	32	35	33	46	57
TOTAL	860,099	833,644	670,817	856,252	937,083
	272	267	229	315	407

There had been a continuous decline in the total number as well as in the proportion of persons recorded as afflicted up to 1901. This fall has been ascribed, partly, to a progressive improvement in the accuracy of the diagnosis and, partly, to an actual decrease in the prevalence of the infirmities, owing to the improvement in the material condition of the people to better sanitation and (especially in the case of blindness) to the increasing number of cures effected with the aid of modern medical and surgical science. In the decade ending 1901 the relatively high mortality of the afflicted in the two severe famines must have been a considerable factor in the decline shown at that census, but the method of compilation adopted in 1901 and in the previous census was defective, and, certainly in 1901, many of the persons

afflicted must have escaped notice in the course of tabulation. Compared with the year 1891 there was a slight decrease in the total number of persons recorded as afflicted in 1911, the proportion per hundred thousand persons falling from 315 to 267. The small increase in the present decade, amounting to 26,455 persons or one per 100,000 may be due to improvement in record and tabulation but is certainly unexpected.

Caste.—The enormous complexity of the caste system makes it impossible to give more than the briefest results here. The curious must be referred to the extensive literature on the subject and to the whole chain of census reports where it is discussed in various aspects. All we can do here is to give the census figures of the main castes with a comparison with 1911,

Variation in certain main castes

There has been much discussion of recent years of the position and numbers of The Depressed Classes—a term which has never been accurately defined but which may be described as the classes outside the pale of

Hindu Society. Their numbers are given in the census as between 55 and 60 millions.

The main figures of Europeans and Anglo-Indians are given below—

Province, State or Agency	European and Allied Races in 1921			Total European and Allied Races in 1911	Anglo-Indians	
	British Subjects	Others	Total		1921	1911

OCCUPATIONS

India is essentially an agricultural country and agriculture proper supports 234 millions of persons or 71 per cent of the population of the Empire. If we add the pastoral and hunting occupations the percentage rises to 73, while a considerable proportion of the unfortunate large number of persons in the category of vague and unclassifiable occupations are probably labourers closely connected with the occupations of the land. Industries support 10 per cent of the population, but the bulk of these are engaged in unorganised industries connected with the supply of personal and household necessities and the simple implements of work

Organized industries occupy only 1 per cent of the people. In trade and transport on which less than 6 per cent and 2 per cent, respectively, depend a not inconsiderable number are connected with the disposal of the various kinds of agricultural products. The administration and protection of the country engage only 4 825 479 persons or 1½ per cent of the population, and the remainder are supported by domestic, miscellaneous and unproductive occupations. Though the extent to which agriculture predominates in individual provinces varies, there is no region in which it does not in some form easily take the first place.

In spite of the trade of Calcutta and the numerous industrial and mining concerns of Bengal and Bihar and Orissa the population of the eastern provinces is overwhelmingly agricultural and contains a higher percentage of persons supported by the land than any other tract of India. Of industrial workers the largest proportions in the local population are in the Punjab the United Provinces and Bombay. Of these three provinces however agriculture dominates the economic life of the first two where the industrial occupations though they engage a substantial number of persons are mostly of the cottage industry type. In Bombay the development of organized industry is of some economic importance but is at present largely confined to a few of the biggest cities. In the category of unclassified occupations the majority of persons are labourers whose particular form of labour is unspecified and the rest mostly unspecified clerks.

Compared with 1911 the agriculturists have increased a little faster than the total population, though fishermen and hunters are fewer. Miners have risen in number with the recent expansion of the industry. Industries have substantially decreased and of the principal forms of industry the textile workers have dropped considerably, as also have potters and workers in wood and metal. An increase under transport by rail is countered by a drop under transport by road. Trade has increased, trade in textiles showing a slight rise and trade in food a slight drop. The number employed in public administration is practically stationary, but the army has risen while the police has fallen heavily. Law and medicine have gained at the expense of religion and though instruction has spread letters have fallen. Beggars are fewer and domestic servants as many. Beggars and vagrants, the raw material of crime and disease, have decreased but criminals the finished article, have risen in numbers.

Occupation or means of livelihood.

All others	14,831,923

NOTE.—Occupation was not recorded for 2,337,249 persons.

Collieries.—Of a total of 288 thousand supported by collieries 205 thousand are actual workers. The most important coal mines lie in the provinces of Bihar and Orissa and Bengal. The Jherria coal-field in Manbhum the importance of which is due to its accessibility and the superior quality of its coal alone produces over fifty per cent of the total annual output of coal in India. According to the industrial census the total population employed in the coal mines of Manbhum was 82,619, of whom 747 were managers, 1,519 belonged to the supervising and technical staff and 1,432 to the clerical staff, while 32,843 were skilled and 46,423 unskilled workers.

Textiles—Cotton.—Of the industries the textile industries are by far the most important the number of persons occupied in industries connected with cotton being returned as 872,000 or just three quarters of the whole number of those supported by textile industries.

The bulk of the organized establishments are in the western tracts, where the large cities owe a considerable portion of their prosperity to the development of the textile industries and the cotton-growing country is covered with mechanically worked gins and presses for the preliminary treatment of the raw material. Of the 2,037 establishments connected with cotton manufacture, employing in all 434,000 persons, no less than 737 establishments, with 277,000 employees or 64 per cent of the personnel belong to the western Presidency and its States.

Jute.—The spinning, pressing and weaving of jute support a population of 493,000, as compared with 342,560 ten years ago. There are a few mills and presses in Assam, Bihar and Orissa and Madras but the industry is practically confined to Bengal.

Nature of Ownership.—Of the total number of 15,606 establishments 677 are owned by Government 3,292 by registered companies and 11,637 by private persons. The Government owned concerns are mostly railway and engineering workshops and other concerns such as brick and tile factories connected with the construction of roads and building and printing presses. The tea and rubber plantations are mostly the property of companies. Out of the 795 tea plantations in Assam 632 belong to companies. On the other hand the coffee plantations of Madras, which are much smaller concerns than the tea gardens, are mostly privately owned only 23 out of 127 belonging to companies in Madras and 10 out of 242 in Mysore. The collieries are mostly company-owned, but of the 42 manganese mines of the Central Provinces half are owned by companies and half by private persons. Of the 392 cotton ginning mills in Bombay 353 are private owned, but of the cotton weaving mills 129 out of 345 are owned by companies. Similarly the jute presses are mostly private, while 60 out of the 62 jute mills of Bengal are company owned. Practically all the printing presses are private concerns, and so are a large number of the general workshops and such concerns like flour and rice mills and brick and tile works, which are mostly on a small scale. European companies own the majority of the tea gardens of

Assam and Bengal but as has already been seen Indian enterprise is growing in regard to the private ventures.

Women as Workers.—The adult women (unskilled) number 508 per 1,000 adult men and the proportion of the children of both sexes under 14 years old is 140 per 1,000 adults. By far the majority of women labourers, viz., 323 out of 540 thousand, are on the plantations where their proportion per 100 men is as high as 84, the children being 190 per 1,000 adults. Women and children are also numerous in the textile and mining industries and in the former there are 408 adult women (unskilled) per 1,000 men and in the latter 521. Nearly 30 per cent of the women employed in textile industries are recorded as skilled. About 61 per cent of the total number of children employed in organized industries are boys and the girls almost equal the boys on the plantations and in the mines and form about one-fifth of the child labour in the textile industries. In the larger industries (20 persons and above) both female and child labour has dropped since 1911 the proportion of women (unskilled) being 515 now against 561 in 1911 per 1,000 men and the proportion of children per 1,000 adults 143 against 191 in 1911. The figures vary curiously in different industries and suggest that they are not altogether trustworthy. Women have increased in the plantations and textiles and declined in the mines. Children have decreased in the plantations and textiles and increased in the mines. Both women and children find considerable employment in the establishments connected with glass, pottery, cement and building and to a less extent in those of food and dress.

Occupation of Europeans.—Of the 103,405 male Europeans 63,538 are in some capacity to the category of Public Force, i.e., the Army, Navy, Air Force and Police over 9,000 to Transport, i.e. largely railway officials and about 6,000 to Public Administration, 4,800 to Mines and Industries, 5,900 to professions, 4,800 to trade while there are about 4,300 imperfect entries a number which together with the known deficiency in the census of Europeans generally somewhat detracts from the value of the details. The abnormal constitution of the foreign European population is exhibited by the small number of dependants viz. 82,000 as against 121,000 workers whereas the number of Anglo-Indian dependants is just about double the number of their workers. Nearly one-third of the Anglo-Indian males are employed on Transport, i.e. chiefly Railway, and the remainder mostly find employment as clerks and upper subordinates.

The Next Census.—The next Census is due to be taken in 1931 and the Government of India last September negotiated through their Legislature a Bill giving the necessary authority for this purpose. The measure is similar to preceding decennial Bills of the same kind and its principal object is to confer upon the large number of non-official agents who are necessarily employed in making the Census the position and protection of public servants and also to secure that the necessary information shall be provided by those who are responsible for giving it. Dr J. H. Burton, D.Sc., C.I.E., I.O.B., was last autumn appointed Census Commissioner and has since then been engaged upon his duties.

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior or one and is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves; the sleeves may be wide, or long and sometimes puffed from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon. If allowed the greatest variety is shown in the head dress. More than seventy shapes of caps, hats, and turbans may be seen in the city of Bombay in the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles folded brims projecting brims long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the 'parrot's beak' of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a wad in his pocket, yet, as he must work for long hours in water, he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy

trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes; notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes; those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats or drawers, or both are worn. Many Musselman ladies wear gowns and scarves over them. The vast majority of Mahomedan women are *goshes* and their dress and persons are hidden by a veil when they appear in public. A few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Musselman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics or monks and nuns. Hindu men do not as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Musselmans grow beards, most Hindus do not, except in Bengal and elsewhere where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Banyas, do not clip their hair and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular objects of representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil and berries of *Rudraksha* *elaeagnus garitrus*, strung together are worn round their necks by Vaishnavas and Shivas, respectively. The Lingayats, a Shiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikh Akali is fond of blue, the Banyas adopt orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva.—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon crescent in his matted hair and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin, and his vehicle is a white bull. His wife Parvati and his son Ganesha sit on his thighs. An ascetic mean-

ing is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future, the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpati.—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati.—Parvati, the female energy of Shiva, is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful others terrible and ugly. Kail, the tutelary deity of Kalighat or Calcutta, is one of her fierce manifestations. In this form she is black, a tongue smeared with blood projects from her gaping mouth, besides her weapons, she carries corpses in her hands, and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi Gauri, to whom offerings are made in Indian homes at an annual festival in benign. On the other hand the epidemic diseases like the plague and small pox are caused by certain goddesses or "mothers."

Vishnu. The second member of the Hindu trinity is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations, Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana, the abductor of his wife. Krishna is also a human figure, generally represented as playing on a flute, with which he charmed the damsels of his city, esoterically explained to mean his devotees.

Brahma is seldom worshipped, only a couple of temples dedicated to him have yet been discovered in all India.

Minor Deities.—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them, though not mentioned in ancient literature, are celebrated in the works of modern saints.

The Jains in their temples, adore the sacred personages who founded and developed their sect, and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception, and in the opinion of Hindu theologians they are atheists. So also the Buddhists of Burma pay almost the same veneration to Prince Siddhartha as if he was a god and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also atheists.

Images.—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu the swan of Brahma the peacock of Saraswati Hanuman the monkey of Rama one serpent upholds the earth, another makes Vishnu's bed, elephants support the ends of the universe, besides one such animal being Indra's vehicle the goddess Durga or Kali rides on a tiger one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal to the Brahman vegetarian her milk is indispensable, and he treats her as his mother. So did the Rishi of old, who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones, on which the image of a serpent is carved, may be

seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Gandak and the Narmada, which have curious lines upon them, are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers food in a vessel is placed before it, lamps are waved, and the worshipper goes round it, and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place. Jewels are placed on the idol and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated the latter may shock him for a Hindu dead body is generally carried on a few pieces of bamboo and together a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent, and resembles the Christian coffin. Some Hindus, however, carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Babeh, Anus Rao, Bahad, Bapu Lal, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with homoclitic titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red, gold or silver, gem, diamond, ruby, pearl, or merely a stone, small or tall, weak or strong, a lion, a snake, a parrot, or a dog, and to name a woman after a flower or a creeper. Thus, to take a few names from the epic, Pandu means

white, and so does Arjuna. Krishna black. Bhima terrible. Nakula a mongoose. Shunaka a dog. Shuka a parrot. Shringa a horn. Among the names prevalent at the present day Hira is a diamond. Rakna or Rakna a jewel. Souru or Chinna gold. Vell or Bell, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy Vishnu is a paviour Govinda is the cowherd Krishna Kumbhara has fine hair Rama is a delighter Lakshmana is lucky Narayana produced the first living being on the primeval waters Ganesha is the Lord of Shiva's hosts Dinakara is the luminary that makes the day Subrahmanya is a brother of Ganesha Sita is a furrow Savitri a ray of light Paras a star Radha prosperity Rukmini is one of golden ornaments Bhama of the glowing heart Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her offspring unattractive to the powers of darkness she gives them ugly names, such as Kuru, rubbish, or Ukirda, dunghill or Maroba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Many counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviceness and inconstancy as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom if a child is born on a Monday its name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya, Gupta to a Vaisya, and Dasa to a Shudra. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaisya, as have made this fashion of calling one self a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Dasa to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhatnagar, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warrior classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Shadi Mal, as in Gidural, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names, like Bose and Ghose,

Datta and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaisya title, in Southern India. Mirdaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Kayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jambhaji, the Kanarese Appa, the Telugu Gari, the feminine Bai or Devi are honorific. Prefixes like Baba, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahanavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix kar or wallah is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkar and Suratwallah, or without these affixes we may have Bhavnagar, Malabar and Bihmorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The surnames Baksh, Din, Ghulam, Khwaja, Fakir, Kazi, Munsif, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan have meanings which throw light on Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Bati wallah, Ready-money, Contractor, Bakhtwallah, Adenwallah and others like them are tell-tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the *Fine Arts*, and those applied to *Industry* as was the case in Europe during the nineteenth century. As, however, industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to *Architecture, Sculpture and Painting*.

Historical—The degree of proficiency attained in art by Indians prior to B.C. 250, can only be conjectured by their advancement in literature and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them or direct records of artistic work of an earlier date than B.C. 250 do not exist. The chief historic schools of architecture are as follows—

Name	Dates	Locality of the best Examples
Buddhist	B.C. 250— A.D. 750	Ellora, Ajanta, Kailash, Sanchi
Jaina	A.D. 1000— 1300	Ellora, Mount Abu, Pulitana
Brahminical	A.D. 500 to the present day	Ellora, Elephanta, Orissa, Bhuvaneshwar, Dharwar
Chalukyan	A.D. 1000— 1200	Umer, Somnathpur, Ballur
Dravidian	A.D. 1350— 1750	Ellora, Tanjore, Madura, Tinnevely
Pathan	A.D. 1200— 1550	Delhi, Mandi, Jaunpore
Indo-Saracenic	A.D. 1520— 1760	Lahore, Delhi, Agra, Amber, Bijapur

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Tepes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and colonnades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint, a porch, and an arched courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central oval and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without

losing its own special characteristics of which the star-shaped plan of the shrine, with five *fold* hands of external ornament, is a principal feature. Turkish Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosque and tombs at Ahmedabad already show Hindu influence but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date exhibit a certain Turkish influence, especially in the great tomb of Mahmud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fatehpore Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatments unequalled in extent elsewhere, is to be seen in the Ghats or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary such as is now understood by the term was executed for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion, and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline, but for exuberance of imagination, industrious elaboration and vivid expression of movement Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurti in the last named of these temples ranks for mystery

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement, the fine sense of decorative arrangements of line and mass and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention, and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low, and is mainly confined to the decoration of mouldings, archedways, kiosks, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory, but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour but the only paintings, in the modern acceptance of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapped in mystery as is that of the artists who painted them, for no other paintings of similar power and character are known to exist, and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owed its origin to the introduction of Persian artists by the Moghul Emperor Akbar and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water colour upon paper or vellum, resembling in technique the illuminated manuscripts produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character, this phase of development being closely allied to the art

the calligraphist. As its range extended, a remarkable school of portrait painters arose notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu offshoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters, but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term, and, as the question has a distinct bearing upon the modern development of painting, a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same, though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained and development has been upon the line of decorative fitness, harmony of colour, and expressive action. Their art has throughout been decorative and when natural objects have been depicted their treatment has been that of a flat pattern. The European painters after the period above mentioned on the contrary, sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade, and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor, to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule, and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practices. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jahangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters, the execution of a single picture was subdivided: one craftsman painting the face, a second the drapery, and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny the "Company" was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguished public servants were all imported from England, and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archaeologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation, but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The Schools of Art then instituted throughout England were imitated in a timid and tentative manner in India, and were attached to the educational system, which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country, and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State, upon the ground that they had become schools of painting and had thus

been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere, and as two of them, that at Madras and that at Lahore, have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field for in addition to classes for modelling, painting and design it possesses a special school of architecture, a range of technical workshops, in which instruction is given in the applied arts and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who several years ago was the Principal of the Calcutta School, banished from within its walls every vestige of European art and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability backed by intense enthusiasm for the views he held, which he advocated with admirable persistence he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abhinandranath Tagore, an artist of the imagination and fancy, endowed with technical ability of a high order, combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded, about twenty years ago, what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models, and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput schools, and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford and the movement has had to depend for encourage-

ment mainly upon Europeans in England and India

Bombay School of Art—The attitude towards the development of art in modern India taken by Mr Cecil Burns, who long guided the policy of the Bombay school, was diametrically opposite to that favoured by Mr Havell. While yielding to no one in his admiration for the ancient art of India, and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past, that without this spirit, the conventions the ancient artists adopted are mere dead husks; and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the medieval painters that with European pictures, often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr Burns held that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take.

Among the developments during Mr Burns' administration were the founding of the Architectural School, the extension of drawing classes in the Government Schools, and the appointment of an Inspector of Drawing to inspect and report on the drawing classes in the Schools. A Pottery Department was also started and was collapsed in 1926. Mr Burns retired in 1918 and was succeeded in 1919 by the present Principal, Mr W E Gladstone Solomon, A.R.C.S. He later has studiously avoided any utopian theories as to the ultimate and which Indian art is destined to attain though he has insistently pointed out the Indian's pre-eminence in the decoration of wall spaces.

The guiding principle with Mr Solomon has been to teach the students to draw and to let what they see and further to encourage by all possible means their natural progress the decorative direction towards which their present instinct most obviously urges them.

He has always maintained that theory in regard to the training of Indian Art students is in itself unproductive and can only be proven by practice, and as Mr Solomon has now held the post of Principal for several years it is possible to gauge the results achieved by his system of training.

The Life Classes which were started at the end of 1919 have recently been pronounced by competent judges as well up to the level of the Life Classes of the European Schools of Art. But proficiency in technique forms only one side of the present system of training for even in Europe, too much of the study from life is quite capable of negating its own object. In India, where the decorative instinct is inherent, and where the possibilities of freehand drawing are still understood, the danger of overdoing the Life Class is even more palpable. So side by side with these realistic aids to study, and at the same period, a Class of Indian Decorative Training was inaugurated in the Bombay School of Art under the direction of the Governor of Bombay (Lord Lloyd). As this class specialises in Mural Painting it has long been popularly known as the Class of Mural Painting. This class has executed the decorations for many public and private buildings and painted the ceiling and panels of a specially constructed Indian Room which was exhibited at Wembley in 1924. A great deal of controversy which has been characterised by its academic rather than its practical note has centred round these new movements in art training in India, but the Bombay School of Art has retained the patronage and support of the public and the increase in the number of its students (who now number over 800 in all sections of the School) has been continuous since it took its present line. It is significant that the wide spread revival of public interest in Art in Western India has synchronised with these activities.

The School of Art has of late years enjoyed the patronage of successive Governors of Bombay and largely due to the efforts of Sir Leslie Wilson the Government of India inaugurated a competition of Indian Artists in 1927 for the decoration of wall spaces in the new buildings at New Delhi. The result of the Competition was notified in October 1928, when five artists of Bombay, and the students of the Bombay and Lahore Schools of Art were commissioned to paint Mural Decorations in the new Secretariat buildings. The Bombay School undertook the decoration of Committee Room 'A' (in the North Block) and the paintings, which were executed in oils on canvas were finished and successfully placed in position on the dome and walls by the middle of September 1929. These decorations were original compositions of life size figures symbolising the main periods of Indian Art, and the different branches of the Fine and Applied Arts. In April 1929, the Government of Bombay converted the Bombay School into a Department under the Hon. his Minister of Education and Independent of the Director of Public Instruction, the Principal (Mr W E Gladstone Solomon) being made Director.

Indian Architecture.

I ANCIENT

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one and with a few exceptions the only recognized authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion to the great Asoka, who reigned B.C. 272 to 236.

Buddhist Work

Fergusson's first architectural period is then the Buddhist, of which the great topes at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready to come to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajanta, Naik, Ellora and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its debt to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique 'Tower of Victory' at Chittora.

Other Hindu Styles

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable 'Kylas' is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar &c. and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the 'Chalukyan' of South-central India, and the 'Northern or Indo-Aryan style.' The differences and the similarities are apparently so intermixed and confusing that he is loath to fall back on the broad generic title of Hindu—however unscientific he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study—Those at Mukteswara and Bhuvaneswar in Orissa at Khajuraho, Bindraban, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautiful architectural examples in India. So also are the palaces of Amber, Dattya, Uchla, Dig and Udaipur.

Indo-Saracenic

Among all the periods and styles in India the characteristics of none are more easily recognisable than those of what is generally called the 'Indo-Saracenic' which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely as unknown feature hitherto became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders was now forced on their attention by the predictions of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a taboo on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, more richness of sculptured surface and the æsthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as Classic architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building, that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has, being Hindu, a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahometan buildings.

Foreign Influence

There would appear to be a conflict between archaeologists as to the extent of the effect on Indian art produced by foreign influence under the Mahometans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahometan buildings of India and those of North Africa and Europe, the introduction of the minaret and above all, the historical evidences that exist of the presence in India of Europeans during Mogul times are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauty and significance not to be seen in the 6th or 7th century sculptures and point to those of Borobudur in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy, with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo Mahometan and Hindu buildings outweigh those between Indian and Western Mahometan work, especially in the light of the dissimilarity between the latter. They admit the changes produced by the advent of Islam, but contend that the art, though modified,

yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Ferguson is usually regarded as the leader of the former school while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Ferguson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, its tomb at Secundra the Moti Masjid and palace buildings at the Agra fort. At Delhi we have the great Jamma Masjid, the Fort, the tombs of Humayun, Sudar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad

At Ahmedabad with its neighbours Sirkeji and Champanur there seems to be loss of a departure from the older Hindu forms a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jail"—or pierced lattice work, as in the palm tree windows of the Sidai Sayyid Masjid.

Bijapur

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahometan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known Gol Gumbaz—is cited as showing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shows a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

that of the prevailing material, the hard uncompromising Dekhan basalt in a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarati freestone while at Delhi and Agra the freer

choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres

II MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian 'Master-builder' to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much undervalued upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the master, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can show many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these have even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against every thing official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value, both in a pecuniary sense and other wise. It is also to be observed that the survival of a relic of the popular idea of the time before his advent, to the effect that though an architect might occasionally design a building it was always an engineer who built it, is still indicated by the architect in some cases deeming it advisable to style himself "architect and engineer."

To the work of the indigenous "master builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged—to be a remarkable survival—almost the only one left in the world—of "living art," but which is threatened with final extinction by reason of the spread of Western ideals and fashions. The matter

assumed some years ago the form of a mild controversy centring round the question of the then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the indigenous Indian "school" of archaeologists already mentioned, and to have based their ideas on their own reading of the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archaeology and art, have pointed to the 'death' of all the arts of the past in other countries as an indication of a natural law and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed 'another futile revival.' The British in India, they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital has accordingly been entrusted jointly to a London and to a South African architect, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned.

But this controversy, however vital to the interests of the country's architecture, is too purely technical and academic for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention lies in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the various modern buildings of British India as well as examples of the master builders work in nearly every native town and bazaar. The town of Lashkar in Gwalior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious. The extent to which the 'unbroken tradition from the past' exists may be taken as gauged by the traveller who is architect enough for the purpose.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture, the second comprise those applied to articles devoted to religious ritual, military weapons and trappings, domestic accessories and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity, the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century and has since developed features essentially Indian in character. The art of both Hindu and Mahomedan is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes but in that of the Mahomedans nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry, that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often indiscriminate in their employment of ornament, the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace, as in the case of Greek, Roman and Medieval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed, the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carver's art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practices of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical, that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used dictated lower relief and greater refinement in the carving, while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible, while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be so eminently suited to the genius of the Indian craftsman and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious

stones by Indian jewellers may here be referred to Sir George Birdwood states that "the Indian, jeweller shows a prodigious variety of rich and brilliant colours and nothing of the purity of his gems. This is true in a general sense and 'full many a gem of purest ray serene' was utterly ruined by crude cutting and polishing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately most of the ancient wood work has been destroyed by the action of the climate and the terming insectivorous life of India, and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Naik, and other parts of Western India are notable for their picturesqueness and beauty, the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture as the term is now understood few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, cloth chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal while in some cases the wooden parts were entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe and rich colour effects were obtained in this perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artists and craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mohammedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand, and the shapes are those which grow naturally from the working of the material with the simplest implements. In the technical treatment of

brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations except in the department of fine casting. In this, and in the working of gold and silver a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article with out any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised of one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations ornaments of gold and silver were regarded in the light of portable wealth, a practice which naturally made for massiveness. These solid ornaments are most effective and picturesque and, despite an enormous output of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments, religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures, and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal, if not superior, in stone, wood, and metal but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silk fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum blossom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But for beauty of surface and variety of texture no machine-made fabrics have ever equaled

the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs. This art was introduced from Persia, but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence, were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century they were executed by hand labour. The processes involved had no been discovered by scientific inquiry such as is now understood by the phrase, but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine, and the application of mechanical power and scientific research to industry in Europe, mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsman. In place of the ancient ideal of variety in design and treatment, which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman, the organised factory, the small workshop, specialisation and division of labour have taken the place of general proficiency among the artisans, the function of the designer has been separated from that of the craftsman, local markets have been extended to serve the whole world, and the skilled handicraftsman has in a great measure become a machine minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions, and during the greater portion of that period India, protected by the difficulties of transport, continued its immemorial practice. Fifty years ago this protective barrier was removed by the

opening of the Suez Canal, and the handicraftsmen of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship, was attributed to the conservative practice of the craftsmen to the gradual loss of foreign markets, and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period, an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes namely, to the introduction of machinery. Attention had been so concentrated upon speedy production, mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1881 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England where the artistic industries were already highly organised and were commercially successful, and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs, new or old, and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry in India, their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living, but to revive those which were moribund, and resurrect those which were dead. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsmen has been recognised, and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. In addition the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan. Industrial art in India will quickly emerge from the cloud of depression, which has hung over it for a century past into the sunlight of prosperity.

Archæology.

The ancient monuments of India are as varied as they are numerous. Until a few years ago the earliest known were the brick and stone erections of the Maurya period, a group of mounds at Lauriya Nandangarh, illustrative of the Vedic funeral customs and assignable roughly to the 7th or 8th century B.C., and some rough stone walls at the ancient city of Rajagriha of about the same period. The absence of structures of an earlier period was then supposed to be due to the fact that all previous architecture has been of wood and had completely perished. The recent excavations, however, at Mohenjo-daro in Sind and at Harappa in the Punjab have completely revolutionised ideas on this subject and proved that as far back as the 3rd or 4th millennium B.C. and probably much earlier still, India was in possession of a highly developed civilisation with large and populous cities, well built houses, temples and public buildings of brick and many other amenities enjoyed at that period by the peoples of Mesopotamia and Egypt. Both at Mohenjo-daro and Harappa there are the remains of some 5 or 6 cities superimposed one upon the ruins of another.

The structures that have so far been exposed at Mohenjo-daro belong to the three latest cities on the site. Those of the third or earliest are the best in style, those of the first the poorest. Most of the structures are dwelling houses or shops, but there are others which appear to have been temples and one of particularly massive proportions is a large bath, surrounded by fenestrated galleries or halls. All were built of well burnt brick and most of them were of two or more storeys with staircases giving access to the upper rooms. In and around the ruins have been found many minor antiquities including gold and silver jewellery engraved seals of stone and ivory and past copper implements and vessels, terracotta figurines and toys, shell ornaments and potteries both painted and plain.

These discoveries establish the existence in Sind and the Punjab during the 4th and 3rd millennia B.C. of a highly developed city life and the presence, in many of the houses, of wells and bathrooms as well as an elaborate drainage system between a social condition of the citizens at least equal to that found in Sumer and superior to that prevailing in contemporary Babylonia and Egypt. The inhabitants of these cities lived largely no doubt by agriculture and it is a point of interest that the specimens of wheat found at Mohenjo-daro resemble the common variety grown in the Punjab to-day. Besides bread, their food appears to have included beef, mutton, and pork, the flesh of tortoises, fowls and garials, fresh fish from the Indus and dried fish from the sea coast. Among their domesticated animals were the humped Indian bull, the buffalo, a short horned bull, the sheep, pig, dog, horse and elephant. Besides gold and silver they used copper, tin, bronze and lead, they were familiar with the arts of spinning and weaving and with the cultivation of cotton and had attained a high degree

of proficiency in the jewellers and potter's arts.

That they possessed a well developed system of writing is evidenced by the discovery of over a thousand tablets engraved with well executed animal devices and pictographic legends in an unknown script. The method of disposal of the dead at Mohenjo-daro is uncertain but at Harappa two types of burial have been met with namely complete burials along with funerary pottery and pot burials. Only 27 of the latter have been examined and these were found to contain skulls and human bones and are seemingly fractional burials.

This Indus Valley culture has now been traced as far as Rupar in the Ambala District relatively close to the watershed of the Sutlej and Jumna and it is therefore highly improbable that this civilisation was confined to the Indus Valley and there can hardly be any reasonable doubt that future researches will trace it into the valley of the Ganges. Of the long period of more than 2000 years that separates the prehistoric monuments referred to above from the historic period of India, little or nothing is yet known but there is every hope that this gap in our knowledge may be filled in by further excavations. From the time of the Mauryas, i.e., 3rd century B.C., the history of architecture and the formative arts of India is clear and can be traced with relative precision.

Monumental Pillars.—The monuments which have come down to us from the Maurya period, include, besides the caves to be referred to below, the wooden palisade (4th century B.C.) which surrounded the ancient city of Patalliputra (modern Patna) and of which a large section has been exposed, the rock and pillar edicts of Asoka (c. 260 B.C.) the remains of a large pillared hall constructed by the same emperor at Patalliputra, a number of brick stupas and a monolithic rail which originally surmounted an Asoka stupa at Sarnath near Benares. Altogether twelve pillars of Asoka are known. Ten of them bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. The capital of each column like the shaft, was monolithic, and comprised three members viz., a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that carved at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy and originally supported a wheel symbolising the law of piety promulgated by the Buddha. Several pieces of this wheel were found and are now preserved in the Archaeological Museum at Sarnath. Of the post-Asokan period one pillar (B.C. 150) stands to the north east of Benares in the Gwalior State another in front of the cave of Karli (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century A.D. All these are of stone, but there

is one of iron also. It is near the Quth Minar at Delhi, and an inscription on it speaks of its having been erected by a king called Chandir, identified with Chandragupta II (A.D. 375-413) of the Gupta dynasty. It is wonderful to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now. Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jaina temple at Mudabidri, not far from Mangalore.

Topes.—*Stupas*, known as *dagobas* in Ceylon and commonly called *Topes* in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jaiinas built *stupas*, no specimen of Jaina *stupas* is now extant. A notable structure of this kind which existed until recent times, was the Jaina *stupa* which stood on the Kanakalli Tila site at Muttra and yielded a large number of Jaina sculptures now deposited in the Provincial Museum at Lucknow. Of those belonging to the Buddhists the great *Topo* of Sanchi in Bhopal is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circumambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character and are carved inside and out, with elaborate sculptures. The original *stupa* which was of brick and not more than half the present dimensions, was apparently erected by Asoka at the same time as his lion-crowned pillar near the south gate, but as Sir John Marshall's recent explorations have conclusively shown, its outer casing of stone, the railing and the gateway were at least 150 and 200 years later respectively. Other famous Buddhist *stupas* that have been found are those of Sarnath, Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The *topo* proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of the Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Pope in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of the Buddha himself and anshired by his kinsmen, the Sakyas. If this interpretation is correct, we have here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups

of caves are situated in Bhaja Beda, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar and Nagarjuni 16 miles north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, viz. the Buddhists, Hindus and Jainas. The earliest caves so far discovered are those of Barabar and Nagarjuni which were excavated by Asoka and his grandson Dasaratha and dedicated to Ajivikas, a naked sect founded by Mankhaliputta Gosala. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Ferguson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the latter *viharas* there was a *sanctum* in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *staves* adjoining it. Of the Hindu cave temples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Shiva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Shiva and was excavated by the Rashtrakuta king, Krishna I. (A.D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandagiri and Udayagiri, those of the medieval type, in Indra Sabha at Ellora and those of the latest period, at Ankal in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 250-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1903-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society. Another group of caves where equally interesting though less well preserved paintings exist is found at Bagh in Gwalior State. These caves form the subject of a monograph issued by the India Society.

Gandhara Monuments.—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries

and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, frieses of nude Etruscan beaming a long capland, winged Atlantes without number and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar, locally known as Shah-i-Ji Dheri, was explored in 1900 brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over a relic of Buddha by the Indo Scythian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Barina and are now enshrined at Mandalay. To about the same age belong the *stupas* at Manikyal in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class the earliest examples are the Varaha temple at Deogarh District Jhansi, another temple at Sanchi the brick temples at Bhitarwar in the district of Cawnpore all of which belong to the Gupta period and a later one at Jigowa in the Central Provinces. In South India we have two more examples, viz. Lad Khan and Durga temples at Alibole in Bijapur the latter of which cannot be later than the eighth century A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles Indo-Aryan and Dravidian whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style the most prominent ones tend to the perpendicular and in the Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple, and of the latter, the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Dharmawar in Orissa, Kajarihar in Bundelkhand, Oda in Jodhpur, and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Kailasa, or Seven Pagodas, on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather modest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kalasaram at Conjevaram, and to the following century some of the temples at Alibole and Pattadakal of the Bijapur District, Bombay Presidency and the monolithic temple of Kailasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple near Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalkyan by Ferguson. In this style the plan becomes polygonal and star-shaped instead of quadrangular, and the high-storied spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist

at Dambal, Ratihall, Tiliwalli and Hingal in Dharwar Bombay Presidency, and at Hagi and Warangal in Nizam's dominions. But it is in Mysore among the temples at Halebid, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found inscribed in two distinct kinds of alphabet known as Brahmi and Kharoshthi, the latter being confined to the north-west of India. The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of the ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D. and was supplanted by the Brahmi. The earliest datable inscriptions are the celebrated edicts of Asoka to which a reference has been made above. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshawar to Nigdiya in the Nepal Terai from Gumar in Kathiawar to Dhaulvi in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes Antiochus II of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 265 as the date of his coronation. His Ramkund pillar inscription again, discovered in Nepal Terai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Kesgarh pillar. The pillar had been known for a long time but Sir John Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodorus, son of Dion, who is described as an envoy of King Antialkides of Taxila. Heliodorus is herein called a *Bhagavata*, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Naik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, is therein spoken of as having granted three hundred thousand kins and sixteen villages to gods and Brahmans and as having annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are forlorn and blind.

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammedans. Their first mosques were constructed of the materials of Hindu and Jain temples, and sometimes with comparatively slight alterations. The mosque called *Akbar-ka-jompra* at Ajmer

and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, Imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Alauddin and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprang up, and we have here the Jamī Masjid, Hoshang's tomb Jahas Mahal and Hindola Mahal as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda and Gaur towns with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah, the Mahkhi mosque Kadam Rasul Masjid and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty three small domes. Of the various forms which the Saracenic architecture assumed says Ferguson, that of Ahmedabad may probably be considered to be the most elegant. It is notable for its carved stone work and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured Mihrabs and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jamī Masjid, Gagan Mahal, Mihtar Mahal, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Imdad ul daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahal, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Archæological Department.—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but sporadic efforts appear to have been made

by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments and the task of conserving old buildings was left to the fiscal efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established seven of the eight Archæological Circles that now obtain, placed them on a permanent footing and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of Imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.B., Director-General of Archæology, a comprehensive and systematic campaign of repair and excavation has been prosecuted, and the result of it is manifest in the present altered conditions of many old and historic buildings and in the scientific excavation of buried sites such as Taxila, Pattali, putra, Sanchi in the Bhopal State Sarnath near Benares, Nalanda in Bihar, Palahpur in Bengal and Nagpur in Madras and in the Indus Valley at Harappa in the Punjab and Mohenjodaro in Sind. Of all these works those of most general interest are the Mohenjodaro excavations for here the Archæological Department have unearthed remains of prehistoric cities dating back to 1000 B.C. and further. The Archæological Survey has devoted considerable attention to the organization and development of museums as centres of research and education. It maintains the archæological section of the Indian Museum at Calcutta, small museums at the Taj, and at the Forts at Agra, Delhi and Lahore, the Central Asian Antiquities Museum at New Delhi and has erected local museums at the excavated sites of Taxila, Sarnath and Nalanda with the object of keeping the small movable antiquities recovered at these sites in close association with the structural remains to which they belong, so that they may be studied and their natural surroundings and not lose focus and meaning by being transported to some distant place.

The epigraphical material dealt with by the Archæological Survey has enabled the history and chronology of the various dynasties of India to be established on a firmer base and in greater detail. The *Epigraphia Indica*, is now in the 19th volume. A revised edition of the *Asoka Inscriptions* has been recently published and the companion volume of post Asokan inscriptions will appear shortly.

Indian Time

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments and through them to all local bodies a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below.

In India we have already a standard time, which is very generally though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h 21m 10s. in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h 24m 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements, but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India would be preferable.

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India and so as to place all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways, and the substitution for it of a double standard would appear to be a retrograde step, while it would, in all probability, be strongly opposed by the railway

authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike; and it is certain that the double standard would puzzle the latter greatly, while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former the difference between local and standard time can never exceed half an hour whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed therefore to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as Indian Standard Time, and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F and S meaning that the standard time is in advance of or behind local time respectively.—Dibrugarh 51 S, Shillong 38 S, Calcutta 24 S, Allahabad 2 F, Madras 9 F, Lahore 33 F, Bombay 39 F, Peshawar 44 F, Karachi 62 F, Quetta 62 F.

"This standard time would be as much as 54 and 56 minutes behind local time at Mandalay and Rangoon, respectively, and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 5½ hours ahead of Greenwich time and would correspond with 97° 30' E. longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case."

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the letters that were entertained if Standard Time was adopted is a study in the possibilities of human

error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution by which the Municipal clocks

were put at Bombay time which is thirty nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time, in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below --

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a convenient *into sterling*. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs 1000=£100). But after 1873 owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s 4d and then introduce a gold standard at the rate of Rs 15=£1. From 1899 onwards the value of the rupee was maintained, with insignificant fluctuations, at the proposed rate of 1s 4d until February 1920 when the recommendation of the Committee appointed in the previous year that the rupee should be linked with gold and not with sterling at 2s instead of 1s. 4d. was adopted. This was followed by great fluctuations (See article on Currency System).

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A lakh is one hundred thousand (written out as 1,00,000), and a crore is one hundred lakhs or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6 687 after 1899, while a crore of rupees (Rs 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £66 687 after 1899. With the rupee at 1s 6d. a lakh is equivalent to £7,500 and a crore is equivalent to £750,000.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas a fraction commonly used for many purposes by both Indians and Europeans. The anna was formerly reckoned as 1/16 it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pice.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras and

Bombay, may be thus expressed one maund=40 seers, one seer=10 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2 057 lb., and the maund 82 28 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England especially at small shops where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb. and that the value of the rupee remains constant at 1s 4d. 1 seer per rupee=(about) 3 lb. for 2s. 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hoghead of wine contains 63 gallons and a hoghead of beer only 54 gallons, that a bushel of corn weighs 46 lbs in Sunderland and 340 lbs in Cornwall, that the English stone weight represents 14 lbs in the popular estimation but only 5 lbs, if we are weighing glass, and eight for meat, but 6 lbs for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48½ seers in Cawnpore, 40 lb. in Muttra, 72½ in Gorakhpur, 40 in Agra, 50 in Moradabad, 48½ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48½ in Shahjehanpur, 51 in Gorhanganje. The maund

varies throughout all India from the Bengal or railway maund of 82.27 lbs. to the Factory maund of 74 lbs 10 oz 11 drs, the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs and others at 24 lbs and so on

Committees of Inquiry—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful 'lead' which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a 'lead' supplied by local legislation based on practical experience. The want of coherence *savoir faire* or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency where the District Officer Mr. Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913,

when the following committee was appointed to inquire into the entire subject anew —

Mr C A Stibbard (President)
Mr A Y G Campbell
Mr Rustonji Fardoonji

This Committee reported in August 1915 in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says —Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas) practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay Bombay city and Gujarat) and the North West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are —

FOR INDIA

8 khaakhias	= 1 chawal
8 chawals	= 1 rattl
8 rattls	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA

2 small ywars	= 1 large ywar
4 large ywars	= 1 pe
2 pes	= 1 mu
5 pes or 2½ mus	= 1 mat
1 mat	= 1 ngamu
2 ngamuts	= 1 sikai
100 sikais	= 1 pelikha or vim

The tola is the tola of 180 grains, equal to the rupee weight. The visa has recently been fixed at 3.60 lbs or 140 tolas.

Government Action.—The Government of India at first approved the principles of the Report and left the Provincial Governments to take action, but they passed more detailed orders in January, 1922. In these they again, for the present and subject to the restrictions imposed by the Government of India Act and the devolution rules, left it entirely to local Governments to take such action as they think advisable to standardise dry and liquid measures of capacity within their provinces. Similarly, they announced their decision not to adopt all Indian standards of length or area.

As regards weights they decided in favour of the standard mentioned under the heading 'Weights', near the commencement of this article this having been recommended by a majority of the Weights and Measures Committee and having received the unanimous support of the Local Governments. At the same time they provisionally undertook to assist provincial legislation or standardisation and stated that if subsequently, opinion develops strongly in favour of the Imperial standardisation of weights, the Government of India will be prepared to undertake such legislation, but at present they consider that any such step would be premature.

The History of India in Outline.

No history of India can be proportionate and the briefest summary must suffer from the same defect. Even a wholesale acceptance of a history of mythology, tradition, and folklore will not make good, though it makes plausible, the many gaps that exist in the early history of India and, though the labours of modern geographers and archaeologists have been amazingly fruitful, it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynastic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by-ways of history will reveal to him many alluring and mysterious fields for speculation. There are, for example, to this day castes that believe they sprang originally from the loins of a being who landed 'from an impossible boat on the shores of a highly improbable sea', and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained, and, for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3,000 years before Christ, with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu. Recent excavations by the Archaeological Department in the Indus Valley at Harappa in the Punjab, but more particularly at Mohenjodaro in Sind, carry us back even further. They have uncovered sites of cities bearing the marks and containing the relics of a high civilisation stated by the Department to be Sumerian. The excavations are proceeding under special direction and have excited the greatest interest in scientific circles throughout the world, but the general critic omits several of those remote centuries and takes 600 B.C. or thereabouts as his starting point. At that time much of the country was covered with forest but the Aryan race, who had entered India from the north, had established in parts a form of civilisation far superior to that of the aboriginal savages and to this day there survive cities, like Benares, founded by those invaders in like manner the Dravidian invaders from an unknown land, who overran the Deccan and the Southern part of the Peninsula, crushed the aborigines, and at a much later period, were themselves subdued by the Aryans. Of these two civilising forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in, or near, this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius, autocrat of Persia (521 to 485 B.C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the equivalent of about one million sterling. Detailed history, however, does not become possible until the invasion of Alexander in 326 B.C.

Alexander the Great

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos,

on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and Acesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes, and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied, and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the river to the sea was nearly ready. The wonderful story of Alexander's march through Mekan and Persia to Babylon, and of the voyage of Nearebus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered, but his death at Babylon, in 323, destroyed the fruits of what has to be regarded as nothing but a brilliant raid, and within two years his successors were obliged to leave the Indian provinces, heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's generals was a young Hindu, Chandragupta, who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 800,000 troops in the field against Seleucus, to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced, and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the first paramount Sovereign of India (321 B.C.) with his capital at Pataliputra, the modern Patna and Bankipore. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes, the ambassador sent to India by Seleucus. His memorable reign ended in 297 B.C. when he was succeeded by his son Bindusara, who in his turn was succeeded by Asoka (269—231 B.C.) who recorded the events of his reign in numerous inscriptions. This king, in an unusually bloody war, added to his dominions the kingdom of Kalinga (the Northern Orissa) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his children. But he initiated measures for the propagation of his doctrine with the result that "Buddhism, which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably, it measured by the number of adherents. This is Asoka's claim to be remembered; this is it which makes his reign an epoch, not only in the history of India, but in that of the world." The wording of his edicts reveal him as a great king as well as a great missionary, and it is to be hoped that the excavations now being carried on in the ruins of his palaces may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his

reign there had been signs of new forces at work on the borderland of India, where the independent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yueh-chi horde, which, in the first century A.D., also ousted the Indo-Parthian kings from Afghanistan and North Western India.

The first of these Yueh-chi kings to annex a part of India was Kadphises II (A.D. 85-125), who had been defeated in a war with China, but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North, and made Peshawar his capital. Under him the power of the Kushan clan of the Yueh-chi reached its zenith and did not begin to decay until the end of the second century concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, 'one of the most elaborate and precious monuments of piety ever raised by man'.

The Gupta Dynasty

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta, who ruled for some fifty years from A.D. 320, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon, and, in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa-hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—in face of the onset of the White Huns from Central Asia—and by 450 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose, in A.D. 606 capable of consolidating an Empire. This was the Emperor Harsha who, from Thanagar near Ambala, conquered Northern India and extended his territory South to the Nerbudda. Imitating Asoka in many ways, this Emperor yet "felt no embarrassment in paying adoration in turn to Shiva, the Sun, and Buddha at a great public ceremonial." Of his times a graphic picture has been handed down in the work of a Chinese "Master of the Law," Hsien Tsang by name. Harsha was the last native paramount sovereign of Northern India on his death in 648 his throne was usurped by a Minister, whose treacherous conduct towards an embassy from China was quickly avenged and the kingdom so laboriously established lapsed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs

In the meantime in Southern India the Andhras had attained to great prosperity and

carried on a considerable trade with Greece, Egypt and Rome, as well as with the East. Their domination ended in the fifth century A.D. and a number of new dynasties of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved, and in many cases so little known, that to recount them briefly is impossible. Few names of note stand out from the record except those of Vikramaditya (11th century) and a few of the later Hindu rulers who made a stand against the growing power of Islam, of the rise of which an account is given below. In fact the history of medieval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time, and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it; ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aborigines and various foreign tribes began to assert themselves so successfully that the Aryan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event of the middle ages was the transition from tribe to caste, the final disappearance of the old four fold division of Brahmins, Kshatriyas, Vaisyas, and Sudras, and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshatriyas. Their origin is obscure but they appeared in the 8th century and spread, from their two original homes in Rajasthan and Oudh, into the Punjab, Kashmir, and the Central Himalayas, assimilating a number of fighting clans and binding them together with a common code. At this time Kashmir was a small kingdom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy, the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa, another (the Chauhans) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rashtrah (circa 1040 A.D.) and the dynasty then founded by that branch of the Gaharwars of Benares became one of the most famous in India. Later in the same century the Chauhans were united, and by

1193 one of them could boast that he had conquered all the country from the Vindhya to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilisation that had been evolved out of chaos, and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith

was of comparative unimportance though some great men appeared among them. In Gujarat, for example, Ahmad Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier, though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the South various kings of the Bahamani dynasty made names for themselves especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan, a Turk who founded (1490) the Bijapur dynasty of Adil Shahs. It was one of his successors who crushed the Vijayanagar dynasty, and built the great mosque for which Bijapur is famous.

Mahomedan India

The wave of Mahomedan invaders that eventually swept over the country first touched India, in 8m, less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his Mahmud (987-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior and Somnath in Kathiawar, but permanently occupying only a part of the Punjab. During Mahomedan rule was not established until the end of the twelfth century, by which time, from the little territory of Ghazni, there had arisen one Mahomed Ghori capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj, the Chauhan ruler of Delhi and Ajmer, made a brave stand against, and once defeated, one of the armies of this ruler, but was himself defeated in the following year. Mahomed Ghori was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din, the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many Kings who governed and fought and built beautiful buildings, stand out with distinction. One of these was Ala-ud-din (1206-1310), whose many expeditions to the south much weakened the Hindu Kings, and who proved himself to be a capable administrator. Another was Firoz Shah, of the house of Tughlak, whose administration was in many respects admirable, but which ended, on his abdication, in confusion. In the reign of his successor, Mahmud (1398-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Taimur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodi, began to recover. His son, Ibrahim, still further extended the kingdom that had been recovered, but was defeated by Babur, King of Kabul, at Panipat, near Delhi, in 1526, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled in capital other than Delhi up to this date

The Mughal Empire

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babur gained Delhi has already been told. His son Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan an Afghan of great capabilities whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun having snatched Kabul from one of his brothers, was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar, was only 13 years old and was confronted by many rivals. Nor was Akbar well served, but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority, and he subsequently entered the Deccan and captured Ahmednagar. His great ruler who was as remarkable for his religious tolerance as for his military prowess, died in 1605, leaving behind him a record that has been surpassed by few. His son Jehangir, who married the Persian lady Nur Jahan, ruled until 1627, bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra, part of the palace of Agra, and the palace and fortress of Lahore. His son, Shahjahan, was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1687. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty five years struggle against the Marathas of Bivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb the more anxious to establish his Empire on a firm basis in the south, but he was unable to hold his many conquests, and on his death (1707) the

Empire, for which his three sons were fighting could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors, and in 1782 a fresh danger appeared in the person of Nadir Shah, the Persian conqueror, who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Mughal Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 19th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized, for from 1500 onwards, constant expeditions were sent to India and the first two Viceroyalties in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa taken in 1510, became the capital of Portuguese India and remains to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque da Cunha, da Castro in the former class, St. Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for, and the constant drain of men and money from Portugal, necessitated by the attacks made on their possessions in India and Malaya, was found almost intolerable. The junction of Portugal with Spain which lasted from 1580 to 1640 also tended to the downfall of the Eastern Empire and when Portugal became independent again, it was unequal to the task of competing in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese, but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilization and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1498 when Cabot tried to find the North-West passage, and these attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch position had been overcome, notably in the

sea fight off Swally (Suvali) in 1612. The first factory, at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others, including Fort St. George, Madras, (1640) and Hughli (1651). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dowry of Catherine of Braganza stands out as a landmark. It also illustrates the weakness of the Portuguese at that date, since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1654, had already obtained from the Portuguese an acknowledgment of England's right to trade in the East, and that right was now threatened not by the Portuguese, but by Shivaji and by the general disorder prevalent in India. Accordingly in 1686, the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power and create and secure such a large revenue as may be the foundation of a large, well-grounded, sure English dominion in India for all time to come. Not much came of this announcement for some time, and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a tumultuous peace had been concluded with the Emperor and, owing to the difficulties in which the Company found itself in England, there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708, and for some years peaceful development followed, though Bombay was always exposed by sea to attacks from the pirates, who had many strongholds within easy reach of that port, and on land to attacks from the Marathas. The latter danger was felt also in Calcutta. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England, and rebellions like that led by Kelgwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate, the long list of its servants, from Oxenden and Aungler to Hastings and Raffles, contains many names of men who proved themselves good rulers and far-sighted statesmen, the finest Empire-builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden, and Russia. By the French, who founded Pondicherry and Chandernagore towards the end of the 17th century, much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars

When war broke out between England and France in 1744, the French had acquired a

strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Duplex, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron under La Bourdonnais (1746) Duplex wished to hand it over to the Nawab of Arcot—a deputy of the Nizam who ruled in the Carnatic. The French however, kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops, and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Duplex supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Duplex's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power, and in return the Northern Circars, between Orissa and Madras, was granted to the French. This territory, however, was captured by the English in the seven years war (1756-63) Duplex had by then been recalled to France. Lally, who had been sent to drive the English out of India, captured Fort St. David and invested Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in Southern India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal, where Siraj-ud-Daula had acceded to power. The head quarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refugee and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river, the rest surrendered and were cast into the jail known as the "Black Hole." From this small and stifling room 22 persons, out of 146, came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, recaptured the town (1757), and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive, putting forward Mir Jafar as candidate for the Nawab's throne, marched out with an army consisting of 900 Europeans, 1,000 sepoyas and a piece of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive, after beating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne

at Murshidabad, and the price of this honour was put at \$2,540,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty four Parganas. In the year after Plassey, Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar, in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Monghyr, organised an army, and began to intrigue with the Nawab Wazir of Oudh. He soon found, in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 800 Englishmen and a number of sepoyas were massacred, but his trained regiments were defeated at Gheria and Oodeypullah, and Mir Kasim sought protection from the Nawab of Oudh. But in 1764 after quelling a sepoy mutiny in his own camp by blowing 25 ring leaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor, and the Nawab of Oudh in the battle of Buxar. In 1765 Clive (now Baron Clive of Plassey) returned as Governor. "Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive, as our military supremacy dates from his victory at Plassey." Before Clive left India, in 1767 he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render "great and meritorious services to his country."

Warren Hastings.

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor, in 1772, to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India, and, in spite of the factious attitude of Philip Francis, with whom he fought a duel and of other members of his Council, he reorganised the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company, and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal, and from 1774 to 1775

he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the forced contributions he enacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nizamkar for forgery the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasion by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona, and the Bengal troops that he sent over made amends, by the conquest of Gujarat and the capture of Gwalior, for the disgrace of Wadgaon where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with those two potentates. The Nizam he won over by diplomacy, but against Hyder Ali he had to despatch a Bengal army under Sir Byre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in these acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man, cautious, but swift in action when required. He was succeeded, after an interregnum, by Lord Cornwallis (1786-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal Jurisdiction at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the writers and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth), an experienced Civil Servant, succeeded Lord Cornwallis, and in 1798, was followed by Lord Wellesley, the friend of Pitt, whose projects were to change the map of India.

Lord Wellesley's Policy

The French in general, and the Corsican in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he formed the scheme of definitively ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by obtaining from the Nawab of Oudh the cession of

large tracts of territory in lieu of payment overdue on subsidies for British troops, he then won over the Nizam to the British side, and, after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore the Carnatic, and Tanjore roughly constituting the Madras Presidency of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona, the Gaekwar of Baroda, Sindhis of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar fled to British territory and signed the Treaty of Basen which led to the third Maratha war (1802-04) as it was regarded by Sindhis and the Raja of Nagpur at a betrayal of Maratha independence. In this the most successful of British campaigns in India, Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carried all before them the one by his victories of Assaye and Argaum and the other at Aligar and Laswari. Later operations such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient, sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India, and Sir George Barlow carried the government (1805-7) until the arrival of a stronger ruler, Lord Minto. He managed to keep the peace in India for six years and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh, at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Melira, who found himself obliged almost at once to declare war on the Gurkhas of Nepal, who had been encroaching on British territory. After initial reverses, the English, under General Ochterlony, were successful and the Treaty of Sagauli (1816) was drawn up which closed British relations with Nepal to the present day. For this success Lord Melira was made Marquis of Hastings. In the same year he made preparations for the last Maratha war (1817-18) which was made necessary by the lawless conduct of the Pindaris, gangs of Pathan or Rohilla origin, whose chief patrons were the rulers of Native States. The large number of 120,000 that he collected for this purpose destroyed the Pindaris, annexed the dominions of the rebellious Peshwa of Poona, protected the Rajput States, made Sindhis enter upon a new treaty, and compelled Holkar to give up part of his territory. Thus Lord Hastings established the British power more firmly than ever, and when he resigned, in 1823, all the Native States outside the Punjab had become parts of the political system and British interests were permanently secured from the Persian Gulf to Singapore. Lord Amherst followed Lord Hastings, and his five years' rule (1823-28) are memorable for the first Burmese war and the capture of Bhamatpur. The former opera-

tion was undertaken owing to the insolent demands and raids of the Burmese, and resulted in the Burmese ceding Assam, Aracan and the coast of Marahan and their claims to the lower provinces. The capture of Rharatpur by Lord Combermere (1826) wiped out the repulse which General Lake had received there twenty years earlier. A disputed succession on this occasion led to the British intervention.

Social Reform

A former Governor of Madras, Lord William Bentinck, was the next Governor-General. His epitaph by Macaulay says: "He abolished cruel rites, he effaced humiliating distinctions, he gave liberty to the expression of public opinion, his constant study was to elevate the intellectual and moral character of the nations committed to his charge."

Some of his financial reforms, forced on him from England, and his widening of the gates by which educated Indians could enter the service of the Company, were most unpopular at the time, but were eclipsed by the acts he took for the abolition of *sati* or widow burning, and the suppression—with the help of Captain Sleeman—of the professional hereditary assassins known as *Thugs*. In 1832 he annexed Cocher, and, two years later, Coorg. The incompetence of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1881. His rule was marked in other ways by the despatch of the first steamship that made the passage from Bombay to Suez and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the vernaculars. Lord William Bentinck left India (1835) with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasized their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration as well as the legislation of the country, was placed in the hands of the Governor-General in Council and authority was given to create a Presidency of Agra. Before his retirement Bentinck assumed the statutory title of Governor-General of India (1834), thus marking the progress of consolidation since Warren Hastings in 1774 became the first Governor-General of Fort William. Sir Charles Metcalfe, being senior member of Council, succeeded Lord William Bentinck, and during his short tenure of office carried into execution his predecessor's measures for giving entire liberty to the press.

Afghan Wars.

With the appointment of Lord Auckland as Governor-General (1836-42) there began a new era of war and conquest. Before leaving London he announced that he looked with exultation to the prospect of "promoting education and knowledge, and of extending the blessings of good Government and happiness to millions in India," but his administration was almost exclusively comprised in a fatal expedition to Afghanistan, which dragged in its train the annexation of Sind, the Sikh wars, and the incursion of Baluchistan in the protectorate of India. The first Afghan war was undertaken partly to counter the Russian advance

in Central Asia and partly to place on the throne at Kabul the dethroned ruler Shah Shuja in place of Dost Mahomed. The latter object was easily attained (1839) and for two years Afghanistan remained in the military occupation of the British. In 1841 Sir Alexander Burnes was assassinated in Kabul and Sir William Macnaghten suffered the same fate in an interview with the son of Dost Mahomed, The British Commander in Kabul, Gen. Elphinstone, was old and feeble, and after two months' delay he led his army of 4,500 and 12,000 camp followers back towards India in the depth of winter. Between Kabul and Jallalabad the whole force perished, either at the hands of the Afghans or from cold, and Dr. Brydon was the only survivor who reached the latter city. Lord Ellenborough succeeded Lord Auckland and was persuaded to send an army of retribution to relieve Jallalabad. One force under Gen. Pollock relieved Jallalabad and marched on Kabul, while Gen. Nott, advancing from Kandahar, captured Ghazni and joined Pollock at Kabul (1842). The bazaar at Kabul was blown up, the prisoners rescued, and the army retraced to India leaving Dost Mahomed to take undisputed possession of his throne. The drama ended with a bombastic proclamation from Lord Ellenborough and the parade through the Punjab of the (spurious) gates of Somnath taken from the tomb of Mahmud of Ghazni.

Sikh Wars

Lord Ellenborough's other wars—the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable, for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom, had died in 1839, loyal to the end to the treaty he had made with Metcalfe thirty years earlier. He left no son capable of ruling, and the *Khalsa* or central council of the Sikh army, was burning to measure its strength with the British sepoy. The intrigues of two men, Lal Singh and Faj Singh, to obtain the supreme power led to their crossing the Sutlej and invading British territory. Sir Hugh Gough, the Commander-in-Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mudki, Ferozshah Alwal and Sobraon. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Dhillip Singh was recognized as Rajah, Major Henry Lawrence was appointed Resident to assist the Sikh Council of Agency at Lahore, the Jullundur Doab was added to British territory, the Sikh army was limited, and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian proconsuls.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillianwala the British lost 2,400 officers and men.

besides four guns and the colours of three regiments but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief, Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army. As a consequence the Punjab was annexed and became a British province (1849). His pacific policy being so well carried out under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war this time in Burma, owing to the ill treatment of British merchants in Rangoon. The lower valley of the Irrawaddy was occupied from Rangoon to Prome and annexed, under the name of Pegu to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His doctrine of lapse by which British rule was substituted for Indian in States where continued misrule on the failure of a dynasty made this change possible came into practice in the cases of Satara, Jhansd and Nagpur (which last named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system, and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor General and summoned representatives of the local Governments to the deliberations of the Government of India. Finally, in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny, which so swiftly followed his resignation, was by many critics in England attributed to his passion for change.

The Sepoy Mutiny

Dalhousie was succeeded by Lord Canning in 1856, and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate, but are probably to be found in the unrest which followed the progress of English civilisation, in the spreading of false rumours that the whole of India was to be subdued, in the confidence the sepoy troops had acquired in themselves under British leadership and in the ambition of the educated classes to take a greater share in the government of the country. Added to this there was in the deposed King of Delhi Bahadur Shah, a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work, and the British troops reduced, in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10

the sepoys at Meerut rose in mutiny, cut down a few Europeans, and, unbecked by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North Western Provinces and Oudh into Lower Bengal. Ridings in the Punjab were put down by Sir John Lawrence and his subordinates who armed the Sikhs and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India the contingents of some of the great chiefs joined the rebels, but Hyderabad was kept loyal by the influence of its minister Sir Saifur Jung.

The interest of the war centres round Delhi, Cawnpore and Lucknow, though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers. Attacks were frequent and the losses heavy, cholera and sunstroke carried off many victims on the Ridge and when the final assault was made in September the Delhi army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8 and by the 13th a breach was made. On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate, blown in by Home and Salkeld, Col Campbell led his men and Nicholson formed up his troops within the walls. By nightfall the British, with a loss of nearly 1,200 killed and wounded, had only secured a foothold in the city. Six days' street fighting followed and Delhi was won but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hudson.

Massacre at Cawnpore

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib the heir of the last Peshwa a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, rendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock, having defeated the Nana's forces arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invested, and the garrison was

not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced, and in Central India, where Sir Hugh Rose waged a brilliant campaign against the dismembered Rani of Jhansi—who died at the head of her troops—and Tantia Topi.

Transfer to the Crown.

With the end of the mutiny there began a new era in India, strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24 000 officers and men—greatly resenting the transfer—amalgamated with the Royal service, and the Indian Navy was abolished. On November 1 1858, the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the Government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced, and all of every race or creed, were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India—"In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward." Peace was proclaimed in July 1859 and in the cold weather Lord Canning went on tour in the northern provinces to receive the homage of loyal chiefs and to assure them that the 'policy of lapse' was at an end. A number of other important reforms marked the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor General's Council, and the Councils of Madras and Bombay by adding non-official members, European and Indian, for legislative purposes only. By another Act of the same year, High Courts of Judicature were constituted to deal with the increased debt of India. Mr James Wilson was sent from England to be Financial Member of Council, and to him are due the customs system, income tax, license duty, and State paper currency. The cares of office had broken down the Viceroy's health. His successor, Lord Elgin, lived only a few months after his arrival in India, and was succeeded by Sir John (afterwards Lord) Lawrence, the "saviour of the Panjab."

Sir John Lawrence.

The chief task that fell to Sir John Lawrence was that of reorganising the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three. The artillery was to be almost wholly European. The re-organisation was carried out in spite of

financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern, but operations in Bhutan were all the drain made on the army in India while the re-organising process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy, and he laid down the principle for the first time in Indian history, that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col. (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The 'Share Mania' however, did no permanent harm to the trade of Bombay, but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service from an Assistant Magistracy to the Viceroyalty. Lord Mayo, who succeeded him, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties, thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him, for he was murdered in the convict settlement of the Andaman Islands, in 1872. Lord Northbrook (Viceroy 1872-4) had to exercise his abilities chiefly in the province of finance. A severe famine which threatened Lower Bengal in 1874 was successfully warded off by the organisation of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda for mis-government, and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj, and further encouragement was given to the growth of this spirit when, in a durbar of great magnificence held on January 1st, 1877, on the famous Ridge at Delhi, Queen Victoria was proclaimed Empress of India. The Viceroy of that time, Lord Lytton, had, however, to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78, the worst famine India had known. The most strenuous exertions were made to mitigate its effects, and eight scores of rupees were spent in importing grain, but the loss of life was estimated at 5½ millions. At this time also Afghan affairs once more became prominent,

Second Afghan War

The Amir Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Bolan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasid. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Sirdar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Maiwand, and invaded Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman but the latter was left undisputed Amir of Afghanistan until his death in 1901.

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commissioner with a view to the spread of popular instruction on a broader basis, and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin, who succeeded Lord Ripon in 1884, had to give his attention more to external than internal affairs. One of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1885 a third Burmese war became necessary owing to the truculent attitude of King Thibaw and his intrigues with French Powers. The expedition, under General Prendergast, occupied Mandalay without difficulty and King Thibaw was exiled to Rangoon, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January, 1886.

The Russian Menace

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred be-

tween Russian and Afghan troops at Ferozshah, during the demilitarization of the Afghan frontier towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain. War was averted, but the Ferozshah incident had called attention to a menace that was to be felt for nearly a generation more, it had also served to elicit from the Princes of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service Troops was organized. Under Lord Lansdowne's rule also the defences of the North Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinlan the Chief Commissioner of Assam. Mr. Quinlan, the commander of his escort, and others, were treacherously murdered in a conference and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganized under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them; legislation aimed at social and domestic reform among the Hindus; and the closing of the Indian Mints to the free coinage of silver (1893).

Frontier Campaigns

Lord Elgin, who succeeded Lord Lansdowne in 1894, was confronted at the outset with a deficit of Rs. 2½ crores, due to the fall in exchange. (In 1895 the rupee fell as low as 1s. 1d.) To meet this the old 5 per cent import duties were reimposed on a number of commodities, but not on cotton goods and within the year the duty was extended to piece-goods, but not to yarn. The reorganization of the Army which involved the abolition of the old system of Presidency Armies, had hardly been carried out when a number of risings occurred along the North-West Frontier. In 1895 the British Agent in Chitral—which had come under British influence two years previously when Sir H. M. Durand had demarcated the southern and eastern boundaries of Afghanistan—was besieged and had to be rescued by an expeditionary force. Two years later the Wazirs, Swatis, and Mohmands attacked the British positions in Malakand, and the Afridis closed the Khyber Pass. Peace was only established after a prolonged campaign (the Tirah campaign) in which 40,000 troops were employed, and over 1,000 officers and men had been lost. This was in itself a heavy burden on the finances of India, which was increased by the serious and widespread

famine of 1896-97 and by the appearance in India of bubonic plague. The methods taken to prevent the spread of that disease led, in Bombay, to rioting, and elsewhere to the appearance in the vernacular press of scurrilous articles which made it necessary to make more stringent the law dealing with such writings.

Lord Curzon's Viceroyalty

With famine and plague Lord Curzon also who succeeded Lord Elgin in 1899, had to deal in 1901 the cycle of bad harvests came to an end, but plague increased and in 1904 deaths from it were returned at over one million. Of the many problems to which Lord Curzon directed his attention, only a few can be mentioned here. Some indeed claim that his greatest work in India was not to be found in any one department but was in fact the general gearing up of the administration which he achieved by his unceasing energy and personal example of strenuous work. He had at once to turn his attention to the North West Frontier. The British garrisons beyond our bona fide were gradually withdrawn and replaced by tribal levies, and British forces were concentrated in British territory behind them as a support. An attempt was made to check the arms traffic and work on strategic railways was pushed forward. The fact that in seven years he only spent a quarter of a million upon repressive measures and only found it necessary to institute one blockade (against the Mahsud Waziris) is the justification of this policy of compromise between the Lawrences and Forward schools of thought. In 1901 the trans-Indus districts of the Punjab were separated from that Province, and together with the political charges of the Malakand the Khyber Kurram, Tochi and Wana were formed into the new North West Frontier Province, under a Chief Commissioner directly responsible to the Government of India. That year also witnessed the death of Abdur Rahman the Amir of Afghanistan, and the establishment of an understanding with his successor Habibullah. In 1904 the attitude of the Dalai Lama of Tibet being pro-Russian and anti-British, it became necessary to send an expedition to Lhasa under Colonel (Sir Francis) Younghusband. The Dalai Lama abdicated and a treaty was concluded with his successor.

In his first year of office Lord Curzon passed the Act which, in accordance with the recommendations of the Fowler Commission, practically fixed the value of the rupee at 1s 4d, and in 1900 a Gold Reserve fund was created. The educational reforms that marked this Viceroyalty are dealt with elsewhere chief among them was the Act of 1904 reorganising the governing bodies of Indian Universities. Under the head of agrarian reform must be mentioned the Punjab Land Alienation Act, designed to free the cultivators of the soil from the clutches of money lenders, and the institution of Agricultural banks. The efficiency of the Army was increased (Lord Kitchener was Commander-in-Chief) by the re-arming of the Indian Army, the strengthening of the artillery, and the reorganisation of the transport service. In his relations with the Feudatory Chiefs, Lord Curzon emphasised their position as partners in administration, and he

founded the Imperial Cadet Corps to give a military education to the sons of ruling and aristocratic families. In 1902 the British Government obtained from the Nizam a perpetual lease of the Assigned Districts of Berar in return for an annual payment of 25 lakhs. The accession of King Edward VII was proclaimed in a splendid Durbar on January 1, 1903. In 1904 Lord Curzon returned to England for a few months but was re-appointed to a second term of office, Lord Amthill, Governor of Madras having acted as Viceroy during his absence. The chief act of this second term was the partition of Bengal and the creation of a new Province of Eastern Bengal and Assam—a reform, designed to remove the systematic neglect of the trans Ganges areas of Bengal, which evoked bitter and prolonged criticism. In 1905 Lord Curzon resigned, being unable to accept the proposals of Lord Kitchener for the re-adjustment of relations between the Army headquarters and the Military Department of the Government, and being unable to obtain the support of the Home Government. Lord Curzon was succeeded by Lord Minto the grandson of a former Governor General. It was a stormy heritage to which Lord Minto succeeded for the unrest which had long been noticed developed in one direction into open sedition.

Outside Bengal attempts to quell the disaffection by the ordinary law were fairly successful. But scarcely any province was free from disorder of some kind and though recourse was had to the deportation of persons without reason assigned under an Act of 1818, special Acts had to be passed to meet the situation, viz.—an Explosives Act, a Prevention of Seditious Meetings Act, and a Criminal Law Amendment Act which provides for a magisterial inquiry in private and a trial before three judges of the High Court without a jury. Concurrently with these legislative measures steps were taken to extend representative institutions. In 1907 a Hindu and a Mahomedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of dissonance. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy, Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb the friendly relations of the two countries in Asia generally, and in Persia, Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North West frontier, against the Zakhka Khel and the Mohmands, and ships of the East India Squadron were frequently engaged off Masrat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mekran to the frontier of India.

Visit of the King and Queen

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the

King Emperor and the Queen, who arrived at Bombay on December 2, 1911. From there they proceeded to Delhi where, in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons including an annual grant of 50 lakhs for popular education, were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi, the reunion of the two Bengals under a Governor-in-Council, the formation of a new Lieutenant-Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913, the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans.

Still more serious trouble occurred in September 1914, when a riot at Dudge Budge among a number of Sikh emigrants returned from Canada gave a foretaste of the revolutionary plans entertained by those men. The sequel revealed in two conspiracy trials at Lahore, showed that the Ghadr conspiracy was widespread and had been consistently encouraged by Germany.

India after the War

Post war India has a strange and shifting history. In 1919 Englishmen troubled little about affairs in the East; they were engrossed by the settlement of peace and the refusal of the United States either to ratify the Treaty of Versailles or to join the League of Nations. In 1930 however the eyes not only of the British Empire but of the entire world were set upon India, when Mr. Gandhi and his followers for the second time attempted to make the non-cooperation movement effective.

Indians rule the world. India had participated in the war to end war. It was a war waged in defence of Belgium and it ended in a peace ostensibly proclaiming the sanctity of national aspirations throughout the world. For the sake of nationalism the structure of Europe had been broken into fragments. What then was to be India's share in the spoils of peace? The Montagu-Chelmsford Reforms did not satisfy extremist opinion. They were the result of an agreed policy at home, and an agreed policy meant concessions to reactionary opinion.

The Montagu-Chelmsford Reforms worked, and in some Provinces they worked well. Because they worked well it was never possible to withhold reforms. Because experience revealed their shortcomings, it was imperative that greater reforms should be made. Lord Morley and Lord Minto expressly denied that their reforms allowed Parliamentary institutions. Yet the logical conclusion of these reforms was the Montagu-Chelmsford Report which definitely established Parliamentary institutions and that report prepared the way to Dominion Status. Ten years after the war we find the Viceroy and Mr. Gandhi working by different methods for the same end.

Yet to one living through those fevered years the issues were not always clear. Mahomedan and Hindu aspirations did not always coincide. The evil misadventures that persuaded Turkey to associate with the Central Powers in the European War soon tried Mahomedan loyalty. The Khilafatist movement assumed great proportions and the consequence was war for King Amanullah who had just ascended the throne of Afghanistan believed that India was in open revolt. He decided, therefore to invade the country. The Afghan War was unfortunately a prolonged campaign and increased the sense of post war exhaustion in this country. A few years later King Amanullah visited India on an errand of peace. His country had entered the comity of nations, and it would tour Europe as an enlightened monarch. In 1928 he returned to his country which however he was destined soon to leave. His piece of misadventure had been too rapid for his country. He abdicated in favour of his brother Nayyullah who abdicated himself a few hours later. It was not until General Yahir Khan was elected King in the summer of 1929 that peace came to the unhappy land but the keenness with which India followed the progress of the revolution showed how closely were the fortunes of the two countries associated. Mustafa Kemal Pasha's repudiation of the Caliphate was a real blow to the Khilafatist movement. Years later we find the great Mahomedan leader Maulana Mohammed Ali not in alliance with Mr. Gandhi but openly seeking a proper understanding with Great Britain. The Maulana attended the Round Table Conference in London and took a leading part. But before the Conference came to an end the Maulana died in the service of his country.

The appointment of Lord Reading to be Viceroy in 1921 was a landmark in Indian history. Throughout his tenure of office there was opposition and disorder. The Duke of Connaught came to open the new council and the *Swargists* did their utmost to boycott the visit. The Prince of Wales came a year later on a non-political visit but his arrival in Bombay was the signal for severe rioting.

Mr. Gandhi's weapons of attack were boycott and the wearing of *Ahaddar*. *Ahaddar* as an Indian cloth, weakened the importation of foreign cloth. The boycott was directed not only against British goods but against the entire machinery of Government. In 1923 Lord Reading's certification doubled the Salt Tax, thus showing that the Legislative Assembly had no real control over finance. The responsibilities of the Assembly were few. Since the Government could override its decisions, its decisions became irresponsible. In the Provinces, however, there was less irresponsibility, and consequently the members of the Legislative Councils were often the allies of Government. But it took time for Indian opinion to realise that the Legislative Councils, however imperfect, were the instruments of order and good government. Some years later, the boycott broke down. Mr. C. R. Das, one of Mr. Gandhi's chief lieutenants, decided to associate with the Legislature—ostensibly to destroy the reforms, but actually because he and many others had grown

tered of a policy of mere negotiation. The downfall of non co operation was further signalled by the election of a great Swarajist, Mr V J Patel to be President of the Legislative Assembly—an office which he held until the summer of 1930.

When Lord Irwin succeeded Lord Reading in 1926 the prospects of peace improved. It was ordained by Statute that a Commission should examine the Indian Reforms within ten years of the inception of the Government of India Act. In 1927 both the British Government and the Government of India agreed that the Commission should be appointed as early as possible. Accordingly, in the autumn it was announced that Sir John Simon and other members of Parliament should be members of a new **Statutory Commission**. Their appointment was the occasion of a new outburst. Neither Mr Gandhi's followers nor the moderates would support the Commission. It was to be boycotted from the start. The chief complaint was that all the members of the Commission were Europeans. The Congress party, and even the moderates demanded in its place a Round Table Conference and the promise if not the immediate offer of Dominion Status. The boycott however was not very effective. One by one the Provincial Councils decided to co operate with the Simon Commission, the Legislative Assembly almost alone among the Legislatures stood consistently for boycott. Yet it is significant that before the Simon Commission had published its report, the Viceroy not only announced that the goal of Government in India was Dominion Status, but invited representatives of India to a Round Table Conference in London. He stood where the moderates and half the Congress had stood two years before. Meanwhile, Congress became still more extremist. In January 1929, Mr Gandhi announced that if India was not given Dominion Status within a year, he would lead the campaign for Independence.

He kept his word, and the Lahore Congress of December 1929 under the guidance of Pandit Jawaharlal Nehru rather than Mr Gandhi, voted in favour of Independence.

The new struggle began in earnest in March, 1930. Mr Gandhi first decided to break the Salt Laws. He made an imposing march from Ahmedabad to the coast, where he ceremoniously manufactured salt that could not be taxed. Non co operation was in full swing. For a short time Bombay was virtually a Congress City. There were numerous arrests, and before the year closed there were to be in India no less than fifty thousand people incarcerated for political offences.

The Government of Lord Irwin was assailed on all sides. Some condemned it because it was weak, others condemned it because it was repressive. Its conduct had a curious reaction upon political opinion in England, which possessed the dubious advantage of a minority Government. At one time the Conservatives were demanding the recall of Lord Irwin. Similarly, Provincial Governors were criticised for alleged inactivity. In the summer few predicted any success for the Round Table Conference. The Simon Commission published a Report that was condemned by practically every party in India. It was practically a still born Report. Events had moved too rapidly. The Round Table Conference however, proved to be the culminating point of a world wide interest in the Indian political struggle. The Princes, at first assumed the lead. They stood for a Federal Government in which the States and British India should be partners. At once the extremists who had intended to ignore the Conference showed the keenest concern. The Conference, despite all evil prognostications, represented the voice of India. The delegates were still working in London when the troubled year 1930 came to an end.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coasts of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William) by a President or Governor and a Council consisting of the senior servants of the Company. The three Presidencies were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldy councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773 a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784 which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General in Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business

and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General is the sole representative of the Crown in India; he is assisted by a Council composed of high officials, each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them. It has constructed and maintains most of the important irrigation works, it owns and manages the post and telegraph systems. It has the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education, medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Indian States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of 1919.

THE REFORMS OF 1919

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921. The Act

was the outcome of an inquiry conducted in India in the winter of 1917-18 by the Secretary of State (Mr. Montagu) and the Viceroy (Lord Chalmers), the results of which were embodied in their Report on Indian Constitutional Reform issued in the spring of 1918.

The recommendations in this report were supplemented by those of two Committees which toured in India in the winter of 1918-19, and which issued their Reports in the spring of 1919. A third Committee was appointed during the latter year to make recommendations for the modification of the system of administration of Indian affairs in the United Kingdom, and issued their Report while the Government of India Bill was under examination by a Joint Select Committee of both Houses of Parliament. The Joint Select Committee in their turn issued an exhaustive Report on the Bill, which was passed in a form practically identical with that recommended by the Joint Committee, and received the Royal Assent on the 23rd December 1919.

The Divisions—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or administration. In nine of the provinces—the three Presidencies of Madras, Bombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, Burma, and Assam—the Local Government consists of a Governor, an Executive Council of not more than four members, and two or more Ministers. In 1923 Burma, which was excluded from the original scheme, was brought into line with it. An Act of Parliament was passed, constituting Burma a Governor's Province with a Governor, an Executive Council and Ministers, and a Legislative Council elected on a very democratic franchise, which gave the vote to women. The remaining six provinces are directly administered by Chief Commissioners, who are technically mere agents of the Central Government of India. No change has been made by the Act of 1919 in the system of administration in these six minor provinces.

Dyarchy—In these nine provinces the executive Government is a dual organism which owes its unity to the Governor. One hand of the organism consists of the Governor and his executive Council all of whom are appointed by the King. This body is responsible for the administration of those subjects which are reserved. The other half of the executive organism is the Governor acting with the advice of Ministers who are appointed by him, hold office during his pleasure and must be elected members of the Provincial Legislative Council. To the Governor acting with Ministers is entrusted the administration of "transferred" subjects.

The Object—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification of the previous system under which the Governments in India both central and provincial, received their mandates from the British Parliament acting through the Secretary of State for India, the Cabinet Minister responsible to Parliament for the administration of Indian affairs.

The Provinces—Starting from the pre-

mise that it was in the provinces that the first substantial steps must be taken towards the development of a system of responsible government, the framers of the Act of 1919 provided for a statutory demarcation of the functions to be exercised by the Government of India and the Provincial Governments respectively, in their administrative capacity. No attempt was made in this connection to limit the field open to the Indian Legislature which still retains a concurrent (though not an overriding) power of legislation for the affairs of the provinces in general and of individual provinces, but the rules under the Act provide specifically for the exercise of this right in certain specified provincial matters, and the theory upon which the Act proceeds assumes that a convention will be established and rigorously observed which will confine intervention by the Indian Legislature in provincial affairs to matters so specified.

Finance—The revenues of India—or, rather, their sources—are definitely divided between the Central and Provincial Governments. The Provincial Governments have now almost complete control over the administration of their allocated "revenues," they have power to supplement them by raising loans on the security of these revenues, and their right, subject in certain cases to the Governor General's sanction, to initiate new taxation measures is formally recognised.

It was found impossible to devise any scheme of allocation of revenues between the Central and Provincial Governments which did not leave the former with a deficit. This deficit is to be met in part by an annual contribution from seven of the eight Governor's provinces, the provinces of Bihar and Orissa, owing to the comparative exigency and inelasticity of its own revenues, having been exempted from this contribution. The aggregate sum thus due from the provinces to the Government of India at the outset is Rs. 983 lakhs, of which Madras contributes Rs. 348 lakhs, the United Provinces Rs. 240 lakhs, the Punjab Rs. 175 lakhs and the other four provinces sums ranging from Rs. 15 lakhs to Rs. 64 lakhs. The annual contribution is in no case to be subject to increase in the future, and if reduction of the aggregate is found possible by the Government of India reductions are to be made in fixed proportions from the quota of the several provinces.

Responsibility—The first steps towards responsibility were to transform the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent, as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules have given the vote to about 5,000,000 of the adult male population, and have enabled the Legislative Council of any Governor's province to extend the franchise to women. The

following table shows the strength and composition of each of the Provincial Councils.—

Province	Elected.	Nominated and <i>ex-officio</i>		Total.
		Officials.	Non-officials.	
Madras	98	23	6	127
Bombay	86	20	5	111
Bengal	118	20	6	139
United Provinces	100	18	5	123
Punjab	71	16	0	83
Bihar and Orissa	76	18	9	103
Central Provinces	53	10	6	69
Assam	39	9	5	53
Burma	78	10	8	101

The figures for officials in this table are maxima in every case and where less than the maximum number of officials is nominated to any Council, the number of nominated non-officials must be increased in proportion, e.g. if there are only 16 officials (nominated and *ex-officio*) on the United Provinces Council there must be seven nominated non-officials. The official members who have seats *ex-officio* are the members of the Executive Council, who are at present four in number the statutory maximum in Madras, Bombay, and Bengal three in Bihar and Orissa, and two in each of the remaining provinces. These Executive Councils contain an equal

number of Indian and British members except in Bihar and Orissa where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities and special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

Class of Electorate	No of Electorates of this Class	No of Members returnable by Electorates of this Class
Non-Muhammadan	42	46
Muhammadan	34	39
European	3	5
Anglo-Indian (in the technical sense of persons of mixed European and Asiatic descent)	1	2
Landholders	5	6
University	1	1
Commerce and Industry	8	15
Total	94	118

Of the 94 constituencies in Bengal, all but nine (those representing the University and Commerce and Industry) are arranged on a territorial basis, i.e. each constituency consists of a group of electors, having the prescribed quali-

cations which entitle them to a vote in a constituency of that class, who inhabit a particular area. The normal area for a Muhammadan or non-Muhammadan constituency is a district (or where districts are large and popu-

ious, half a district) in the case of rural constituencies, and, in the case of urban constituencies, a group of adjacent municipal towns. Some large towns form urban constituencies by themselves, and the City of Calcutta provides eight separate constituencies, six "non-Muhammadan" and two Muhammadan, the latter of course, being coterminous with the former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those which are designed to represent special interests, such as Landholders, Universities, Planters or Commerce being described as special constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as general constituencies.

Voters Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province, chiefly on account of variations in the laws and regulations which form the basis of assessment of income or property values. Generally speaking, both in rural and urban areas the franchise is based on a property qualification as measured by the payment of a prescribed minimum of land revenue or of its equivalent, or of income tax, or of municipal taxes, but in all provinces retired

pensioned or discharged officers and men of the regular army are entitled to the vote, irrespective of the amount of their income or property.

Election Results.—A Parliamentary Paper (Cmd. 2925), published in 1927, gives the following summary of election results. This return relates to the third General Election which took place in 1926 except in the case of the Council of State and the Burma Legislative Council the elections to which took place in 1925. In these two cases the elections were the second under the Act of 1919, because the Council of State has a life-time of five years as compared with three years in the case of the Legislative Assembly and the Provincial Councils, and because the Reforms were inaugurated in Burma two years later than in other provinces.

The figures given for the number of electors who voted and the percentages of the number who voted to the number on the electoral roll are, in the case of plural member constituencies approximate only. In these constituencies each elector has as many votes as there are seats to be filled and the figures are calculated on the assumption that each elector used all his votes; that is, the figure given as the number of electors who voted is the result of dividing the number of votes polled by the number of seats to be filled.

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS

In origin the legislative authority in British India was a meeting of the Governor-General (or, in the case of the Presidencies of Madras and Bombay, of the Governor) with his Executive Council, for the purpose of legislation. When met for this purpose there were added to the Executive Council certain

additional members, at first very few in number, and those few all nominated by the Governor-General or the Governor, as the case might be. A Council so constituted had originally no powers or duties beyond those immediately arising out of the discussion of the particular legislative measure which at the time was engaging its attention, and its functions were confined strictly to the discussion and enactment of legislative measures. In course of time the number of "additional" members, and the proportion of these who were non-official Indians, were steadily increased, the principle of election was gradually substituted for nomination as the means of selecting non-official members, and the functions of the Councils were extended so as to include the right of interpellation, of the discussion of matters of general public interest, and of criticising and discussing the budget proposals of the Executive Government. This extension of the powers of the Councils was in the main the result of the Morley-Minto Act of 1909. The Indian Councils Act of 1892 had given power to discuss the budget but not to divide the Council upon it. Lord Morley's Act went further and provided that notwithstanding the terms of the Indian Councils Act of 1861 which had restricted the powers of all Councils to the discussion of legislative measures, the Local Government might make rules authorising the discussion of the annual financial statement, of any matter of general public interest, and the asking of questions under such conditions and restrictions as might be imposed by the rules, and these rules recognised the right of the Councils to vote on motions thus submitted for their discussion. The other results of the Act of 1909 were definitely to recognise the principle of election as the means of selecting non-official members of all Councils (although the method adopted was mainly that of indirect election), a considerable increase in the number of both non-official and official members, and the setting up in every province of a non-official (though not, save in one province, an elected) majority. A further important, though indirect, result of the Morley-Minto Act was the appointment of an Indian member to the Executive Council of the Governor-General and to such Provincial Executive Councils as were then in existence and subsequently created.

Old System.—But although the Legislative Councils (which, originally created in two provinces only in addition to the Governor-General's Legislative Council, existed in 1919 in nine provinces) had steadily acquired a more and more representative character and a large share of the normal functions of a legislative assembly as generally understood, they still remained in theory up to the passing of the Act of 1919 mere accessories to the Executive Government of the provinces for the purpose of advising on, and

enacting, legislation. It is true that the non-official element in the Provincial Councils as constituted by Lord Morley's Act of 1909 had acquired a considerable measure of control over legislation, in view of the fact that in most provinces that Act and the rules framed under it placed the non-official members in a slight majority over their official colleagues, but for various reasons this control even in the sphere of legislation, can hardly be described as definite popular control, and over matters outside the legislative sphere the Councils had no controlling vote at all.

The Changes.—The most important changes made by the Act of 1919 in the powers of the Provincial Councils were—

- (i) the power to vote (and consequently to withhold) supplies
- (ii) a greatly enhanced freedom of initiation in the matter of legislation, and
- (iii) power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence.

A further right which the Councils will acquire after four years from the time of their commencement is the right to elect their own President. At the outset the President is nominated by the Governor, but from the start every Council has an elected Deputy President. The Governor (who formerly was *ex-officio* President of his Legislative Council) no longer has any direct connection with its proceedings. The first named of these newly acquired powers is of sufficient importance to require a detailed explanation of its scope, which can best be given in the terms of the Act itself (section 72a).

72a—(1) The provisions contained in this section shall have effect with respect to business and procedure in governors' legislative councils.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed—

Provided that—

(a) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject, and

(b) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquility of the province, or for the carrying on of any department, and

(a) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council

(b) Nothing in the foregoing sub-section shall require proposals to be submitted to the council relating to the following heads of expenditure —

(i) Contributions payable by the local government to the Governor-General in Council and

(ii) Interest and sinking fund charges on loans, and

(iii) Expenditure of which the amount is prescribed by or under any law, and

(iv) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council and

(v) Salaries of judges of the high court of the province and of the advocate-general

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final

Executive and Legislature.—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into 'reserved' and 'transferred' categories. The rules under the act prescribe a list of 20 subjects which are transferred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise, and Development of Industries. The 'reserved' subjects comprise all those in the list of 'provincial' (as distinct from 'central') subjects which are not transferred.

Machinery.—No change has been made by the Act of 1919 in the machinery and methods of administration by the Governor in Council. Decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled, as before to overrule such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains, as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of enforcing them despite opposition by a majority of the Legislative Council. But, the whole spirit of the Act and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature who, though they are not charged by law with, and in fact are legally absolved from, any responsibility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council. But

these factors, while they will doubtless lead to constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government and of the Secretary of State as a member thereof to lay down and require the observance of any principles which they regard as having the support of Parliament and, in the last resort of the British electorate.

Transfer of Control.—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British sector and the British Parliament to the elector and the Legislative Council in the Indian province. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of 'reserved' subjects or departments, so each Minister is directly responsible for the administration of those particular transferred 'departments' which are included in his portfolio. But his responsibility lies, not, as in the case of a member of the Executive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence not only of the Governor, but also of the Legislative Council, upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily qualify its control over the 'reserved' subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote. No doubt his statement requires some qualification before it can be accepted as literally accurate, for technically, the authority charged with the administration of transferred subjects is "the Governor acting with Ministers appointed under this Act," not the Ministers acting on their own initiative, and, further, the Governor, who is not, of course, subject to removal from office by the Legislative Council, is charged personally with responsibility for the peace and tranquillity of his province, and would be entitled, and indeed bound, to recommend the removal of a department from the transferred list if he found the legislature bent on pursuing a policy in its administration

which, in his judgment, was incompatible with the maintenance of peace and tranquillity, yet the powers of control vested in the Legislative Council over the transferred sphere are undoubtedly great, and it was the opinion at all events of the Joint Select Committee that Legislature and Ministers should be allowed to exercise them with the greatest possible freedom. If after hearing all the arguments, observed the Committee, Ministers should decide not to adopt his advice, then in the opinion of the Committee the Governor should ordinarily allow Ministers to have their way, fixing the responsibility upon them, even if it may subsequently be necessary for him to vote any particular piece of legislation. It is not possible but that in India, as in all other countries, mistakes will be made by Ministers acting with the approval of a majority of the Legislative Council, but there is no way of learning except through experience and the realisation of responsibility.

Provision of Funds—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the Executive for the financing of reserved and transferred subjects respectively to be settled by rules, merely providing that rules may be made for the allocation of revenues or moneys for the purpose of such administration i.e., the administration of transferred subjects by the Governor acting with Ministers. Probably the best description available of the method adopted by the rules for the settlement of this matter is the recommendation of the Joint Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time, at the desire of his Council and Ministers an "order of allocation" or to modify it in accordance with their joint wishes. The passage is as follows—

"The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments. They are confident that the problem can readily be solved by the simple process of common sense and reasonable give-and-take, but they are aware that this question might, in certain circumstances, become the cause of much friction

in the provincial government, and they are of opinion that the rules governing allocation of these revenues and balances should be framed so as to make the existence of such friction impossible. They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, find that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenues and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council. The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects, but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction of the balances. If the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter as in all others, should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other, but not to exercise control over it. The budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects, but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers."

THE CENTRAL GOVERNMENT

The structural changes made by the Act of 1919 in the system of government outside the nine Governors provinces are of comparatively minor scope, though the spirit of the Act requires, as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the recom-

stitution in a much more enlarged representative and independent form of the central legislature. It has already been observed that this body was, in origin, like all other legislative bodies in India, the Governor-General's Executive Council with the addition of certain "additional members" appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "additional members," who of course under Lord Morley's Act greatly preponderated in numbers over the members proper, i.e., the Executive Councilors, still persisted up to the passing of the Act of 1919. That Act, however, has entirely remodelled the "Indian Legislature,"

as it is now called, which has become, like the Legislative Council in a Governor's province a legislature with all the inherent powers ordinarily attributed to such a body save such as are specifically withheld by the terms of the Act. It consists of two Chambers. The Council of State "contains 60 members, of whom 24 are elected (including one member to represent Bihar, who, though technically nominated, is nominated as the result of elections held in Bihar) and 26 nominated of whom not more than 20 may be officials. The Legislative Assembly" consists of 144 members, of whom 104 are elected (including in the case of the Council of State, one Bihar member, who, though actually elected, is technically a nominee). Of the 60 nominated members, 26 are required to be officials. The members of the Governor-General's Executive Council are not *ex-officio* members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council may, however, speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, is the President of the Legislative Assembly. But after that period the Lower Chamber is to elect its own President, and it elects its own Deputy President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years; but either Chamber or both simultaneously, may be dissolved at any time by the Governor-General.

Election.—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described except that, *firstly*, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and *secondly* that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis, that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of the elective seats:—

	Legislative Assembly	Council of State
Madras ..	16	5
Bombay ..	14	6
Bengal ..	17	6
United Provinces ..	16	5
Punjab ..	12	4

Bihar and Orissa	12	3
Central Provinces	8	3
Assam	4	1
Burma	4	2
Delhi	1	—
	104	34

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis is the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise.—The general result of the first franchise arrangements under the Act is thus that there is in each province a body of electors qualified to vote for and stand for election to the Provincial Council, and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province. The qualifications for candidature for the Legislative Assembly are the same in each province, *mutatis mutandis*, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate can show that he resides somewhere within the province, no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a 'Senate of Elder Statesmen', and thus to constitute a body capable of performing the function of a true revising Chamber. With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Council, the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers.—The powers and duties of the Indian legislature differ but little in character within the central sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government.

But as no direct attempt has yet been made to introduce responsible government at the centre the step in that direction having been avowedly confined to the provinces and as consequently the Executive Government of India remains legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it follows that the powers conferred

on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or supplies are, as conferred on the Governor-General in his relationship with the Indian Legislature, less restricted in their operation than in the provinces, that is to say, they cover the whole field and are not confined in their application to categories of subjects.

THE INDIA OFFICE.

The Act makes no structural changes in the part played by the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of offices of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which will undoubtedly as time goes on have a material effect on the activities of the Office as it is now constituted. A High Commissioner for India has been appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency as distinct from administrative supervision and control. The process of separation of staff and functions for the purpose of this transfer will necessarily be somewhat slow, but a substantial beginning has been made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in the United Kingdom, and with the assistance of

Indian students in England. Concurrently with this change, it is now possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected, then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however, an estimate was the only basis for settlement, and for five years from 1920-21 the cost of the India Office payable from British revenues has been fixed at £36,500/-, which includes the salaries of the Secretary of State and of the Parliamentary Under-Secretary, and a contribution of £40,000/-, which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Welby Commission.

THE FUTURE.

The Act of 1919 and its provisions are essentially transitional. It is intended, not to set up a new and permanent constitution, but to make such changes in the law as will enable "the progressive realisation of responsible Government in British India as an integral part of the Empire." This feature of the Act was clearly expressed in its Preamble but although the Preamble finds no place in the law as amended by the Act of 1919, that law now contains provision for the appointment, after a period of 10 years trial of the law in its amended form, of a Parliamentary Commission

for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions in British India and matters connected therewith, and such a Commission, when appointed, is directed to report as to whether it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing in British India.

Statutory Commission appointed.—On November 8, 1927, the Prime Minister (Mr. Baldwin) made the following statement in the House of Commons, announcing the appointment, personnel and programme of the Statutory Commission on Indian Reforms:

"As the House will remember, one of the provisions contained in the Indian Reforms Act of 1919 required, 'at the expiration of ten years after the passing' of that Act, the

appointment; with the concurrence of both Houses of Parliament, of persons to be a Commission to inquire into the working of the Indian Constitution and to consider the desirability of establishing, extending, modifying, or restricting the degree of responsible government then existing there. The Government have decided, for various reasons which I need not now specify that it is desirable to anticipate the date (December, 1929) contemplated by the Act, and to appoint this most important Royal Commission forthwith.

Balancing the various considerations and endeavouring to give due weight to each, His Majesty's Government have decided upon the following procedure—

(a) They propose to recommend to His Majesty that the Statutory Commission should be composed as follows:—

The Right Hon. Sir John Simon, K.C.V.O., K. C. (Chairman)

Viscount Buxarham, G.C.M.G., C.H.

Lord Sutherland and Mount Royal.

The Hon. E. C. G. Cadogan, O.B.

The Right Hon. Stephen Walsh. (It was subsequently announced that owing to ill health, Mr. Walsh would be unable to serve and Mr. Vernon Hartshorn was nominated in his place.)

Colonel the Right Hon. G. R. Lane-Fox.

Major C. R. Atiles.

These names will be submitted to both Houses in Resolutions.

(b) His Majesty's Government cannot, of course, dictate to the Commission what procedure it shall follow but they are of opinion that its task in taking evidence would be greatly facilitated if it were to invite the Central Indian Legislature to appoint a Joint Select Committee chosen from its elected and nominated unofficial members, which would draw up its views and proposals in writing and lay them before the Commission for examination in such manner as the latter may decide. The Commission might remain in being for any consultation which the Commission might desire at subsequent stages of the inquiry. It should be clearly understood that the purpose of this suggestion is not to limit the discretion of the Commission in hearing other witnesses.

(c) His Majesty's Government suggest that a similar procedure should be adopted with the Provincial Legislatures.

(d) The vast area to be covered may make it desirable that the task of taking evidence on the more purely administrative questions involved should be undertaken by some other authority which would be in the closest touch with the Commission. His Majesty's Government suggest that the Commission on arrival in India should consider and decide by what machinery this work may most appropriately be discharged, this will not of course deprive the Commission from the advantage of taking evidence itself upon these subjects to whatever extent it may think desirable.

(e) When the Commission has reported and

its report has been examined by the Government of India and his Majesty's Government it will be the duty of the latter to present proposals to Parliament. But it is not the intention of his Majesty's Government to ask Parliament to adopt these proposals without first giving a full opportunity for Indian opinion of different schools to contribute its view upon them. And to this end it is intended to invite Parliament to refer these proposals to consideration by a Joint Committee of both Houses and to facilitate the presentation to that Committee both of the views of the Indian Central Legislature by delegations who will be invited to attend and confer with the Joint Committee and also of the views of any other bodies whom the Joint Parliamentary Committee may desire to consult.

The ante-dating of the Commission involves an amendment of the Act, and a Bill to this end will be introduced at once.

The report of the Simon Commission was published in the spring of 1930. The report of the *Indian Central Committee* appointed in September 1928 to collaborate with the Simon Commission was presented to Parliament in December 1929. The Indian Central Committee was composed of the Hon. Sir Sankarwar Naik, The Hon. Sir Arthur Froom, the Hon. Raja Nawab Ali Khan, the Hon. Sardar Bahadur Shivdev Singh Uberoi, Nawab Sir Zulfiqar Ali Khan, Sir Hari Singh Gour, Dr. Abdullah Suhrawardy, Mr. Kikabul Premchand and Rao Bahadur M. C. Kakhal.

DOMINION STATUS

A statement issued by H. E. the Viceroy on Oct. 31, 1929 defined the goal of British policy as follows—

The goal of British policy was stated in the declaration of August 1917 to be that of providing for the gradual development of self governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire. As I recently pointed out in my own Instrument of Instructions from the King, Emperor expressly states that it is His Majesty's will and pleasure that the plans laid by Parliament in 1919 should be the means by which British India may attain its due place among His Dominions. Ministers of the Crown more over have more than once publicly declared that it is the desire of the British Government that India, should, in the fullness of time, take her place in the Empire in equal partnership with the Dominions. But in view of the doubts which have been expressed both in Great Britain and India regarding the interpretation to be placed on the intentions of the British Government in enacting the Statute of 1919, I am authorized on behalf of His Majesty's Government to state clearly that in their judgment it is implicit in the declaration of 1917 that the natural issue of India's constitutional progress, as there contemplated, is the attainment of Dominion status.

In the full realization of this policy, it is evidently important that the Indian States should be afforded an opportunity of finding

their place and, even if we cannot at present exactly foresee on what lines this development may be shaped, it is from every point of view desirable that whatever can be done should be done to ensure that action taken now is not inconsistent with the attainment of the ultimate purpose which those, whether in British India or the States, who look forward to some unity of All India, have in view.

His Majesty's Government consider that both these objects—namely that of finding the best approach to the British Indian side of the problem, and secondly of ensuring that in this process the wider question of closer relations in the future between the two parts of Greater India is not overlooked—can best be achieved by the adoption of procedure such as the Commission has outlined. When, therefore, the Commission and the Indian Central Committee have submitted their Reports and these have been published, and when his Majesty's Government have been able in consultation with the Government of India, to consider these matters in the light of all the material then available they will propose to invite representatives of different parties and interests in British India and representatives of the Indian States to meet them, separately or together as circumstances may demand, for the purpose of conference and discussion in regard both to the British Indian and the All Indian problems. It will be their earnest hope that by this means it may subsequently prove possible on these grave issues to submit proposals to Parliament which may command a wide measure of general assent."

PERSONNEL AND PROCEDURE.

The Governor-General and the Executive members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respectively the portfolios of Education, Health and Land, Home, Finance, Commerce, Industries and Labour. Law. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Chief Commissioner with the assistance of a Railway Board, and are for administrative purposes grouped under the reign of the Commerce Department. The Commander-in-Chief may also be and in practice always is, an 'Ordinary' member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become extraordinary members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints in practice it meets only in Delhi and Simla.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters. But any question of special importance and any matter in which it is proposed to overrule the views of a Local Government, must ordinarily be referred to the Viceroy. Any matter originating in one department which also affects another must be referred to the latter and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily

once or twice a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can overrule a majority if he considers that the matter is of such grave importance as to justify such a step. Each departmental office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom but with these differences—that the Secretary is present though does not speak, at Council meetings at which cases under his cognisance are discussed that he attends on the Viceroy, usually once a week and discusses with him all matters of importance arising in his Department, that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries together with the ordinary clerical establishments. The Secretaries and Under Secretaries are often, though by no means exclusively, members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces, or, in the case of Specialists, recruited direct by contract.

THE DIVISION OF FUNCTIONS

The keynote of the scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the provinces all of which are raised to the status of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following subjects are reserved to the Government of India, with the corollary that all others vest in the Provincial Governments—

1. (a) Defence of India, and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments.

(b) Naval and military works, cantonments.

2. External relations, including naturalisation and aliens, and pilgrimages beyond India.

3. Relations with States in India.

4. Political charges.

5. Communications to the extent described under the following heads, namely

(a) railway and extra-municipal tramways in so far as they are not classified as provincial subjects under entry 5 (d) of Part II of this Schedule;

(b) airmail and all matters connected therewith, and

(c) inland waterways, to an extent to be declared by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

6. Shipping and navigation, including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 5 (c).

7. Light houses (including their approaches) beacons, lightships and buoys.

8. Port quarantine and marine hospitals.

9. Ports declared to be major ports by rule made by the Governor-General in Council or by or under legislation by the Indian legislature.

10. Posts, telegraph and telephones, including wireless installations.

11. Customs, cotton excise duties, income-tax, salt, and other sources of all-India revenues.

12. Currency and coinage.

13. Public debt of India.

14. Savings Banks.

15. The Indian Audit Department and excluded Audit Departments, as defined in rules framed under section 98-D (1) of the Act.

16. Civil law, including laws regarding status, property, civil rights and liabilities, and civil procedure.

the two Indian Orders (G.M.S.I., and G.I.R.).
On quitting office he becomes G.C.S.I. and
G.C.I.R. with the date of his assumption
of the Viceroyalty

The Imperial Legislatures.

The gradual evolution of the Indian constitution is fully traced in the article on "The Government of India," which precedes this, so also are the great changes made by the Reform Act of 1919. For the purposes of easy reference the powers of the Legislatures, as well as the special powers reserved to the Governor-General for the discharge of his responsibilities, which are fully set out in the Act are reproduced below—

21 (1) Every Council of State shall continue for five years, and every Legislative Assembly for three years, from its first meeting
Provided that—

(a) either chamber of the legislature may be sooner dissolved by the Governor-General and
(b) any such period may be extended by the Governor-General if in special circumstances, he so thinks fit, and

(c) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months, or with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber

22 (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non-official member of either chamber accepts office in the service of the Crown in India his seat in that chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers.

24 (3) If any Bill which has been passed by one chamber is not, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendments or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers. Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose, in order to discuss any difference of opinion which has arisen between the two chambers

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may where a Bill has been passed by both chambers of the Indian legislature, return the Bill for reconsideration by either chamber

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceedings in any court by reason of his speech or vote in either chamber, or by reason of any

thing contained in any official report of the proceedings of either chamber

25 INDIAN BUDGET—(1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

(i) interest and sinking fund charges on loans and

(ii) expenditure of which the amount is prescribed by or under any law, and

(iii) salaries and pensions of persons appointed by or with the approval of His Majesty, or by the Secretary of State in Council, and

(iv) salaries of chief commissioners and judicial commissioners, and

(v) expenditure classified by the order of the Governor-General in Council as—

(a) ecclesiastical,

(b) political,

(c) defence

(4) If any question arises whether any proposed appropriation of revenue of money, does or does not relate to the above heads the decision of the Governor-General on the question shall be final

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads or expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant.

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, set as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, by the legislative assembly

(8) Notwithstanding anything in this section the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof

26 EMERGENCY POWERS—(1) Where either chamber of the Indian legislature refuses leave to introduce or fails to pass in a form recommended by the Governor-General any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety,

tranquillity or interests of British India or any part thereof, and thereupon—

(a) if the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General, notwithstanding that it has not been assented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature or (as the case may be) in the form recommended by the Governor-General, and

(b) if the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if assented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so assented to shall, on signature by the Governor-General, become an Act as aforesaid

(2) Every such Act shall be expressed to be made by the Governor-General and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat, and upon the signification of such assent by His Majesty in Council and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor-General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council

27 SUPPLEMENTAL PROVISIONS—(1) In addition to the measures referred to in sub-section (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

(a) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature,

(b) repealing or amending any Act of a local legislature,

(c) repealing or amending any Act or ordinance made by the Governor-General

(2) Where in either chamber of the Indian legislature any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill or any clause of it, or the amendment affects the safety or tranquillity of British India, or any part thereof, and may direct that no proceedings, or that no further proceedings, shall be taken by the chamber in relation to the Bill, clause, or amendment and effect shall be given to such direction,

THE LEGISLATIVE ASSEMBLY

President — Sir Ibrahim Rahimtulla, KCSI, CIE.

Deputy President — Mr R. K. Shanmukham Chetty

A. ELECTED MEMBERS (104)

Constituency	Name.
Madras City (Non Muhammadan Urban)	M. R. By Diwan Bahadur A. Ramaswami Mudaliar

The Bombay Presidency.

97

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its feudatories and Aden an area of 187,74 square miles and a population of 26,787,648. Of this total 52,453 square miles are in Native States, with a population of 7,412,341. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,182 square miles and a population of 2,082,798.

With effect from the 10th October 1924 the States in the Cutch, Kathiawar and the Palanpur Agencies have been placed under direct political relations with the Government of India. The three agencies have been combined into one, the Western India States Agency, and placed under a first class Resident and Agent to the Governor General with headquarters at Rajkot. The territories under the rule of Indian Princes and Chiefs who are in direct political relations with the Government of Bombay extend now only to an area of about 28,562 sq. miles. The population of these States is about 4 millions and the revenue nearly 5 crores.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapi, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice growing tract, intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper, a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People

The population varies as markedly as soil and climate. In Sind Mahomedans predominate, Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity, the saying goes that the Deccan expects a famine one year in every three, and gets it, the population is much more homogeneous than in Gujarat, and thirty per cent. are Mahatras. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindhi, Gujarati, Marathi and Kanarese, with Urdu a rough lingua francae where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Sind the soils are wholly alluvial, and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial

which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millets, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane regions, and in the south the Dharwar section vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague during the past twenty years. The evils have not been unmixed, for tribulation has made the people more self reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite khopis of Ahmedabad and Surat. Bombay silver ware has a place of its own, as well as the brass work of Poona and Nashik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city Bombay.

Number of Looms in Bombay Island	74,825
Number of Spindles in Bombay Island	84,51,176
Number of hands employed in the Textile Industry in Bombay Island	1,29,375
Consumption of Cotton by the Mills in Bombay Island (bales)	5,68,948
Candies of 392 lbs each	
Number of Spindles in Ahmedabad	13,24,160
Number of Looms in Ahmedabad	39,207
Number of Spindles in Sholapore	2,45,507
Number of Looms in Sholapore	5,121
Number of Spindles in the Bombay Presidency (excluding Bombay Island)	24,23,82
Number of Looms in the Bombay Presidency (excluding Bombay Island)	51,399

Great impetus has been given to Bombay industries by the provision of electric power generated fifty miles away on the Ghats, and the year 1916 witnessed a phenomenal flotation of new industrial companies of almost every description.

The situation of Bombay on the western sea-board in India at once with the principal markets of India and the markets of the West

has given Bombay an immense sea-borne trade. The older ports, Surat, Broach, Cambay and Mandvi, were famous in the ancient days, and their bold and hardy mariners carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concentrate it in modern ports with deep water anchorages, and the sea-borne trade of the Presidency is now concentrated at Bombay and Karachi, although attempts are being made to develop Mormugao in Portuguese territory into an outlet for the trade of the Southern Mahratta Country, and Port Okha as a port of considerable importance for Kathiawar and Gujarat.

Administration

The Presidency is administered by a Governor and an Executive Council of four members, with the assistance of three Ministers. The exact change made in the functions of the Provincial Governments is indicated in the section on the Provincial Governments (p. 9) where a description is given of the division of the administration into two branches, the Reserved Subjects, administered by the Governor and his Council and the Transferred Subjects, administered by the Governor and his Ministers, the whole Government commonly meeting and acting as one. In another part of that section the division between Reserved and Transferred subjects is shown. This new form of administration under the Reform Act of 1919 came into operation in January 1921. All papers relating to public service business reach Government through the Secretariat, divided into seven main departments, each under a Secretary (a) Finance, (b) Revenue, (c) Home and Ecclesiastical, (d) Political, (e) General and Educational, (f) Legal, (g) Public Works. The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government frequently moves. It is in Bombay from November to the end of March, at Mahabaleshwar from April to June, in Poona from June to November but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is administered by four Commissioners. The Commissioner in Sind has considerable independent powers. In the Presidency Proper there are Commissioners for the Northern Division, with headquarters at Ahmedabad, the Central Division at Poona, and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose, the talati or kulkarni, clerk and accountant, the messenger and the watchman. Over each Taluka or group of villages is the munsifdar, who is also a subordinate magistrate. The charge of the Assistant or Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions.

The control of the Government over the Native States of the Presidency is exercised through Political Agents.

Justice

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and nine puisne judges, either Civilian, Barristers, or Indian lawyers. In Sind the Court of the Judicial Commissioner (The Judicial Commissioner and three Additional Judicial Commissioners) is the highest court of civil and criminal appeal. The growing importance of Karachi and Sind has, however, necessitated the raising of the status of the Judicial Commissioners Court and the passing of the Sind Courts Act in August 1923, which contemplates the creation of a Chief Court for Sind with a Chief Judge and three or more Puisne Judges. The Act, however, has not yet been put into effect owing to financial difficulties. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilian or members of the Provincial Service or the Bar. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency, but original criminal work is chiefly disposed of by the Executive District Officers and Resident and City Magistrates. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has six Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes corresponding to the English County Courts.

Local Government

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll and ferry funds. The tendency of recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst larger grants have been made from the general revenues for water supply and drainage.

The Bombay Municipal Boroughs Act of 1925 works further advance in the matter of local Self-Government in the Presidency. The Act provides more adequate basis for Municipal Administration in the larger cities of the Bombay Presidency. The larger municipalities are now styled as Municipal Boroughs which are now 29.

in number. The executives of these Borough Municipalities are invested with larger powers than hitherto exercised. Another important change introduced by the Act was the extension of municipal franchise to owners of dwellings or buildings with annual rental values of Rs 12 or with capital value of not less than Rs 200.

Public Works.

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government, one for Roads, Buildings, Railways, etc. and the other for Irrigation. Under them are Superintending Engineers in charge of Divisions and Executive Engineers in charge of divisions. The Consulting Architect and the Electrical Engineer. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus. The Lloyds Barrage and canal project which was inaugurated in 1923 is the greatest irrigation scheme in the world and is designed to ensure the vast areas of fertile land in Sind a regular and constant supply of water. It will enable 5,458,000 acres of crops to be irrigated annually, i.e. about as much area irrigated in Egypt. The scheme is not only vital to the future of Sind but of indirect benefit to the whole of India. The whole scheme is estimated to cost over 15 millions sterling or 20 crores of rupees. In the Presidency proper there is a chain of protective irrigation works, originating in reservoirs in the Ghât regions. The Principal works are the Nira Canals fed by Lake Whiting impounded by the Lloyd Dam at Bhatgar, the Pravara Canals fed by Lake Arthur Hill, impounded by Wilson Dam at Bhandardara, the Mutha Canals fed by Lake Ilfo at Khadakvasla, the Godavari Canals fed by Lake Beale at Nandur Madhmeshwar and the Gokak Canal. The Mutha Canals and the Gokak Canal were completed in 1896-97. The Nira Left Bank Canal in 1906-08, the Godavari Canals in 1916-18 and the Pravara Canals in 1926-27. The Nira Right Bank Canal which has been under construction since 1912 is nearing completion. The Wilson Dam at Bhandardara the second highest yet constructed by Engineers the world over was opened by His Excellency the Governor on 10th December 1926. The Lloyd Dam, at Bhatgar which is 1,333 feet in length, 180 feet in height and 124 feet in width was opened by H. E. Sir Leslie Wilson on 27th October 1926. It cost Rs 172 lakhs. It is remarkable as being the largest Dam in volume hitherto constructed and contains 214 million cubic feet of masonry. The Assuan Dam in Egypt is popularly supposed to be the largest Dam in existence but that contains 19 million cubic feet. It cost also nearly 50 per cent more than the Lloyd Dam. An idea of the magnitude of the Lloyd Dam can be gathered from the fact that if a wall 6 feet high and 15 inches thick were constructed from the masonry in the Dam it would stretch a distance of 520 miles, say from Bombay to Nagpur. These projects will irrigate certain tracts most liable to famine.

Police.

The Police Force is divided into 3 categories, viz., District Police, Railway Police and the Bombay City Police. The District and Railway Police in the Presidency proper are for the

purpose of control under the Inspector-General of Police who is assisted by three Deputy Inspectors-General of whom two are in charge of Ranges and the third is in charge of the Criminal Investigation Department and the Finger Print Bureau. District and Railway Police in Sind are under the Deputy Inspector-General of Police for Sind, subject to the control of the Commissioner-in-Sind. The executive management of the Police in each district and on Railways in the Presidency proper as well as in Sind is vested in a Superintendent of Police under the general direction of the Magistrate of the District concerned except in the case of the Railway Police. For the purposes of effective supervision over the investigation and prevention of crime some of the larger districts are divided into one or more Sub-Divisions each under a Sub-Divisional Officer who is either an Assistant Superintendent of Police or an Inspector of Police. A Deputy Superintendent of Police Sub-Inspectors are the officers in charge of Police Stations and are primarily responsible under the law, for the investigation of offences reported at their Police Stations. Officers appointed directly to the posts of Assistant Superintendents of Police, Deputy Superintendents of Police, Inspectors and Sub-Inspectors undergo a course of training at the Central Police Training School at Nasik before being posted to Districts for executive duty. The Bombay City Police is a separate force under the Commissioner of Police who is directly responsible to Government.

Education.

Education is imparted partly through direct Government agency, and partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Amherst, Poona, Ahmedabad and Dhawar, the Grant Medical College, the Poona College of Engineering, the Agricultural College, Veterinary College, School of Art, Law College and a College of Commerce. Most of the secondary schools are in private hands. The primary schools are maintained by Local Authorities, with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City (q.v., Education).

The Quinquennial Report on Public Instruction in the Bombay Presidency for the years 1922-1927 reveals much information regarding the progress of education in recent years. The most notable event of the quinquennium was the passing in 1923 of the Primary Education Act whereby the control of Primary Education was transferred from the Department to the Local Authorities. Most of the Boards have prepared schemes for the expansion of education some of them on a compulsory basis, and many boards have levied additional taxation but the finances of Government have not permitted them to perform to the full the part contemplated by the Act. The fact, however, must not be lost sight of that during the quinquennium the assignments of Government to Primary Education rose from Rs. 97,88,154 to Rs. 1,21,50,848, the greater part of which was swallowed up by the increase in the pay of Primary teachers. It is early to pronounce on the results of the transfer of control of the District Local Board Schools, says the Director.

of Public Instruction "The control now exercised by the Boards is very great—greater, it is believed than in any other Province in India and, except for financial purposes, the supervision of the Department has been reduced to a minimum. The chief result of the Reforms is the emphasis they have given to differences of religion and caste, owing to the system of special representation which they have set up, and nowhere have the evils of communalism been more conspicuous than in the administration of the Primary Schools by the Local Authorities.

The quinquennium has been noticeable for the greater recognition given to the Educational needs of the Backward classes especially in Primary Education and a very liberal system of scholarships in Secondary Schools and Colleges for these classes has been introduced.

Lack of funds has not cramped the activities of Government in the field of Primary Education only. Economy has been the dominating note of the Educational policy throughout the quinquennium. So far from it being possible to provide the funds required for the expansion of Secondary and Higher Education, it has been necessary to exercise retrenchment, and that too in directions in which it could not be applied without educational loss. As one instance only, the Director of Public Instruction mentions the discontinuation of the scheme of Medical Inspection after it had been in existence for a year. Among the chief purposes for which additional funds are required perhaps the most important is that for additional provision for Technical and Industrial Education, including the expansion of the College of Engineering and the establishment of a Technological Institution of an advanced nature. In spite however of the inability of Government to provide all the funds that are required advance has been made, if additional expenditure and increased numbers can be held to be regarded as evidence of advance, and it is a noticeable fact that the expenditure from local sources increased from Rs 125 lakhs to over Rs 183 lakhs or about 47 per cent.

The total number of institutions increased during the quinquennium by 1,373 to 18,211. Recognised institutions increased by 1,542 to 14,784 while unrecognised institutions decreased by 164 to 1,427. Of the recognised institutions, 15 are Arts and 10 Professional Colleges, 529 Secondary Schools, 12,385 Primary Schools and 393 Special Schools.

The total number of recognised and unrecognised educational institutions during the year 1928-29 was 17,042 and the number of pupils 1,230,840.

Out of a total of 26,331 towns and villages 10,679 possessed schools, the average area served by each town or village with a school being 9.6 square miles. The percentage of male scholars under instruction in all kinds of institutions to the total male populations was 9.99 as against 9.48 in the preceding year while that of female scholars under instruction to the female population was 2.71 as against 2.58.

Hindu pupils in recognised institutions numbered 925,197. Muhammadans 206,780, Indian Christians 34,680. Parsis 18,111, Europeans and Anglo-Indians 5,158. Among the rest are included 1,152 Sikhs and 5 Buddhists.

The total expenditure on Public Instruction in 1928-29 was Rs 396 lakhs, of which 49.0 per cent was met from Government funds, 18.2 per cent from Board funds, 18.3 per cent from fees, and 13.9 per cent from other sources. Primary schools absorbed over Rs. 198 lakhs, exclusive of expenditure on inspection, construction and repairs.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy or Assistant Inspector in each district.

Higher education in the Presidency is controlled by the Bombay University which was established in 1857. The constitution of the University has recently undergone, however, considerable changes in virtue of a new enactment known as the Bombay University Act of 1928. This Act altered the whole constitution of the University so as to make it adequately representative with a view to bringing into closer association with the public the industrial, commercial and civic life of the people of the Presidency to enable it to provide greater facilities for higher education in all branches of learning including Technology and to undertake on a larger scale than heretofore post-graduate teaching and research, while continuing to exercise due control over the teaching given by colleges affiliated to it from time to time. The authorities of the University as now constituted are chiefly the Chancellor, Vice-Chancellor, the Syndicate, the Academic Council and the Senate. The Senate consisting of fellows is the supreme governing body of the University. The number of fellows is 144 of whom 40 are nominated by the Chancellor and 11 are ex officio. The Academic Council consisting of educational experts deals with all purely academic questions. This body works in collaboration with the Syndicate which is the principal executive of the University.

The principal educational institutions are:—

Government Arts Colleges—
Elphinstone College, Bombay, Principal, Mr H. Hamill, M.A.

Islam College, Andheri (Bombay) Principal, Dr M. B. Rahman, M.A. (Punjab), a Ph. D. (Cambridge).

Deccan College, Poona, Principal, Mr H. G. Rawlinson, M.A.

Gujarat College, Ahmedabad, Principal, G. Findlay Shiras, M.A., F.R.S. (Oxf.).

Karnatak College, Dharwar, Principal, Mr A. F. Farran, B.A.

Royal Institute of Science, Bombay, Principal, Dr A. N. Meldrum, D.Sc.

Private Arts Colleges—
St. Xavier's, Bombay (Society of Jesus) Principal, Rev. Father Durr, S.J.

Wilson College, Bombay (Scottish Mission) Principal, Rev. J. MacKenzie, M.A.

Fergusson College, Poona (Deccan Educational Society), Principal, M. Mahajan, M.A., B.Sc.

Baroda College, Baroda (Baroda State) Principal, S. G. Barrow, B.Sc.

Bambaldas College, Bhavnagar (Bhavnagar State) Principal, Mr T. K. Shahani, M.A.

Bahadurpuri College, Junagadh State, Principal, Mr M. M. Joshi, M.A.

Sir Parashurambhai College, Poona.
M T B Arts College, Surat
D J Sind College Karachi.
Sind National College Hyderabad
Gokhale Education Society's H P T Arts
College, Nasik
Willingdon College Kupwad (Sangli)

Special Colleges—

Grant Medical College, Bombay (Govern-
ment), Dean Captain S L Bhatia I M S
College of Engineering Poona (Government)
Principal Mr O Graham Smith, O B E.
Agricultural College Poona (Government),
Principal, Dr William Burns
Chiefs College Rajkot, Principal, Mr A
C Miller, O B E
College of Science, Ahmedabad
Law College Bombay Principal Mr V G
Dalvi, I L B (Cantab), Barr-at-Law
College of Commerce Bombay, Principal
Mr M L Tannan
Veterinary College, Bombay, Mr K Hewlett
Baffins Institute, Bombay Director, Major
L A F Anderson I M S
Sir J S School of Art Bombay (Govern-
ment), Director Mr W P G Solomon
Victoria Technical Institute Bombay

Private Professional Colleges—

Soth G S Medical College Bombay, Principal
Dr Jivraj Mehta
V E D Civil Engineering College Karachi
Law College Poona
Sir Lalubhai Shah Law College Ahmedabad
Sind Collegiate Board's Law College, Karachi

Medical

The Medical Department is in the charge
of the Surgeon-General who is a member of the

I M S, and Public Health in that of the
Director of Public Health, who is a non I M S
Officer Civil Surgeons stationed at each district
headquarters are responsible for the medical
work of the district whilst sanitation is
entrusted to one of the Assistant Directors of
Public Health Four large hospitals are maintain-
ed by the Government to Bombay, and the
accommodation in them has been recently
increased by 800 beds in one hospital and 120
beds in another hospital Well-equipped hospitals
exist in all important up-country stations.
Over 3,703,000 persons including 99,400 in
patients are treated during the year 1928 The
Presidency contains 6 Lunatic Asylums and 16
institutions for the treatment of Lepers.
Vaccination is carried out by a staff under the
direction of the Director of Public Health.
Sanitary work has received an immense stimulus
from the large grants made by the Government
from time to time

Finance

Under the Reform Scheme of 1919 Provincial
Finance entered on a new phase Before the
passing of this Act Provincial finance was incor-
porated in Imperial Finance The Provinces
had certain heads of revenue of their own and
other heads which they divided with the Govern-
ment of India By the new constitution a
comparatively clean cut was made between the
finances of the Government of India and those
of the Provinces Such revenues as they enjoy
the Provinces enjoy in full, and in return they
make cash contributions to the Government of
India, fixed for a term of years. The general
principle underlying this settlement is that
those contributions shall gradually disappear
These contributions have now been remitted.

Estimated Revenue for 1930-31

PRINCIPAL HEADS OF REVENUE		Rs
V	Land Revenue	5,12,11,000
VI	Taxies	3,89,00,000
VII	Stamps	1,73,53,000
VIII	Forests	78,91,000
IX	Registration	12,00,000
IXA	Scheduled Taxes	19,64,000
Total		11,85,19,000
<i>Irrigation, Navigation Embankment, &c</i>		
XIII	Works for which Capital Accounts are kept	52,24,000

The Madras Presidency.

The Madras Presidency occupies the whole southern portion of the Peninsula, and, excluding the Indian States, most of which have now come under the direct control of the Government of India, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal a coast line of about 1,300 miles, on the south on the Arabian Sea, a coast line of about 400 miles. In all this extent of coast, however, there is not a single natural harbour of any importance, the ports, with the exception of Madras and perhaps of Cochin, are merely open roadsteads. A plateau varying in height above sea level from about 100 to about 800 feet and stretching northwards from the Nilgiri Hills occupies the central area of the Presidency on either side are the Eastern and the Western Ghats which meet in the Nilgiris. The height of the western mountain chain has an important effect on the rain fall. Where the chain is high the intercepted rain clouds give a heavy fall which may amount to 150 inches on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain clouds are not checked in their westward course. In the central table land on the east coast the rainfall is small and the heat in summer excessive. The rivers which flow from west to east in their earlier course drain rather than irrigate the country but the deltas of the Godavari, Krishna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency was returned at the census of 1921 as 42,794,156, an increase over the figure of 1911 of 22 per cent. The tendency has been for the more densely populated portions of the province to increase their numbers while the sparsely inhabited tracts have still further declined in density. Hindus account for 89 per cent of the population. Mahomedans for 7, Christians for 8, Animists for 1. The vast majority of the population is of the Dravidian race and the principal Dravidian languages, Tamil and Telugu are spoken by 18 and 16 million persons respectively. Of every thousand people, 410 speak Tamil, 377 speak Telugu, 73 Malayalam, 37 Oriya, 35 Canarese and 23 Hindustani.

Government

The Madras Presidency is governed on the system generally similar to that obtaining in Bombay and Bengal. There are associated with the Governor four members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs, however in some important respects from that of other major provinces. There is no intermediate local authority between the Collector of the District and the authorities at head quarters. Commissioners of Divisions being unknown in Madras. Another feature peculiar to the Southern Presidency is the manner of choice of the ministers. Following the practice of the Mother of Parliaments, Madras Governors

have, ever since the inception of the Reforms, called upon the leader of the dominant party to form a ministry giving him freedom to select his colleagues on the ministry. Consequently he enjoys the status of Chief Minister—unknown in other provinces in India.

Agriculture and Industries.

The principal industry of the province is agriculture in which 66 per cent of the population is engaged. The principal food crops are rice, cholam, ragi and kamhu. The industrial crops are cotton, sugar-cane and groundnuts. Agricultural education is rapidly progressing in the Presidency with a well known college at Coimbatore with classes for juvenile and adult labourers attached to it one agricultural middle school and numerous demonstration farms. The opening of two more schools have been sanctioned. One of the two sanctioned schools has since been opened by the District Board for the benefit of the Kullars at Uthampettai. While paddy which is the staple food of the population occupies the largest cultivable area cotton is by no means an inconsiderable crop of the province and is receiving close attention at the hands of local agricultural authorities. The area under cotton is estimated at 2,484,775 acres and, as in the case of paddy efforts are being made to produce better strains of cotton suited to different localities by means of both selection and hybridisation. Side by side with an increase in the area under cotton there has been a strict exclusion of inferior cotton from existing good staple areas while improved varieties have been systematically introduced. A special feature of the agricultural activities in the Presidency is the large industry which the planting community have built up, contributing substantially to the economic development of the province. They have organised themselves as a registered body under the title of The United Planters Association of South India on which are represented Coffee tea rubber and a few other minor planting products. The aggregate value of such exports of the Presidency which was Rs 1,14,70,98,099 in 1928-29 has declined to Rs 1,11,43,58,901 in 1929-30. As in other provinces the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

There are 28 cotton mills in the Presidency which employ 32,866 operatives. Minor industrial concerns number over 120 and consist of oil mills, rope tile works etc. Tanning is one of the principal industries of the Presidency, and there is considerable export trade in skins and hides although hide tanners have not been doing well of late and suffered from the present commercial depression. The manufacturing activities which are at present under the direction of the Department of Industries are mainly confined to the production of soap. The match making industry is just raising its head in Madras. There are 28 indigenous match factories run on cottage lines. In 1927, the Council complied with a demand made by the minister in charge of Industries for funds for appointing a special officer to conduct an exhaustive survey

of the existing and potential cottage industries in the Presidency. The Special Officer has concluded his survey. His reports have been published. The report of the Cottage Industries Committee appointed at the instance of the Legislative Council to examine the Special Officer's report and to submit proposals to Government for an effective organisation of such of the industries as deserve encouragement has also been published for general information. The recommendations of the Committee are under the consideration of Government. The aggregate value of seaborne trade of the Presidency which was Rs. 174,70,38,699 in 1925-26 has declined to Rs. 111,43,56,981 in 1928-29. As in other provinces, the forest resources are exploited by Government. There are close upon 19,000 square miles of reserved forests.

Education.

The Presidency's record in the sphere of education has been one of continuous progress. There are at present about 56,000 public institutions ranging from village primary schools to arts and professional colleges. Their total strength being about 2,729,000. Special efforts are being made to provide education for boys belonging to the Depressed Classes. The Council passed a resolution in the year 1927 at the instance of a nominated member that poor girls reading in any educational institution in the province—Government local fund Municipal or aided—should be exempted from school fees in any Standard up to III Form. The total expenditure of the province on Education is in the neighbourhood of Rs. 542 lakhs. The principal educational institutions in the province are the Madras Andhra and Annamalai Universities, the Presidency College, the Christian College, the Loyola College, the Pachaiyappa's College, and the Queen Mary's College for Women, Madras, the St. Joseph's College, Trichinopoly, the Government College, Kumbakonam, the Government College, Rajamundry, the Maharaja's College, Trivandrum, the Agricultural College, Coimbatore, the Medical Colleges at Madras and Vizagapatam and the Engineering College at Madras (Guindy).

Cochin Harbour Scheme

The Government of Madras and the authorities of the Cochin and Travancore States have come to an agreement regarding the financing of the Cochin Harbour scheme. The importance of this project lies in the fact that a good harbour at Cochin would lead to the development of a valuable hinterland which is at present far removed from any convenient port. The scheme is to cut a passage through the bar which blocks the entrance from the sea to an extensive backwater. A trial cut was made in 1922 and the effect of the monsoon thereon observed. The results recorded were examined by a committee of Harbour Engineers in England which reported favourably on the prospects of the scheme. The cutting of a passage through the bar was completed by 31st March 1929. A buoyed dredged channel leads from the outer roads into the harbour a distance of about 2½ miles. The least depth of water in the channel is 24 feet at L.W.O.S. and it is practicable at all seasons of the year for vessels drawing up to 30 feet. Inside

the harbour vessels lie at single buoys and swing to the tide. Small steamers and sailing craft are moored with their own gear. Vessels up to 500 feet in length can at present be accommodated at two of the buoys and vessels up to 475 feet in length at three buoys. Further developments are taking place with the object of making the port into a first class harbour. The port is connected with the hinterland by rail and water transport. The Railway facilities will probably be increased in the course of the next few years, and this circumstance will further enhance the importance of the Port to the planting and producing Districts of South India.

Vizagapatam Harbour Project.

Even more pregnant with future possibilities is the scheme for the development of the Vizagapatam harbour. The Vizagapatam Harbour is constructed under the control of the Government of India. Proposals for the development of the port at this place have been under consideration since 1898 but the success of the project is bound up with the construction of direct railway communication between Vizagapatam and the Central Provinces for the quantity of trade which could be obtained from the littoral itself is insufficient to justify the capital expenditure which would be required. In May 1925 the Government of India declared Vizagapatam a major port thereby enabling the development of the port under the directions of the Central Government. Preliminary operations commenced in the end of the year and were continued vigorously in 1926 with the aid of dredgers and rock breakers. It is expected that the construction of the harbour will take four or five years. The surrounding hill-sides and adjacent areas will meanwhile be developed for industrial trading and residential purposes.

Local Self Government

Local bodies in the Madras Presidency are administered under the following Acts—
The Madras (31) Municipal Act 1911
The Madras District Municipalities Act 1920, as amended by Madras Act X of 1930 and
The Madras Local Boards Act 1920, as amended by the Madras Act XI of 1930.

The amending Acts of 1930 which came into force on the 26th August 1930 provide *inter alia* for the abolition of the system of nominations to local bodies for the inclusion of village panchayats within the scope of the Madras Local Boards Act with a view to making the village the unit of local self government for direct elections to district boards for the provincialisation of officers and servants of local boards and municipal councils for the removal or the disqualification of women as such in respect of elections to municipal councils and for the cessation of office of the President or Chairman on a motion of non confidence being passed against him.

2. Local bodies are now enabled to levy a tax on entertainments given within their jurisdiction under the Madras Local Authorities Entertainments Tax Act 1926.

Irrigation

In March 1929, the Secretary of State sanctioned the Cauvery Reservoir Project, the estimated cost of which amounted to 2½ millions. The project has been framed with two

main objects in view. The first is to improve the existing fluctuating water supplies for the Cauvery Delta irrigation of over a million acres the second is to extend irrigation to a new area of 801,000 acres which will, it is estimated add 150,000 tons of rice to the food supply of the country. The scheme which is expected to be completed before 1934 provides for a large dam at Mettur on the Cauvery to store 92,500 million cubic feet of water and for a canal nearly 85 miles long with a connected distributary system. Owing to the necessity for providing adequate surplus arrangements to dispose of floods similar to the phenomenal floods of 1924 and to other causes the estimate had to be revised and the revised estimate stands at about \$ 55 millions. Another important project is the Periyar project which is intended not only for irrigation purposes but also for providing water power for generating electricity. Taking its rise in the Western Ghats the river flows into the Arabian Sea through Travancore State territory. After prolonged negotiations, the Travancore Durbar consented to the water being caught and stored in the Travancore hills for being diverted towards the East. Some three thousand feet above sea-level a concrete and masonry dam has been constructed and nearly 50 feet below the crest-level of the dam a channel through the summit of the range carries the waters into the eastern water-shed where they are led into the river Vaigai. The total quantity of water impounded to crest level is 15,000 million cubic feet. By this work a river ordained by Nature to flow into the Arabian Sea has been led across the Peninsula into the Bay of Bengal irrigating in its way well over 100,000 acres of land. The irrigable area commanded by the Periyar system is 143,000 acres while the supply from the lake was sufficient only for 180,000 acres. To make up for this deficit Government contemplate increasing the effective capacity of the lake by lowering the water-shed cutting. The area already under irrigations in the Madras Presidency totals 7 million acres. Of this, over 3 million acres are served by petty irrigation works numbering about 35,000.

Electric Schemes

The Pykara Hydro Electric Project has been before the Government of Madras for some years. The proposal is to utilise a fall of over 8,000 feet in the Pykara River as it descends the Nilgiri Plateau, for the generation of electrical energy and its transmission for supply to the neighbouring districts viz., the Nilgiris and Coimbatore. At a later date it is hoped to include Madras, Trichinopoly, Madurai, Salem, Calicut, Cochin, Tanjore and other districts. The Chief Engineer for Hydro Electric Development is of opinion that it may be possible to include Madras in the Pykara Supply system.

Originally it seemed that the Pykara Scheme must depend for part of its load on the Railways coming in. But later, it became evident that the scheme would be remunerative even without a demand from the Railways for power. After considerable discussion the Madras Government submitted three alternative schemes to the Government of India, two of which assumed the electrification of certain sections of the South Indian Railway while the third was independent of the electrification of any of

the main lines. While these proposals were before the Government of India and the Secretary of State, the Railway Board decided against railway electrification at present. The Secretary of State has therefore sanctioned the third scheme which provides for a small railway loop and could be used for the electrification of the Nilgiri Mountain Railway in addition to the expected demand for Municipal lighting etc., and for power in industries. Work has been started and the scheme is expected to be completed by the end of 1932.

The total cost of the project is estimated at 1,26,39,000 at the beginning rising to Rs 1,38,00,000 in the tenth year. As at present surveyed the demand for power is estimated at 6,54,000 units in the first year rising to 35,182,000 in the tenth year.

The Glen Morgan Scheme sanctioned in August 1928 at a cost of about 12 lakhs has been completed and is now in operation. It is auxiliary to the main Pykara scheme and will be merged with it. Its chief function is to supply power to the main construction works the surplus power will be supplied to Ootacamund, Coonoor and other neighbouring towns and certain tea estates.

A small scheme to supply electric power to Salem and Erode from Mettur till the Pykara scheme comes into operation was sanctioned in April 1930 at an estimated cost of Rs 5.50 lakhs. It is hoped to supply power to these towns by June 1931.

The Government have under consideration the question of issuing regulations for the distribution and sale of electrical energy generated from a Government Hydro Electric source, whereby an electric service, at low rates will be assured to the ultimate consumer and the power market properly developed.

Co-operation.

The attention of the Department was paid more to the consolidation of existing societies than to the expansion of the movement and so there was a decrease in the number of societies newly registered in 1928-29. Improvement in the state of societies is evidenced by an increase in the number of members in the amount of share capital working capital and of reserve fund. The increasing efficiency of the supervising unions, utilised by the Department in the rectification work of the existing societies. There was an increase in the number of agricultural non-credit societies and an improvement in their trading activities. 15 milk supply societies were registered during the year. The Government have sanctioned subsidies to Co-operative Institutes, District Federations to enable them to conduct training classes. The Government have passed orders on most of the important recommendations of the Committee on Co-operation. The staff of the Department both superior and subordinate has been strengthened.

Social Legislation.

The Hindu Religious Endowments Act which has for its object the better administration and governance of certain Hindu religious endowments came into force early in 1925. It provides for the appropriation of the surplus funds of the endowments to religious, educational and charitable purposes not inconsistent with the objects of the institutions to which

they are attached. The Act has been working satisfactorily. Doubts having been raised to the validity of the Act it was re-enacted and passed into law as Act No II of 1927. The new Act came into force on 8th February 1927. Another piece of legislation—a non-official Bill—which has raised a heated controversy is the Malabar Tenancy Bill which aims to confer subject to certain conditions occupancy rights on kanam tenants and actual cultivators of the soil. As there was a sharp difference of opinion on the very principles of the Bill the Governor withheld his assent and a committee was appointed to go into the matter thoroughly and its findings have been submitted and the same have been published with a view to receive objections and suggestions. The recommendations of the Committee were placed before a Round Table Conference consisting of the representatives of the Jemmes Tenants and of the Government. The objections and suggestions made by the representatives at the Conference were carefully considered by the Government and the Government re-drafted the Bill and introduced it in the Council on 6th August 1929. The Bill was passed by the Council on 10th October 1929. His Excellency the Governor was of opinion that changes were expedient in respect of certain clauses of the Bill passed by the Council and has accordingly returned parts of the Bill to the Legislative Council under Section 81 A (1) of the Government of India Act for reconsideration. The Bill was finally passed by the Legislative Council on the 1st March 1930 and received the assent of His Excellency the Governor on the 28th March 1930. The assent of His Excellency the Governor-General to it is awaited. Note worthy amongst other efforts at legislation for social reform was the non-official resolution passed by the Council recommending to Government to undertake legislation or to recommend the Government of India to do so to put a stop to the practice of dedicating young women and girls to Hindu temples which has generally resulted in exposing them to immoral purposes under the pretext of caste. Mrs. Muthulakshmi Reddi, Ex Deputy President of the Legislative Council introduced a bill in the Legislative Council on 5th September 1928 so as to enfranchise or free the lands held by man-holding Devadasis on condition of service in Hindu temples from such condition. The bill was passed into law on 1st February 1929. The Act received the assent of the Governor on 12th April 1929 and of the Governor-General on 13th May 1929. Rules have been framed to give effect to the provisions

of the Act and the enfranchisement of Devadasi houses is now in progress. On 24th January 1930 Mrs. Muthulakshmi Reddi introduced another bill in the Legislative Council with the object of putting an end to the dedication of young women and girls not only among man-holding Devadasis but among Devadasis as a whole. The bill was discussed in the Council and circulated to elicit opinion. As in the meantime Mrs. Muthulakshmi Reddi resigned her membership in the Council, the bill was not proceeded with. Subsequently the Council also dissolved and the bill lapsed. A bill for the suppression of brothels and of traffic in women and girls was introduced in the Council by Mr. K. R. Venkataranga Aiyar on 6th September 1928 and was passed into law on 31st January 1930. The Act received the assent of the Governor on 24th February 1930 and of the Governor-General on 28th March 1930. It has not however been brought into force yet owing to certain practical difficulties. Proposals are now under consideration for amending the Act so as to make it workable. It was also resolved to ask Government to fix as their goal local prohibition of drink in the presidency within 20 years. In pursuance of this resolution and of the recommendations of the Excise Advisory Committee thereon, Government have in 1929 sanctioned a scheme of propaganda against the use of alcoholic liquors and intoxicating drinks.

Law and Order

The Superior Court for Civil and Criminal judicial work in the Presidency is the High Court at Madras, which consists of a Chief Justice and thirteen puisne judges. The existing law provides for a maximum of 20 High Court Judges. For the administration of criminal justice there are 26 Sessions Judges in the Mufassal, Additional and Assistant Sessions Judges being provided to assist Courts in which the work is heavy. Then there are the District Magistrates the Subordinate Magistrates and Honorary Magistrates. The administration of civil justice is carried on by 26 District Judges, and 45 Subordinate Judges and 154 District Munsifs. In the Presidency Town there are a City Civil Court consisting of one Judge and Small Causes Court consisting of a Chief Judge and two other Judges. Madras is a litigious province and the records show one suit for every 80 persons. The Police department is under an Inspector-General who has four deputies in four ranges of the Presidency a Superintendent being stationed at each District. The sanctioned strength of the permanent police force is about 27,700.

The Bengal Presidency.

The Presidency of Bengal, as constituted on the 1st April 1912 comprises the Burdwan and Presidency divisions and the district of Darjeeling which were formerly administered by the Lieutenant-Governor of Bengal, and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assam. The area of the Presidency is 82,277 square miles, and it possesses a population of 47,592,462 persons included within this area are the two Indian States of Cooch Behar and Tripura, which are now placed in direct political relations with the Government of India. The Governor of Bengal in Council acts as Agent to the Governor-General of India for these States. The area of the British territory is 76,848 square miles. Bengal comprises the lower valleys and deltas of the Ganges and Brahmaputra, and in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. In the north are the Himalayan mountains and submontane tracts of Darjeeling and Jalpaiguri, and on the south-east the hills in Tripura and Chittagong, while on the west the Chota Nagpur plateau is continued by an undulating tract running through the western portions of Midnapur, Bankura, Burdwan and Birbhum. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People.

Of the inhabitants of the Presidency 25,458,124 or 53.5 per cent are Mahomedans and 20,809,148 Hindus. These two major religions embrace all, but 2.73 per cent of the population. Christians, Buddhists and Animists combined number 1,278,873.

Bengali is spoken by ninety-two per cent. of the population of the Presidency and Hindi and Urdu by 8.8 per cent. The Oriya-speaking people number 298,878 and Nepali is the tongue of 93,040 persons principally residents in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

Industries.

According to the returns of the Census of 1921 nearly 87 millions or over 77 per cent of the population derive their support from pasture and agriculture, and of these more than 80 millions are cultivators, and more than 4 millions farm servants and field labourers. The area under jute in 1920 is estimated at 3,062,300 acres against 3,020,566 in 1929. Bengal is the most important rice-producing area in Northern India, and it is computed that 84 per cent. of the cultivated area of the Presidency is devoted to its production. Other crops include barley, wheat, pulses and oil seeds. The area devoted to the last named in 1929-30 being 1,025,800 acres. Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1928 was

201,100 acres. There were 344 plantations employing a daily average of 181,324 permanent and 10,676 temporary hands.

Manufacture and Trade

The main industries in this part of India in addition to the agricultural industry are the jute mill industry, the tea industry (largely an Assam industry) and coal mining. The jute mills in and around Calcutta constitute the principal manufacturing industry of the Presidency.

The mills reverted from a 60 hour to a 54 hour week on 30th June 1930, the agreement reached by the Jute Mills Association being that a 54 hour week would be worked from that date up to 31st December 1931. In addition, all mills are now closed down for one complete week each month. This commenced in July 1930 and the agreement is that it will be continued up to March 1931.

A census of the looms in the mills attached to the Association was taken in July 1930 and the number was found to be 38,859. In the mills not attached to the Association the number is 1974. The total looms therefore, on 1st January 1931 is 59,713.

General.—The trade of Bengal during the year 1929-30 sustained a general set-back due in the main to the depression in world trade, and the resultant fall in the commodity prices.

The total aggregate value of the overseas trade of the province (excluding treasure) amounted to Rs 258 crores which fell short of the last year's figures by about Rs 25 crores. This decline was due to less receipts under both imports and exports. On the import side, the most noteworthy decline was under grain, pulses and flour, metal and ores, cotton piece-goods, motor cars, provisions, oilman's stores and salt and, that on the export side under raw jute and jute manufactures, lac hides and skins. The tonnage handled by the Calcutta Port Commissioners, however, increased a little.

Imports.—The imports of merchandise during the year 1929-30 totalled Rs 86 crores against Rs 91 crores in 1928-29. Imports of cotton goods, which forms the largest item of the trade, was again disappointing, the total value diminishing by about a lakh of rupees from Rs 24.10 to Rs 23.13 89 lakhs. This falling off was due to an all round decline in the imports from the United Kingdom and also to the diversion of a considerable portion of the goods to Karachi on account of the embargo imposed in 1928-29 on certain classes of British goods by certain classes of traders in Calcutta. But, in spite of this, the United Kingdom retained her premier position in the trade. Japan improved her share of the trade in all its departments at the cost of the former country. The decline in the United Kingdom's supplies was the result of weaker demands throughout the year due to uncertainty in the political situation. But the most potential injury to her trade was done through the misunderstanding that arose out of the enquiry held into the question of external competition.

in the cotton piecegoods trade of India. This enquiry began in July and soon after, an impression got abroad that a heavy protective duty would, as a result of the enquiry, be imposed on the coarser qualities of imported goods, and in spite of a substantial reduction in the prices of raw cotton from the month of August very little forward business was done. The result was that the trade in standardised Japanese grey goods continued to forge ahead at a rapid pace while the British grey shirting almost disappeared from the market. Imports of twists and yarns improved slightly due to increased supply of coarser yarns by China. The supply by the United Kingdom declined by about a million pounds. The motor trade of Bengal also met with a similar reverse. The total value of motor cars omnibuses etc. declined from Rs 1,92,16 lakhs to Rs 1,62,94 lakhs and that of tyres and tubes from Rs 51,12 lakhs to Rs 41,71 lakhs. This decline did not however connote any slackening of Bengal's demand for motor vehicles, but to a growing tendency on her part to get her supplies direct from Bombay. The Assembly Plant in Bombay also did a considerable injury to this trade of Bengal, as it supplied a large number of cars and chassis by sea to Calcutta and its immediate neighbourhood. A noteworthy feature of the trade was that for the first time Germany supplied 33 cars to the value of Rs 14 lakhs. The gross value of imports of machinery and mill work also contracted from Rs 6,93 lakhs to Rs 6,69 lakhs due to heavy decline in the value of imports of paper-making machinery from Rs 80 lakhs to Rs 6 lakhs sugar machinery from Rs 17 lakhs to Rs 5 lakhs, tea machinery from Rs 27 lakhs to Rs 16 lakhs, cotton machinery from Rs 24 lakhs to Rs 19 lakhs, and foundry and workshop machinery from Rs 64 lakhs to Rs 41 lakhs, while the increased imports of prime movers from Rs 89 lakhs to Rs 131 lakhs boilers from Rs 68 lakhs to Rs 71 lakhs jute mill machinery from Rs 130 to Rs 145 lakhs, and paper-making machinery from Rs 4 lakhs to Rs 11 lakhs failed to balance. The United Kingdom was as usual, the principal supplier of these machines but her actual contribution shrank a little from Rs 572 lakhs to Rs 563 lakhs. Imports of iron and steel covered by protective tariff also fell from Rs 9,39,70 lakhs to Rs 8,61,66 lakhs, but that of non-protected materials improved from 91,967 tons to 93,863 tons and metals and ores from Rs 220 lakhs to Rs 241 lakhs. There was also considerable improvement in the imports of papers and paste boards, the value of which rose from Rs 1,05,41 lakhs to Rs 1,21,19 lakhs, and, stimulated by lower prices those of sugar also rose from Rs 559 lakhs to Rs 600 lakhs. Due to increased supply by the United States of America and Burma imports of mineral oil (including Kerosene) improved in value, from Rs 7,39,76 lakhs to Rs 8,65,05 lakhs. Of the other articles, imports of liquors, salt, tobacco, drugs, medicines and chemicals, beads and pearls, phials and bottles, silk and artificial silk, lac, spices, boots and shoes, musical instruments, electric appliances, and tea chests improved, while those of glass bangles, woollen goods, grain, pulse and flour, provisions, oilman's stores, and coconut oil declined.

Exports—Exports of merchandise from the port of Calcutta sustained a further decline from 137 crores to Rs 127 crores. Despite the low level of the prices of raw jute throughout the year, this principal or, in fact, the monopoly trade of Bengal met with a considerable set-back due to the world wide trade depressions. The total shipments of both manufactured and raw jute amounted to Rs 77,60,93 lakhs against Rs 87,58,56 lakhs in the year 1928-29. This contraction in the trade had its repercussions on the business of the Indian Jute Mills, whose profits declined from Rs 7,23 crores to Rs 26 crores. The year opened with the price of first marks of raw jute ruling at Rs 69 per mark of 400 lbs and by October it fell to Rs 59. Thereafter the prices began to fall rapidly and by the end of the year it settled down to Rs 45 per bale. But in spite of this low level of the prices exports of raw jute declined by about five lakhs of bales in quantity and from Rs 30,76,96 lakhs to Rs 25,75,88 lakhs in value, shipments of manufactured jute (gunny bags and gunny cloth and twist) however, improved in quantity from 9 to 9½ lakhs tons, but the value due to low prices of raw jute declined from Rs 56,81,60 lakhs to Rs 51,88,00 lakhs. The tea industry of Bengal made record strides during the year 1928-29. Aided by favourable weather conditions and ample supplies of labour, there was a record production of tea the total output coming up to 371 million lbs against 341 million lbs in the previous year. But, in spite of all these favourable conditions the year did not prove to be a very successful one from the financial point of view for, owing to the continued over production by all the tea producing countries prices generally ruled low. The average price per lb according to the shipping bill, came to 10 annas 10 pies only against 11 annas 8 pies in the previous year and 14 annas 5 pies in 1927. The price of tea dust also ruled very low. The total quantity of tea exported from Calcutta amounted to 247,352,676 lbs valued at Rs 16,78,75 lakhs. The United Kingdom, which is practically the world's market for tea, continued to be the chief customer by absorbing 78 per cent of the total shipments against 75 per cent in the previous year. The noteworthy features of the trade were the heavy decline in the shipments to China and direct shipments to Russia, whose takings advanced considerably. The trade in shellac fell off considerably, the exports declining in value from Rs 8,47,96 lakhs to Rs 6,88,74 lakhs. The trade in hides and skins was also very disappointing the total exports declining to 27,104 tons only which but for those of 1920-21 was the lowest for many decades past. Considerable progress was noticeable in the trade metals and ores. Shipments of manganese ore improved in value from Rs 116 lakhs to Rs 123 lakhs, and those of pig iron rose from Rs 2,11,81 lakhs to Rs 2,59,88 lakhs. There was also considerable improvement in the shipments of scrap iron and steel and lead, while those of tin, zinc and other metals declined. Similar advancement was noticed in the case of oil seeds, the total value under all the heads improving from Rs 2,83,68 lakhs to Rs 4,73,88 lakhs. Due to the price of, boiled rice ruling lower than similar products

from Burma and Saigon, exports of rice from Bengal improved from 106,884 tons to 120,021 tons, while the exports of wheat, barley and pulse declined. The year also recorded considerable improvement in the business of mica, the exports of which advanced from Rs 74 24 lakhs to Rs 85 00 lakhs. Exports of manures, paraffin wax, spices, drugs and medicines and gins improved while those of opium, dyeing and tanning substances, woollen manufactures, and salt petro declined.

Trade of Chittagong—A considerable portion of the maritime trade of Bengal is also carried on through the port of Chittagong. There was a considerable decline in the business of this port as well, the imports declining from Rs 2 95 lakhs to Rs 2 07 lakhs, and the exports from Rs 7 39 to Rs 6 64 lakhs.

Distribution of the foreign trade of Bengal—The United Kingdom was the principal participant in the trade of Bengal her share amounted to 49 34 per cent of the total imports and 21 28 per cent of the total exports against 51 03 and 19 46 per cent respectively in the year 1923-29. The British possessions appropriated 8 99 per cent of the imports and 14 86 per cent of the exports. The United States had 6 49 per cent of the imports and 22 62 per cent of the exports. Japan's share on the import side amounted to 10 03 per cent and on the export side 3 02 per cent while that of Germany amounted to 4 97 per cent of the former and 7 80 per cent of the latter.

Administration

The present form of administration in Bengal dates from January 1921. In 1912 the Government of the Province underwent an important change, when, in accordance with the Proclamation of His Majesty the King Emperor at Delhi, the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council thus bringing it into line with the Presidencies of Madras and Bombay. In 1921 under the Reform Scheme, the Local Government was reconstituted, certain of the departments being placed under the control of Ministers appointed from among elected members of the Legislative Council. There are normally four members of the Executive Council who are in charge of the "reserved subjects, and three Ministers who are in charge of the transferred subject.

Bengal is administered by five Commissioners the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the gathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta, in other matters they are under the direct control of Government.

Justice

The administration of Justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 10 Puisne judges including one additional judge who are Barristers, Civilians or Vakils. Below the High Court are the District and Additional Judges, the Small Causes Court and Subordinate Judges and Munsiffs. Of these officers the District and Additional Judges and a certain number of subordinate Judges are also endowed with the powers of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates. On its appellate side the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has six Stipendiary Presidency Magistrates including two temporary Additional Magistrates one of whom is in charge of the Traffic Court and the other in charge of the Children Court. It has also two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with Judges who dispose of cases of the class that are usually heard in County Courts in England.

In addition a number of Union Benches and Courts have been established in selected rural areas for the disposal by honorary agency of petty criminal cases and civil disputes.

Local Self-Government.

By Bengal Act III of 1884 which regulates municipal bodies in the interior and its subsequent amendments the powers of Commissioners of municipalities have been increased and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions, employment of Health Officers and Sanitary Inspectors and the training and employment of female medical practitioners. The Commissioners also have large powers in regard to the water supply and the regulation of buildings. The municipal Government of Calcutta is governed by Act III of 1923. This Act, which replaced Act III of 1899 makes the Corporation paramount in matters relating to municipal administration. The Act provides for the appointment of a Mayor who replaces the Chairman of the old Act, a Deputy Mayor, an Executive Officer, and Deputy Executive Officer, all elected by the Corporation. The appointment of the Chief Executive Officer is subject to the approval of Government. The total number of councillors is 85, with 5 aldermen, elected by the councillors. Ten of the councillors are nominated by Government, and by the general or special constituencies. There are separate constituencies for Mahomedans. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers, with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1919 introduced the new system of self-government by a creation of village authorities vested with the power and duties necessary for the management of village affairs and entrusted with powers of self taxation. The new village authority, called the Union Board, replaces the old *Chaukidari panchayats* and the Union Committees and deal with the village police, village roads, water supply, sanitation, primary schools and dispensaries. The Act also empowers Government to create out of the members of the Union Boards Village Benches and Courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all Districts in the Presidency except Midnapur and up to March 1930 over 4,500 Union Boards were sanctioned, of which nearly 4,200 were actually constituted.

Public Works

The Public Works Department consists of P W and Railway Departments and is under the charge of Secretary to Government in the Department of Agriculture and Industries.

The P W D deals with questions regarding the construction of public buildings and roads.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways, the alignment of new lines of Railways, and with Tramway projects.

There is a Chief Engineer who is the principal professional adviser of Government.

Marine

The Marine Department deals with all questions connected with the welfare of seamen, the administration of the ports of Calcutta and inland navigation, including the control and administration of Government launches except the police launches and the Government Dockyard (Naryanganj).

Irrigation

The Irrigation Department deals with irrigation, navigation, flood protection by means of embankments and drainage, the latter including relief from congestion of drainage by regulating the available supplies of water to suit the requirements of agriculture combined with the supply of water for irrigation in cases in which a supply is available.

Police

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General, for the Dacca Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also one Deputy Inspector-General in charge of the C I D and the Intelligence Branch. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors,

head constables and constables. There is also a Village Police, composed of *daddars* and *chowkidars*, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union Board. There is a training college and school at Bardah, in the district of Rajshahi where newly appointed gazetted officers, and constables of the Bengal police learn their duties. The Calcutta City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, Sergeants, Assistant Sub-Inspectors, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. The annual cost of the Police is over 200 lakhs.

Medical

The head of the Medical Department is the Surgeon-General with the Government of Bengal, and Sanitation is in charge of the Director of Public Health, the former appointment is always held by a member of the Indian Medical Service while the latter post is not so reserved. There is also a Chief Engineer, Public Health Department, Bengal. In the districts the Civil Surgeons are responsible for medical work. There are 40 hospitals and dispensaries in Calcutta 10 of which are supported by the Government and 6,36,283 persons were treated at these institutions of whom 51,258 were in patients. In the mofussil districts there are 1,085 hospitals and dispensaries, the number of patients treated in them as well as in several huts, *fatras*, *medias*, subsidised and temporary dispensaries and in various medical centres was 80,47,802. This includes 76,378 in patients.

Education

In the Presidency of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains four Arts Colleges in Calcutta (of which one is a college for women, one is for Mahomedans and one the Sanskrit College) one at Hughli, one at Krishnagar, three, including the Islamia Inter Colleges, at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English and 5 normal schools, one in each division, for the training of teachers in secondary schools through the medium of the vernacular also an engineering college at Bihpur and an engineering school at Dacca, two medical colleges, a veterinary college, a school of art and a commercial school in Calcutta, and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore, and also at certain other mofussil centres, English high schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are five Government high schools for boys, two of which are attached to the Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh, Comilla and Chittagong. The other secondary schools,

with the exception of a few middle schools managed either by Government or by municipal and district boards are under private control. The administration of primary education in all areas, which are not under municipalities rests with the district boards grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above 51 institutions called *Shura Training Schools* are maintained by the Department for the training of primary school teachers. For the education of Mahomedans, there are senior *madrasas* at Calcutta, Dacca, Chittagong, Hughli, and Rajshahi which are managed by Government. There are also certain government institutions for technical and industrial education. All institutions for technical and industrial education (except B. E. College the Alimullah School of Engineering Dacca the Government Commercial Institute and the Government School of Art, Calcutta) are now under the control of the Director of Industries. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction but schools in these areas are eligible also for grants from Government. These bodies maintain a high school at Bardwan, a high school at Santipur and a high school at Chittagong.

In 1928-29 there were in the Presidency —

RECOGNISED INSTITUTIONS FOR MALES

Institutions	Scholars
Universities	2 1,994
Arts Colleges	44 20,469
Professional Colleges	14 5,300
High Schools	1,038 268,560
Middle Schools	1,897 168,207
Primary Schools	41,240 1,661,743
Special Schools	3,181 129,758

RECOGNISED INSTITUTIONS FOR FEMALES

Arts Colleges	4 353
Professional Colleges	3 43
High Schools	45 11,530
Middle Schools	67 8,877
Primary Schools	16,416 3,97,350
Special Schools	45 1,865

UNRECOGNISED SCHOOLS

Males	1,330 49,450
Females	253 8,410

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director and an Addl. Asst. Director appointed temporarily an Assistant Director for Muhammadan Education and a Director of Physical Education. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional or Second Inspectors and Assistant Inspectors for Muhammadan Education according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a District Inspector assisted by Sub-Divisional Inspectors and Sub-Inspectors of schools the latter classes of officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the Universities of Calcutta and Dacca established in 1857 and 1921 respectively administered by the Chancellor (the Governor of Bengal) the Vice-Chancellor (appointed by Government) and a number of ex-officio elected and nominated fellows. The University of Calcutta maintains a Law College, called University Law College Calcutta. Dacca University also has a Law Department attached to it. Calcutta University is mainly an examining body but it has now made itself responsible for advanced teaching for which purpose it employs an agency which is mainly distinct from the staffs of the affiliated colleges.

The percentage of scholars to the total population —

	Recognised Schools	All Schools
Males	8.61	8.81
Females	2.01	2.20
Total	5.49	5.52

The University at Dacca is of the residential type. There is a Board for Secondary and Intermediate Education at Dacca. It conducts the Matriculation and Intermediate Examinations for the students of institutions at Dacca and also the Islamic Matriculation and Intermediate Examinations.

The education of Europeans is mainly conducted by private agency, assisted by Government grants. Government however maintain a special Inspector, and also a school for boys a school for girls (both residential) at Kurseong, and attached to the latter a Training College (for women only).

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the east and south-east by Bihar, on the south by two of the Chota-Nagpur States of the Central India Agency and the Sagar district of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Birmoor, and Jubbah, and by the Punjab. Their total area amounts to 105,295 square miles, to which may be added the area of the two Indian States of Tehri and Rampur, both of which lie within the United Provinces, 5,392 square miles and the newly-created State of Benares with an area of 875 square miles, giving a total of 113,562 square miles. The total population is 46,510,668.

The Provinces, originally termed the North Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country portions of the Himalayas, including the Kumaon division which consists of three hill districts, two of which are entirely in the hills and one is half in the submontane belt, the sub-Himalayan tract, the great Gangetic plain, and portions of the hill systems of Central India including Bundelkhand. The Gangetic plain is protected by an extensive Canal system, which though somewhat liable to run short of water in extremely dry years, is of great benefit in all ordinary years and years of limited drought. The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west, to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Province in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the province consists of level plain, teeming with highly-cultivated fields and watered by three rivers—the Ganges, Jumna, and Gogra.

The People.

The population is mainly Hindu, 65 per cent ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being a little over 1 per cent. composed of Christians (Europeans and Indians), Jains, Aryas and Sikhs. The Aryas are the followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the Western districts of the Provinces. Most of the people, however, show

a mixed Arya-Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Bihari, Urdu, or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries

The principal industry is agriculture, which supports no less than 76.3 per cent. of the population. The soils of the Provinces fall into three groups, the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium, the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 80 to 60 inches in the hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon on semi-land tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 54 per cent of the total area in Oudh.

Manufactures.

The Provinces are not rich in minerals. Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan districts, and there were mines of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the hills. Limestone is found in the Himalayas and in the Meerut district, and stone is largely quarried in the Mirzapur district. Cotton is ginned and spun throughout the provinces, as a home industry, and weaving, by means of hand-looms, is carried on in most districts. According to the census of 1921, 100,000 persons were dependent on cotton spinning, cleaning and pressing, and 920,000 on spinning and weaving. The largest industry is in the Amargarh district, where there are 8,585 looms. Silk spinning is confined almost entirely to the district of Benares, where the famous Mubbar brocade is made. Embroidery is manufactured in Lucknow, where the noted cotton work of silk on cotton or muslin is produced, and in Benares, where gold and

river work on velvet, silk, crepe and sarsonet shawls. The glass industry is important in some districts. Benares and Moradabad are noted for their lacquered brasswork, Farrukhabad for its calico prints and Agra for its carpets and marble and alabaster articles, porcelain is manufactured in Ghazipur, and other industries are those of paper-making (Lucknow) dyeing, leather and brews. The chief centre of European and Indian industry is Cawnpore, which, situated in the most advantageous position on the Ganges, possesses tanneries, cotton, woollen and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly, Mirzapur (which produces also excellent carpets), Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly, at Allahabad there are stone works, at Ross there is a large English distillery with patent still.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farrukhabad, Moradabad, Chandauli, Bareilly, Saharanpur, Muzaffarnagar, Ghazabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur.

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform scheme the Province was raised to the status of a Governor-in-Council the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and three Ministers from Jan 12, 1926, in charge of the Transferred Subjects. The medium for the transaction of public business is the Secretariat, the Staff of which consists of 7 Secretaries and 4 Deputy Secretaries. The Director of Public Instruction is also an *ex-officio* Deputy Secretary in the Education Department. The Chief Secretary is in charge of Appointment, General Administration, Executive, Political Newspaper and Police Departments, the Finance Secretary deals mainly with the Finance Department the Revenue Secretary is in charge of the Revenue and Forest Departments and Public Works Department (Buildings and Road), the Education Secretary looks to the Education, Industries Agriculture and Excise Departments the L. S. G. Secretary to the local Self-Government, Municipal, Medical and Public Health Departments and the Judicial Secretary is in charge of the Judicial and Legislative Departments. The seventh Secretary belongs to the Public Works Department, (Irrigation Branch) and is also Chief Engineer for the Irrigation Branch of the P. W. D. Government spends the cold weather October to April, in Lucknow and Allahabad mostly in Lucknow, though the Secretariat remains throughout the year at Allahabad. The Governor and the Secretaries spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases, being the chief revenue authority in the province. There are fifty-eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,000 square

miles and average population a million. Each district is in charge of a District Officer, termed a Collector and Magistrate in Agra and a Deputy Commissioner in Oudh and Kumaon. The districts are grouped together in divisions under a Commissioner. There are ten divisions, having an average area of nearly 12,000 square miles and a population of from 5 to 6 millions. The districts are sub-divided into *tahsils*, with an average area of 500 square miles and a population of 220,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *sub tahsildars* and *hauquas* and one *sub tahsildar* to a *tahsil*. The *Kanungos* supervise the work of the *patwaris*, or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal), the District Officer assigns a sub-division consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be co-opted civilians (Joint and Assistant Magistrates and Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates). The Commissioner of the Rohilkhand and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice

Justice is administered by the High Court of Judicature at Allahabad in the provinces of Agra and by the Chief Court of Oudh sitting at Lucknow which are the final appellate authorities in both criminal and civil cases. The former consists of a Chief Justice and eight permanent and three temporary puisne judges six of whom are Indians, and the latter consists of a Chief Judge and four judges four of whom including the chief judge are Indians. There are thirty-two posts (twenty-four in Agra and eight in Oudh) of district and sessions judges of which nine Indians not belonging to the Indian Civil Service as they have been listed to the provincial service and the bar. They have both original and appellate jurisdiction in civil and criminal cases and occasional appellate jurisdiction in rent cases. District Officers and their assistants including *tahsildars*, preside in criminal courts as magistrates and as collectors and assistant collectors, in rent and revenue courts and dispose of a good deal of the work. Kumaon has been brought under the Civil jurisdiction of the High Court from 1st April 1926. The deputy and assistant commissioners exercise inferior civil powers in this division which has no separate civil courts. In the rest of the provinces there are subordinate judges judges of small cases courts and magistrates who dispose of a large number of civil suits. In Agra the jurisdiction of a subordinate judge extends to all original suits without pecuniary limit and a *munshi* can hear cases ordinarily of a value not exceeding Rs 2,000, and if specially empowered up to Rs 5,000. In Oudh the ordinary jurisdiction of a subordinate judge extends to suits valuing not more than Rs 20,000 and the ordinary jurisdiction of a *munshi* to suits of Rs 2,000

value, provided that in special cases the limit of pecuniary jurisdiction can be removed altogether in the case of a subordinate judge and that of the munsif raised up to Rs. 5,000. Appeals from munsifs always lie to the district judge while those from the subordinate judges go to the High Court or the Chief Court except in cases of a value of Rs. 5,000 or less which are heard by the district judge. Small cause court judges try suits to the value of Rs. 500. There are also honorary munsifs limited to Rs. 200 suits, and village munsifs whose jurisdiction is fixed at Rs. 20.

Local Self-Government.

The units of local self-government are the district and municipal boards which, with the exception of four municipal boards, have non-official Chairmen. The more important municipal boards have executive officers to whom certain administrative powers are reserved. The administrative functions of the municipal district boards are performed by the chairman and the secretary but the boards themselves are directly responsible for most of the administration. The district boards obtain 45% of their income from Government grants. The other chief source of income is the local rate levied from the landowners. The chief source of municipal income is the octroi or terminal tax and toll which is an octroi in modified form. Local opinion is strongly in favour of indirect as opposed to direct taxation for municipal purposes.

Public Works.

The Public Works Department is divided into the Buildings and Roads branch and the Irrigation branch. The Buildings and Roads branch is administered by a Civilian Secretary and the principal administrative officer is a Chief Engineer; the Irrigation branch is administered by two Secretaries to Government who are also Chief Engineers. The Province is divided into circles and divisions both for buildings and roads and for irrigation purposes. Each circle is in charge of a Superintending Engineer or a Deputy Chief Engineer and each division is in charge of an Executive Engineer. The whole of the irrigation works constructed or maintained by Government are in charge of the Irrigation branch. All metalled roads maintained from Provincial funds and construction of all buildings more than Rs. 30,000 are in charge of the Buildings and Roads branch. In the Irrigation branch one of the Chief Engineers is in charge of Eastern Canals comprising the Ganga Canal and canals in Bundelkhand and the other is in charge of Western Canals comprising Ganges Canal, Eastern Jumna Canal, Agra Canal and Mirzapur Canals. The Ganga Canal—a work of the first magnitude was opened in 1923 and has introduced irrigation into most of the districts of Oudh. In connection with the Ganges Canal an important hydro electric scheme the scope of which covers seven western districts of the province is nearing completion. It is capable of further development and will ultimately give a total output of 28,500 kilowatts. The energy is being distributed by means of 836 miles of High Tension lines to provide all towns of 5,000 population and over in the seven districts with cheap power for lights, fans and minor industries. The energy will also be used for irrigation pumping from rivers,

and low level canals as well as from tube and open wells. The total cost of the first stage of the scheme including pumping projects for irrigation is 140 lakhs.

Police

The Police Force is divided into District and Railway Police and is administered by an Inspector-General, with three Deputies and two Assistants, forty-six District Superintendents, three Railway Superintendents, forty-one Assistant Superintendents and sixty Deputy Superintendents. There is a Police Training School at Moradabad. There is a local C I D forming a separate detective department, under a Deputy Inspector-General with three assistants. The armed police used to be armed with the 475 musket and in certain districts to some extent also with the Martini-Henry rifle, but these arms are being replaced by the 410 musket. One of the three ranges has already been so armed. The administration of the Jail Department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education

Education is maintained in part by the State and partly by means of grants-in-aid. There are five universities, the four residential universities of Allahabad, Lucknow, Aligarh (Muslim) and Benares (Hindu) and the affiliating University of Agra. The last named was established in 1927 and consists, besides six affiliated colleges situated outside the United Provinces, of the eight colleges for men associated with the Allahabad University on its external side viz., the Agra and St. John's Colleges at Agra, the Christ Church, D.A. V. and Sanshodhan College at Cawnpore, the Mount College, Meerut, the Barilly College, Barilly and St. Andrew's College, Gorakhpur. There are a number of Intermediate Colleges which prepare boys for the high school and intermediate examinations conducted by the Board of High School and Intermediate Education, which controls high school and intermediate education. The Isabella Thoburn College at Lucknow and the Crothwaite Girls College at Allahabad impart university education to Indian girls and the Theosophical National Girls' School and Women's College at Benares teach up to the intermediate stage. The St. George's Intermediate College, Munroo, the Philander-Smith College, Naini Tal, the St. Joseph's College, Naini Tal, the Martindale College, Lucknow and the Boys Intermediate College, Allahabad, are a few of the well known institutions for European and Anglo-Indian children in the province, besides these there are many excellent private educational institutions for European boys and girls both in the hills and plains which are attended by students from all over India. Government maintain Training Colleges for teachers in Lucknow, Allahabad and Agra, and there are training departments attached to the Aligarh Muslim University and the Benares Hindu University. There is a Government Engineering College at Boorkee (Thames College), a School of Art and Crafts in Lucknow and an Agricultural College, and a Technological Institute at Cawnpore, there is also a non-Government Agricultural Institute at Naini,

Allahabad Education in law is given at the four residential universities and at the Agra and Meerut colleges, and at the Dayanand Anglo-Vedic and Sanatan Dharma Colleges at Cawnpore. Instruction in commerce for the B. Com. degree of the Agra University is given in the Sanatan Dharma and the D.A.V. Colleges at Cawnpore and in the St. John's College at Agra. The King George's Medical College, Lucknow now merged in the Lucknow University, prepares candidates for the M.B.B.S. degree of the Lucknow University. Besides this there are two medical schools at Agra for males and females. Public schools for secondary and primary vernacular education are almost entirely maintained or aided by district and municipal boards and vernacular education is almost entirely in their hands.

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals, who is assisted by a lady Superintendent for Medical aid to women in the administration of the Dufferin fund affairs. A Civil Surgeon is in charge and is responsible for the medical work of each district and in a few of the larger stations he has an assistant. In two stations (Kanikhet and Borkhee) Medical Officers in military employ hold collateral civil charge. There are 108 Provincial Medical service officers in charge of important Moffusil dispensaries and on the reserve list and a large number of Indian Provincial subordinate medical service officers. Lady doctors and women sub-assistant surgeons visit *paudanaishis* women in their own houses and much good work is done in

this manner. Maternity and Child Welfare Centres have been opened in almost all the districts of the province.

The best equipped hospitals for Indian patients are the Thomson Hospital at Agra, King George's Hospital which has a Pathological Laboratory attached to it, the Balmampur Hospital at Lucknow, the Prince of Wales Hospital, Cawnpore, King Edward VII Hospital Benares, the Civil Hospital at Allahabad (for Europeans, Anglo-Indians and Indians living in European style) and Saint Mary's Cottage Hospital, Mussoorie. The Ramnath Hospital for Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospital, King George's Medical College, Lucknow, is one of the best equipped colleges in the country, with a staff of highly efficient professors, and the hospital attached to it is the first in the Province. There are also male and female medical schools at Agra. As the K. Ray Institute at Dehra Dun has been closed, it is proposed to institute classes of instruction in X-ray diagnosis and therapy at the King George's Medical College, Lucknow, where every facility for such work would be forthcoming. There are sanatoria for British soldiers in the hills. The King Edward VII Sanatorium at Bhawal in the district of Naini Tal is an up-to-date and well equipped institution for the treatment of European and Indian consumptives. In addition five centres for the treatment of tubercular patients have been established at Agra, Allahabad, Benares, Cawnpore and Lucknow. There are mental hospitals for Indian non-criminal lunatics at Agra and Bareilly and for criminal lunatics at Benares.

THE FINANCES OF THE UNITED PROVINCES

As explained in the chapters on the new constitution of India, under the Reforms Act of 1919, the financial position of the Provinces underwent a remarkable change. The Provinces are, for all practical purposes financially independent of the Government of India. The contribution payable by the Local Government has been remitted entirely by the Government of India with effect from the year 1922-23. As the finances of the Provinces thus become of greater importance, the position is set out in some detail in the following pages —

ESTIMATED REVENUE FOR 1930-31

Principal Heads of Revenue.

	Rs
Taxes on Income	
Land Revenue	7,00,12,630
Excise	1,20,78,000
Stamps	1,81,38,000

Sir Harcourt Butler, K.C.S.I., C.I.E. 1918

GOVERNORS OF THE UNITED PROVINCES

Sir Harcourt Butler K.C.S.I., C.I.E. 1920

Sir William Marryat, K.C.I.E. 1921

Sir Alexander Muddiman, K.C.S.I., C.I.E. 1927

Sir Malcolm Hailey G.C.I.E., K.C.S.I., I.C.S. 1928

UNITED PROVINCES LEGISLATIVE COUNCIL

PRESIDENT

The Hon ble Rai Bahadur Lala Sita Ram, M A, LL.B

DEPUTY PRESIDENT — Vacant

ELECTED MEMBERS

Body, Association or Constituency represented	Name
Allahabad Jaunpur and Mirzapur Districts (Muhammadian Rural)	The Hon ble Mirza Muhammad Yusuf Bar at Law Minister of Local Self Government.
Bahraich District (non Muhammadian Rural)	The Hon ble Maharaj Kumar Major Mahjit Singh, Minister Industries and Agriculture.
Muzaffarnagar (non Muhammadian Rural)	Raja Bahadur Keshul Pal Singh M A, LL.B
Agra City (non Muhammadian Urban)	Mr Perma
Cawnpore City (non Muhammadian Urban)	Rai Bahadur Babu Awadh Behari Lal
Allahabad City (non Muhammadian Urban)	Babu Kamta Prasad Kakkar B A, LL.B
Lucknow City (non Muhammadian Urban)	Chaudhri Ram Dayal
Benares City (non Muhammadian Urban)	Chaudhri Jagannath
Bareilly City (non Muhammadian Urban)	The Hon ble Rai Bahadur Lala Sita Ram M A LL.B
Meerut-cum Aligarh (non Muhammadian Urban)	Vacant
Moradabad cum Shahjahanpur (non Muhammadian Urban)	Babu Jwala Saran Kothiwala
Dehra Dun district (non Muhammadian Rural)	Mr Tappu
Saharanpur District (non Muhammadian Rural)	Pandit Moti Lal Bhargava
Meerut District (North) (non Muhammadian Rural)	Chaudhri Ram Chandra
Meerut District (South) (non Muhammadian Rural)	Chaudhri Ghasita
Bulandshahr District (East) (non Muhammadian Rural)	Rai Bahadur Chaudhri Raghuraj Singh
Bulandshahr District (West) (non Muhammadian Rural)	Mr Arjuna
Aligarh District (East) (non Muhammadian Rural)	Rao Bahadur Bhakur Pratap Bhan Singh.
Aligarh District (West) (non Muhammadian Rural)	Rao Bahadur Thalur Bikram Singh
Muttra District (non Muhammadian Rural)	Kunwar Girwar Singh
Agra District (non Muhammadian Rural)	Rai Bahadur Munshi Ambe Prasad
Malapuri District (non Muhammadian Rural)	Chaudhri Dhirya Singh, M B E
Etah District (non Muhammadian Rural)	Rao Krishna Pal Singh.
Bareilly District (non Muhammadian Rural)	Honorary Lieut Raja Kali Charan Misra
Bijnor District (non Muhammadian Rural)	Babu Balwant Singh
Budaun District (non Muhammadian Rural)	Rai Bahadur Brij Lal Badhwar
Moradabad District (non Muhammadian Rural)	Rao Bahadur Kunwar Hardar Singh
Shahjahanpur District (non Muhammadian Rural)	Rai Sahib Manmohan Sahai
Milibhit District (non Muhammadian Rural)	Vacant.
Jhansi District (non Muhammadian Rural)	Lala Shyam Lal
Jalawn District (non Muhammadian Rural)	Babu Kamta Nath
Hamirpur District (non Muhammadian Rural)	Kunwar Jagbhan Singh B A, LL.B
Banda District (non Muhammadian Rural)	Thakur Keshav Chandra Singh, M L C, LL.B.

Body, Association or Constituency represented.	Name.
Farrukhabad District (non Muhammadan Rural)	Mr Brijnandan Lal Bar-at-Law
Etawah District (non Muhammadan Rural)	Rao Nar Singh Rao
Cawnpore District (non Muhammadan Rural)	Thakur Bishambhar Singh
Fatehpur District (non Muhammadan Rural)	Mr Bhondwa
Allahabad District (non Muhammadan Rural)	Maharao Raja Ram Singh Rao Bahadur
Benares District (non Muhammadan Rural)	Chaudhri Bharos
Mirzapur District (non Muhammadan Rural)	Pandit Shri Sadsyatan Pande
Jampur District (non Muhammadan Rural)	Raja Sri Krishna Dutt Dube
Ghazipur District (non Muhammadan Rural)	Babu Jagdev Rai
Balita District (non Muhammadan Rural)	Rai Bahadur Babu Sarju Prasad Singh
Gorakhpur District (West) (non-Muhammadan Rural)	Rai Rajeshwari Prasad M.A., LL.B.
Gorakhpur District (East) (non Muhammadan Rural)	Vacant
Beeti District (non-Muhammadan Rural)	Thakur Shiv Pati Singh
Asargah District (non Muhammadan Rural)	Thakur Ghriraj Singh B.A., LL.B.
Naim Tal District (non Muhammadan Rural)	Pandit Prem Ballabh Belwal
Almora District (non Muhammadan Rural)	Thakur Jang Bahadur Singh Bisht, B.A., LL.B.
Gorwal District (non Muhammadan Rural)	Sardar Bahadur Thakur Narayan Singh Negi
Lucknow District (non-Muhammadan Rural)	Pandit Brahma Dutt alias Bhatya Sahib
Unao District (non Muhammadan Rural)	Rai Bahadur Thakur Hanuman Singh
Bae Bareilly District (non Muhammadan Rural)	Lal Sheo Pratap Singh

Etawah, Cawnpore and Fatehpur Districts (Muhammadan Rural)	Khan Bahadur Hafiz Elmasat Hussain, B.A. Bar-at-Law.
Second Division (Muhammadan Rural)	Khan Bahadur Maulvi Saifid Hakimullah.

The Punjab or land of the five rivers, is so named from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Satlej. Together with the North West Frontier Province and the Indian State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned provinces comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,830 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 trans-frontier Baluchis) that is to say, about one-thirtieth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 800,000 souls respectively. The total population of the Province in 1921, including the Rabeah tribes on the border of the Dabru Uthul Khan District was 23,101,060 of whom 4,416,088 were in the Indian States.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Sulaiman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms the north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in character to those of the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost wholly agricultural and pastoral but it includes one large town in Simla. Of the plains of the Punjab, the eastern portion covers an area of some 86,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 54,000 square miles, with a population of a little over six millions. The rainfall in this area, heavier in the north and

east and decreasing towards the west and south is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their security against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Chenab and Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of unfertilized plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

States

The Indian States of the Punjab were formerly in the Political charge of the Punjab Government. In 1921, however, the thirteen most important States, including Patiala, Bahawalpur, Jind and Nabha, were formed into a separate Punjab States Agency under the control of the Agent to the Governor General, Punjab States. The only States remaining in the charge of the Punjab Government, are the Simla Hill States, for which the Deputy Commissioner of Simla is Political Officer, and three small States in the Ambala Division, Kahla, Patandi and Dulana, which are supervised by the Commissioner of Ambala.

The People

Of the population roughly one-half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one-half the Jats are Mahomedan, one-third Sikh and one-fourth Hindu. In distribution they are ubiquitous and are equally divided over the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion; about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the main power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organization they closely resemble the Jats and are often absorbed into that tribe. There are many minor agri-

cultural tribes, priestly and religious castes (Brahmins, Kayasths and Kurumbas), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias) and trading castes of the Mahomedans (Khojas, Parachas and Khakhais), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages.

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani, Urdu (the polished language of the towns) and other Hindi, Western Pahari, which is spoken in the hill tracts, and Rajasthan, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small proportions of the population.

Agriculture

Agriculture is the staple industry of the province, affording the main means of subsistence to 80.5 per cent. of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners and a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates 2,074,000 acres of what was formerly waste land, the Lower Shelum Canal, 431,000 acres, and the Lower Bari Doab Canal, adds 1,067,000 acres to this total. On account of the opening of the Sutlej Valley canals an area of about 1,200,000 acres more has been brought under cultivation. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 6,000 square miles. Of the crops grown, wheat is the most important and the development of irrigation has led to a great expansion of the wheat area. Next in importance to wheat is gram. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. Cotton is grown generally throughout the province. In the canal colonies large areas of American cotton are grown but in the cotton growing districts the short staple indigenous varieties are predominant. The country being preponderantly agricultural, a considerable proportion of the wealth of the peoples lies in the live-stock. Large profits are derived from the cattle and dairy trades and wool is a staple product in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries

The mineral wealth of the Punjab is small rock salt, saltpetre and limestone for road building being the most important products. There are some small coal mines in the Jhelum, Shahpur and Mianwali districts. Gold washing is carried on in most of the rivers not without remunerative results. Iron and copper ores are plentiful but difficulties of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing Province the total number of factories being only 618 the majority of which are cotton spinning and pressing factories. Cotton weaving as a domestic industry is carried on by means of hand looms in nearly every village. The Government Central Weaving Institute, Amritsar, and the Weaving Classes attached to the Government Industrial Schools at Multan, Sialkot, Hoshiarpur, Gujrat, Rohtak, Kulu, Ferozepore, Panipat and Rawari have shown considerable enterprise in improving the hand-weaving industry. The Government Demonstration Weaving Factory at Shahdara, (Lahore), which has been equipped with 100 power driven looms in addition to the latest machinery for preparatory and finishing processes started operations on 1st October 1928. Provision has been made in the factory for training about 60 apprentices in the preparatory, weaving and finishing processes. The Weaving Superintendent in charge of the factory and his staff have proved of considerable assistance to the owners of power driven looms in the province by giving technical advice on matters which require expert opinion. The Government Hosiery Institute at Ludhiana and the Institute of Dyeing and Calico Printing at Shahdara, (Lahore), are doing useful work in the development of the hosiery and dyeing and calico printing industries respectively. Blankets and woollen rugs are also produced in considerable quantities and the carpets of Amritsar are famous. Silk weaving is also carried on and the workers in Gold Silver, Brass, Copper and Earthenware are fairly numerous. Ivory carving is carried on extensively at Amritsar and Lohian as well as in the Patiala State. Mineral Oil is being extracted and refined in the Attock and Rawalpindi Districts and a cement factory is established at Wahi near Hassanabad. The Ganesh Flour Mills Coy. Ltd. Lyallpur, have installed a factory for retreating the hydrogenation of oils. Minor subsidiary industries have placed on the market boot polishers, sealing wax, metal polishers, disinfectants and soaps. Reinforced concrete pipes for sanitary and other purposes are being manufactured on a commercial scale at Lahore Cantt.

Administration.

Prior to the Amendment of the Government of India Act in 1919 the system of administration was that of a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under the Amended Act the Province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor-in-Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. The general system of provincial administration under this scheme is sketched in the section Provincial Government (p. v.) where is also given a list of the

Reserved and Transferred Subjects Associated with the Governor and the Council and Ministers is an enlarged Legislative Council, with wide powers, whose scope and authority are given under the Legislative Councils (p v) the system being common to all the major Provinces. The business of Government is carried on through the usual Secretariat which consists of five Secretaries, designated (1) Chief, (2) Home (3) Finance (4) Revenue Secretary and (5) Secretary, Transferred Departments. One Deputy Secretary four Under Secretaries and two Assistant Secretaries in the Public Works Department, there are four Secretaries (Chief Engineers) one in the Buildings and Roads Branch and three in the Irrigation Branch while the Legal Member under the Secretary to Government in the Legislative Department the heads of the Police and Educational Departments are also Under Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by five Commissioners (for Amritsar, Jullundur, Lahore, Rawalpindi and Multan) who exercise general control over the Deputy Commissioners—29 in number—each of whom is in charge of a district.

The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards) the three Chief Engineers, the Inspector General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector General of Civil Hospitals, the Director of Public Health, the Chief Conservator of Forests, the Directors of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Member.

Justice

The administration of justice is entrusted to a High Court, which is the final appellate authority to civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and eight puisne judges (either Civilian or barristers), and three additional judges including the inspecting Judge sanctioned each year for six months. Subordinate to the High Court are the District and Sessions Judges (26 in number) each of whom exercises civil and criminal jurisdiction in a civil and session division comprising one or more districts. In districts in which the Frontier Crimes Regulation is in force, the Deputy Commissioner on the finding of a Council of Elders (Jirga) may pass sentences up to seven years' imprisonment.

Local Self-Government

Local Self-Government is secured in certain branches of the administration by the constitution of District Boards, each exercising authority over a district, of Municipal, Small Town and Notified Area Committees each exercising authority over an urban area, and of Panchayats, each exercising authority over a revenue

estate or a compact group of revenue estates. The funds of District Boards are derived from a cess on the land revenue of the district supplemented by Government grants, profession taxes and miscellaneous fees, and those of Municipal, Small Town, and Notified Area Committees from octroi or terminal tax and other forms of taxation from Government grants and from rents and miscellaneous fees. The Panchayat system is an attempt to revive the traditional village community organisation the elected committee or Panchayat possessing certain powers in respect of taxation, local option civil and criminal justice the abatement of nuisances and other matters. Most of the Members of practically all local bodies are now elected and elections are usually keenly contested.

Police

The Police force is divided into District Police, Railway Police and Criminal Investigation Department. The combined force is under the control of the Inspector General, who is a member of the Gazetted force and has under him three Deputy Inspectors General in charge of ranges comprising several districts and a fourth Deputy Inspector General in charge of the Criminal Investigation Department and of the Finger Print Bureau at Phillaur. There is a Police Training School at Phillaur controlled by a Principal of the rank of Superintendent of Police. The Railway Police are under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district and has under him one or more Assistant Superintendents or Deputy Superintendents.

Education

The strides which have been made in the past decade, especially in the concluding years of the period, have brought the Punjab into line with the older and more forward provinces. The advance has not been confined to any one form of education but is spread over all grades and varieties. In addition to institutions maintained in all parts of the province by private enterprise, Government itself maintains fifteen art colleges, (including one for Europeans and another for women) five normal schools and forty four training classes and combined institutions (30 for males and 14 for females) one hundred and fourteen secondary schools for boys and girls and fifty centres for vocational training. Apart from these institutions for general education Government maintains six higher grade professional institutions, viz., the King Edward Medical College and veterinary college at Lahore, the Agricultural College at Lyallpur, the Engineering College at Multan, the Central Training College, Lahore and the Chaimford Training College at Choralagall. In addition there are 30 technical and industrial schools (25 for males and 5 for females) scattered over the province.

The Department of Education is in the charge of the Minister of Education who is assisted in the work of administration by the Director of Public Instruction.

Forests

Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 8,000 square miles.

Medical.

The Medical Department is controlled by the Inspector General of Civil Hospitals who is at present an officer of the Punjab Civil Medical Service of the rank of a civil Surgeon. The Department of Public Health is controlled by the Director of Public Health (also a member of the Indian Medical Service) who has under him five Assistant Directors of Public Health, 34 District Medical Officers of Health, and twenty eight Sanitary Inspectors in addition to a temporary Staff of variable strength engaged as required for combating epidemic diseases. The auxiliary services comprise

(1) An epidemiological bureau, which is in charge of the Epidemiologist to Government where in addition to routine bacteriological examination research work in matters bearing upon public health problems is carried out.

(2) A Vaccine Institute which manufactures antivenom vaccine lymph to meet the needs, not only of the Punjab but of the Army in Northern

India and of several provinces and Indian States in and beyond the confines of India

(3) An Education Bureau to which is attached a photographer who is an expert in cinematography

(4) A Chemical Laboratory in charge of a fully trained chemist whose duties comprise the chemical analysis of water samples and food stuff

(5) A Public Health School the staff of which is responsible for the training of health visitors and for the supervision of maternity and child welfare work throughout the province

In matters connected with sanitary works the Director of Public Health works in close touch with the Superintending Engineer, Public Health Circle, Punjab, who acts as technical adviser of the Public Health Department in engineering matters. This officer and the Director of Public Health are also the technical advisers of the Urban Sanitary Board whose duty it is to examine and report upon sanitary schemes put forward by local bodies

Burma.

The Province of Burma lies between Assam on the North-West and China on the North-East, and between the Bay of Bengal on the West and South-West and Siam on the South-East. Its area is approximately 268,000 square miles, of which 184,000 are under direct British Administration, 16,000 are unadministered and 68,000 belong to semi-independent Native States. The main geographical feature of the country is the series of rivers and hills running from North to South with fertile valleys in between widening and fattening out as they approach the Delta. Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenasserim have a rainfall of about 200 inches, the Delta less than half that amount. The hot season is short and the monsoon breaks early. The maximum shade temperature is about 96° the minimum about 60°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a rain shadow and has a climate resembling that of Bihar. The maximum temperature is twenty degrees higher than in the wet zone, but this is compensated by a bracing cold season. To the north and east of the dry zone lie the Kachin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate climate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers, the number of hill ranges (Yomas) and the abundance of forests, all combine to make the scenery of Burma exceedingly varied and picturesque.

The People

The total population of Burma at the census of 1931 was 15,169,099. There were 8,382,335 Burmans, 1,017,937 Shans, 1,220,365 Karens, 148,845 Kachins, 289,847 Chins, 800,700 Arakanese, 823,509 Telangs and 122,257 Palaungs. There is also a large alien population of 149,040 Chinese and 887,077 Indians, while the European and Anglo-Indian population numbered 25,005, and Indo-Burmans, 120,271.

The Burmans, who form the bulk of the population, belong to the Tibetan group and their language to the Tibeto-Chinese family. They are essentially an agricultural people. 80 per cent of the agriculture of the country being in their hands. The Burmese and most of the hill tribes also, profess Buddhism, but Animism, or the worship of nature spirits, is almost universal. The interest taken by the Burmese in the course of the war, their response to the call for recruits and their generous contributions to war loans and charitable funds seem to show that their sympathy towards the government of the country is giving way to an intelligent loyalty to British rule.

In appearance the Burman is usually somewhat short and thick set with Mongolian features. His dress is most distinctive and exceedingly comfortable. It consists of a silk handkerchief bound round his forehead, a loose jacket on his body and a long skirt or longyi tied

round his waist, reaching to his ankles. The Burmese women, perhaps the most pleasing type of womanhood in the East, lead a free and open life playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the men's minus the silk handkerchief on the head, and the longyi is tucked in at the side instead of being tied in front. A well-dressed and well-proportioned Burmese lady would, for grace and neatness, challenge comparison with any woman in the world.

Communications

The Irrawaddy, and to a less extent the Chindwin, afford great natural thoroughfares to the country. At all seasons of the year these rivers, especially the Irrawaddy, are full of sailing and steam craft. In the Delta the net-work of waterways is indeed practically the only means of communication. The Irrawaddy Flotilla Company, with a fine fleet of mail, cargo and ferry boats gives the Irrawaddy and the Delta rivers and creeks a splendid river service.

The Burma Railways has a length of 2,442 27 miles open line. The principal lines are from Rangoon to Mandalay from Bagdad to Myitkyna, the most northern point in the system, the Rangoon Yoma line, and the Pegu Martaban line which serves Moulmein on the further bank of the Salween River.

Industry

Agriculture is the chief industry of the province and supports nearly three fourths of the population. The net total cropped area is 16½ million acres of which nearly 2 million acres are cropped more than once. Irrigation works supply water to nearly 1 million acres. India is very largely dependent on Burma for her supplies of kerosene, benzene and petrol which rank second to rice in order of importance. Teak wood is exported in large quantities from Burma to India.

Forests play an important part in the industrial life of the Province. The forest reserves cover some 32,661 square miles while unclassified forests are estimated at about 113,350 square miles. Government extracts some 65,070 tons of teak annually, private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief, extract over 29,625 tons. Other timber extracted by licensees amounts to over 373,140 tons and firewood over 10,50,500 tons.

Tin and wolfram are found chiefly in the Tavoy and Mergui Districts. Wolfram and tin are found together in most mining areas in Tavoy the proportion varying from almost pure tin to almost pure wolfram. There was a fall in the price of tin.

There was a large increase in the output of wolfram in 1929 owing to an increase in the price of wolfram during the year. Silver, lead and zinc ore are extracted by the Burma Corporation at Rawdwin in the Northern Shan States. Copper in small quantities is also found there. There are small deposits of Molybdenite in Tavoy and Mergui and of platinum in Myitkyna. The output and value of precious stones from the ruby mines increased during 1929.

From the mines in the Hakong valley jade and amber are won. The oldest and largest oil field in the province is at Yanan gaying in Magway district where the Burma Oil Company has its chief wells. But borings in other districts have shown that the oil-bearing strata extend over a large part of the dry zone and the output from the smaller fields in Pakokki and Mawla districts is now considerable while the wells sunk in Thabeikmyin district are also showing satisfactory returns. More than two-thirds of the total production comes from the Yenangyaung and Singu fields. The Burma Oil Company take their oil to the refineries at Rangoon by pipe line from Singu and Yenangyaung. Other companies take it down by river flats. The area under rubber is 91,275 acres.

Manufactures

There are 1,064 factories over a half of which are engaged in milling rice and nearly one sixth are sawmills. The remainder are chiefly engineering works, cotton spinning mills, oil mills for the extraction of oil from groundnuts, printing presses, ice and aerated water factories and oil refineries connected with the petroleum industry. The average daily number of operatives is over 98,000. At the Census of 1941 1,930,729 or 28.48 per cent of the total population were engaged outside agriculture and production.

As is the case in other parts of the Indian Empire the imported and factory-made article is rapidly ousting the home-made and indigenous one. But at Amarapura in the Mandalay District a revival has taken place of hand silk weaving. Burmese wood carving is still famous and many artists in silver still remain, the finish of whose work is sometimes very fine. Brasses and Mandalay paravels are well known and much admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green and yellow based on a ground work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models breaking away from the conventionalized forms into which their silver work had crystallized and the new figures display a vigour and life that make them by far the finest examples of art that the province can produce.

Administration

Burma, which was at that time administered as a Lieutenant Governorship, was deliberately excluded from the operation of the Reform Act of 1919. It was felt that the Province differed so markedly from the other Provinces in the Indian Empire that its requirements should be separately considered. After repeated discussions the question was referred to a special Burma Reforms Committee, which in 1922 recommended that all the essential provisions of the Reform Act should be applied to the Province. This recommendation was accepted and its proposals became law. Under this Act Burma became a Governor's Province, with an executive council and ministers, and conforms to the provisions reconstituted under the Act of 1919 (q.v.). The main difference is in the size of the electorate. Under the Indian

Act accepted, the rural electorate is estimated at 1,728,871 and the urban electorate has been put as high as 82,478. The Legislative Council consists of 104 members of which 80 are elected and the balance nominated. Owing to the special status of women in Burma female franchise was adopted from the beginning.

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chief of the States subject to the supervision of the Commissioner, Federated Shan States, who is also Superintendent for the Southern Shan States, and the Superintendent of the Northern Shan States. The Northern and Southern Shan States were formed into a Federation on the 1st October 1922 and are designated the F. S. States. The other Shan State in Burma are subject to the supervision of the Commissioner, Sargol Division. The Civil, Criminal and Revenue Administration is vested in the Chief of the State subject to the restrictions contained in the Manual. The law administered is the customary law of the State.

Under the Governor are eight Commissioners of divisions, three in Upper, four in Lower Burma, and one in the Federated Shan States.

Justice

The administration of civil and criminal justice is under the control of the High Court of Judicature at Rangoon which consists of a Chief Justice and ten other permanent Judges. The Superior Judicial Service consists of District and Sessions Judges. There are also separate Provincial and subordinate judicial services.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times. Before the centralizing tendency of British rule made them practically subordinate officers of the administration.

Public Works

The P. W. D. comprises two Branches, viz., the B. & R. Branch and the Irrigation Branch.

The B. & R. Branch of this Dept. which is under the Ministry of Forests is administered by one Chief Engineer and one Deputy Chief Engineer. There is also a Personal Asst. to the Chief Engineer. There are seven permanent Superintending Engineers in charge of circles four of whom are stationed at Rangoon and three at Mawmye. These are officers of the administrative rank.

Those of the executive rank are the executive Engineers and Asst. Executive Engineers who number 48 on the cadre of the Indian Service of Engineers. Besides this there is also the Burma Engineering Service Class I, which has been constituted for the purpose of gradually replacing the Indian Service of Engineers, B. & R. Branch, so far thirteen appointments have been made to this latter service.

Further there are the following officers belonging to the specialist services who are stationed at Rangoon.

- (i) One Water and Sewage Engineer, (ii) Four Sanitary Engineers (iii) One Electrical Inspector (iv) Three Electrical Engineers, (v) One Consulting Architect, (vi) One Asst. Architect (vii) One Supt. of Stores (viii) One Asst. Supt. of Stores

The Irrigation Branch of the P.W.D. which is under the control of the Hon. the Finance Member is administered by the Chief Engineer P.W.D. Burma Irrigation Branch who is assisted by a Personal Asst. There are four permanent Superintending Engineers in charge of Circles two of whom are stationed at Rangoon and two at Maymyo. These are officers of the Administrative rank.

Those of the Executive rank are the Executive Engineers and Asst. Executive Engineers, who number 23 on this cadre of the Indian Service of Engineers. Besides this there is also the Burma Engineering Service, which is a Provincial Service.

Further there are also Temporary Engineers recruited locally and in England, and a River Training expert.

Police

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector-General of Police, the latter is under the orders of the Commissioner of Police, Rangoon, an officer of the rank of Deputy Inspector-General. There are five other Deputy Inspectors-General, one each for the Northern, Southern and Western Ranges, one for the Railway and Criminal Investigation Department, and one for the Military Police.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited from natives of India with a few Kachins, Karens and Chins. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force is to supplement the regular troops in Burma. Their duties, apart from their military work, is to provide escorts for specie, prisoners, etc., and guards for Treasuries, Jails and Courts.

Education

Under the Minister for Education there is the Director of Public Instruction with an Assistant Director, both belonging to the Indian Educa-

tional Service. There are nine Inspectors of Schools drawn from the Indian Educational Service, Burma Educational Service and the (class II) while the Burma Educational Service (class II) provides seven Assistant Inspectors. Two Asst. Inspectors of Schools Physical Training, have been appointed on a Temporary basis. There are also two Inspectresses of Schools. There is a Chief Educational Officer for the Federated Shan States.

A centralised, teaching and residential University for Burma, has been established in Rangoon. It now provides courses in Arts, Science, Law, Education, Economics, Engineering, Medicine and Forestry.

Schools are controlled by the Education Dept. and English is a remarkable feature of education in Burma. The system of elementary education evolved, generations ago, by the genius of the people. Nearly every village has a monastery (hpoongyi kyaung), every monastery is a village school and every Burman boy must, in accordance with his religion, attend that school, shaving his head and for the time wearing the yellow robe. At the hpoongyi kyaung the boys are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write. Vernacular Education is in the hands of Local Educational authorities.

Among special institutions, the Government Technical Institute, Insein, provides courses in Mechanical, Civil and Electrical Engineering and the Agricultural College, Mandalay, courses in Agriculture.

A liberal scheme of State Scholarships provides for the despatch of 12 scholars to Europe each year.

Medical.

The control of the Medical Department is vested in an Inspector-General of Civil Hospitals. Under him are 41 Civil Surgeons. There is also a Director of Public Health, two Assistant Directors of Public Health, the senior of whom is also Director, Public Health Institute, at which there is now a Public Analyst and to which is also attached a Malaria Bureau, an Inspector-General of Prisons, three whole-time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Mental Hospital.

There is also a Hygiene Publicity Officer.

The Pasteur Institute was opened in Rangoon in July 1915. The Director is a senior member of the Indian Medical Service.

THE FINANCES OF BURMA

In common with the other Provinces of India, the financial arrangements between the Government of India and the Government of Burma underwent a remodelling in consequence of the reconstitution of the Province on the lines of the other Indian Provinces. The Province obtained substantial financial independence. The present position is set out in the following statement —

ESTIMATED RECEIPTS FOR 1930-31

(A) REVENUE RECEIPTS—ORDINARY

	Rs.
Taxes on Income	10,95,000
Land Revenue	5,55,00,000
Excise	1,54,00,000
Stamps	73,14,000
Forest	1,75,55,000
Registration	4,00,000
Scheduled Taxes	5,70,000

	Rs
Irrigation, etc., Works with Capital Accounts	21,36,000
Irrigation etc., Works (No Capital Accounts)	1,66,000
Interest	10,05,000
Administration of Justice	14,38,000
Jails and Convict Settlements	9,69,000
Police	9,32,000
Ports and Pilotage	1,50,000
Education	6 18 000
Medical	3,48,000
Public Health	1,37,000
Agriculture	1,28,000
Industries	4,000
Miscellaneous Departments	6,19 000
Civil Works	9 46,000
Receipts in Aid of Superannuation	1 61,000
Stationery and Printing	4 03 000
Miscellaneous	3 28,000
Total (a)	10 70,83,000

(B) REVENUE RECEIPTS—EXTRAORDINARY

Extraordinary Receipts	
Total (a) & (b)	10,70 83,000

(C) DEBT HEADS

Appropriation for reduction or avoidance of debt	5,16,000
Famine Insurance Fund	
Depreciation Fund—Government Presses	71,000
Depreciation Fund—Commercial Concerns	50 000
Loans and Advances by Provincial Governments	22,70,000
Advances from Provincial Loans Fund	55,00,000
Total (c)	84 07,000
Total (a), (b) and (c)	11,56,00,000
Opening Balance	62,82,000
Grand Total	12,17,82,000

ESTIMATED DISBURSEMENTS FOR 1930-31

(A) EXPENDITURE CHARGED TO REVENUE

	Rs.
Land Revenue	66,73,000
Excise	23,84,000
Stamps	1,81,000
Forest	70,58,000
Forest Capital Outlay	8,08,000
Registration	1,27,000
Scheduled Taxes	8,000
Interest on Works with Capital Account	23,61,000

	Rs
Other Revenue Expenditure	8 00,000
Construction of Irrigation Works etc.	9,89,000
Interest on Ordinary Debt	22,21,000
Interest on other Obligations	75,000
Appropriation for reduction or avoidance of debt	5 16,000

Bihar and Orissa.

Bihar and Orissa lies between 19°-22° and 27°-30° N. latitude and between 82°-81° and 88°-28° E. longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal, on the east by Bengal and the Bay of Bengal, on the south by the Bay of Bengal and Madras, and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Governorship of Bihar and Orissa is 83,180 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south west of the Province and which under the names of the Feudatory States of Orissa and Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Political Agent and Commissioner, Orissa Feudatory States. The area of these territories is 28,656 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111,836 square miles. Two of the provinces of the Governorship of Bihar and Orissa, viz., Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur, is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south-east and walled in on the north west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions, with headquarters at Patna, Munaffarpur (for Tirhut), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People.

The headquarters of Government are at Patna. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna," the old town being called "Patna City."

The Province has a population of 37,061,853 persons which is very little less than that of France and rather more than that of the Bombay Presidency. The province is almost entirely rural, no fewer than 963 in every 1,000, live in villages. Even so with 330 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only three towns which can be classed as cities, namely, Patna, Gaya and Bhagalpur. During the last thirty years the population of Patna has been steadily diminishing. Hindus form an overwhelming majority of the population. Though the Muhammadans form less than one-tenth of the total population they constitute more than one-fifth of

urban population of the province. Animists account for 6.16 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north easterly direction.

Industries.*

The principal industry is agriculture, Bihar more especially North Bihar being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,094,000 acres or about 48 per cent of the cropped area of the Province. Wheat is grown on 1,185,100 acres, barley on 1,385,500 acres, maize or Indian-corn on 1,644,700 acres, the latter being an autumn crop. Oil-seeds are an important crop, the cultivation having been estimated by the demand for them in Europe. It is estimated that 2,037,000 acres of land are annually cropped with oil seed in the Province. There is irrigation in Shahabad, Gaya, Patna and Champaran districts in Bihar and in Balasore and Cuttack in Orissa. The Indigo industry is steadily on the decline, the total area sown having decreased from 842,000 acres in 1896 to 25,000 acres in 1923. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale. Its place as a crop manufactured for export has been largely taken by sugarcane, the cultivation of which has been considerably extended owing to the high prices given by sugar factories. In the district of Purnea and in Orissa, and parts of the Tributary Division jute is grown but the acreage varies according to the price of jute. The last serious famine was in 1895-96 but there was a serious shortage of foodstuffs in the south of the Province in 1910. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *Ashu*, due towards the end of September or up to middle of October. Rain at this time not only contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures.

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsula Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. The Tata Iron and Steel Works at Jamshedpur in Singhbhum district are also one of the largest in the world and numerous subsidiary industries are springing up in their vicinity. The most important of these are the Tinsley Company of India, Agricultural Implements, Ltd. and

* The figures given in this paragraph relate to British territory only.

Cable Company of India, Enamelled Ironware, Limited, and Indian Steel Wire Products. The population of Jamshedpur is rapidly approaching 100,000 and it consumes 1½ million tons of coal annually. This part of the province has also some of the richest and most extensive iron mines in the world and supplies the iron and steel works in both Bengal and Bihar and Orissa with raw materials, but the raising of coal is still the most important of the mineral industries in the province. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years, while valuable new fields are being developed at Ramgarh, Bokaro and Karanpura in Hazaribagh. This same district is the most important mica mining centre in the world both on account of the quality as well as the size of its output. Manbhum, Palaman Ranchi, the Santal Parganas and Gaya are also the chief centres for the production of lac and the manu- facture of shellac the latter of which is exported from India to the value of ten crores annually.

Administration

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant-Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship, with an Executive Council and Ministers. The principles of the provincial administration are fully explained in the section The Provincial Governorships, where the division of the administration into Reserved Subjects, in charge of the Governor and his Executive Council, and Transferred Subjects, in charge of the Governor and Ministers chosen from the Legislative Council, is set out in detail. In all these respects Bihar and Orissa is on the same plane as the other Provinces in India.

Public Works.

The Public Works Department in the Province of Bihar and Orissa consists of two separate branches, viz. (1) the Buildings and Roads and (2) Irrigation which also deals with railways. Each has a Chief Engineer, who is also Secretary to the Local Government with an Engineer Officer as Under-Secretary in the Buildings and Roads branch and a non-professional Assistant Secretary, in the Irrigation branch under him. The electrical work of the Province is carried out by an Electric Inspector and an Electrical Engineer and a staff of subordinates.

Justice

The administration of justice is controlled by the High Court of Judicature at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsifs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognisable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 4,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the

appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the non-regulation districts the Deputy Commissioner and his subordinates exercise civil powers and hear rent suits.

Land Tenures.

Estates in the Province of Bihar and Orissa are of three kinds, namely, those permanently settled from 1793 which are to be found in the Patna, Tirhut and Bhagalpur divisions, those temporarily settled as in Chota Nagpur and parts of Orissa, and estates held direct by Government as proprietor or managed by the Court of Wards. The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Permanent Settlement Act. Further, the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement operations in the various districts both permanently and temporarily settled. In the former, the rights of the under tenants are recorded and attested, while in the latter there is the re-settlement of rents. In the re-settlement proceedings, rents are fixed not only for the landlords but also for all the tenants. A settlement can be ordered by Government on application made by land lords or tenants.

The tenures of Orissa are somewhat different under the zamindars, that is, the proprietors who took settlement from Government and pay revenue to Government direct, is a class of subordinate proprietors or proprietary tenure holders, who were originally village headmen dealing more or less direct with the revenue authorities. They have a variety of names, such as *mekhadem, padhan, mearwar, sarbarbar, pargana, khairidar* and *shikmi zamindar*. These sub-proprietors or proprietary tenure holders pay their revenue through the zamindars of the estates within which their land lies. In Chota Nagpur and the Santal Parganas, the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Both Orissa and Chota Nagpur have their own Tenancy Acts. In the district of the Santal Parganas, the land tenures are governed by Regulations III of 1872 and II of 1886.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are four Deputy Inspectors-General and 20 Superintendents. There are also 26 Assistant Superintendents of Police and 28 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and

distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious action which its assistance may be invoked. There are three companies of unmounted Military Police and one company of Mounted Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education

The position of education in the Province with the numbers attending schools, is set out in the section Education and the tables attached thereto (g v) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities. (g v)

Medical

The Medical Department is under the control of the Inspector General of Civil Hospitals who

is a Member of the Indian Medical Service. Under him there are 21 Civil Surgeons who are responsible for the medical work of the districts at the headquarters of which they are stationed. 61 Dispensaries are maintained by Government in addition to 612 Dispensaries maintained by Local bodies, Railways, private persons, etc. 6,781,880 patients including 87,158 in-patients were treated in all the dispensaries in 1929. The total income of the dispensaries maintained by Government and Local Bodies including that of the private aided institutions amounted to Rs. 40,13,563.

A large mental hospital for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution for Indians has been opened at Ranchi since September 1925 for the treatment of patients from Bihar and Orissa and Beagal. An institute for radium treatment has also been established at Patna.

A medical college has been opened at Patna and the Medical School which was in existence at Patna has been transferred to Darbhanga.

THE FINANCES OF BIHAR AND ORISSA

As Bihar now enjoys practical financial autonomy, the finances are set out in greater detail.

The Central Provinces and Berar.

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 181,861 sq. miles, of which 82,262 are British territory proper, 17,790 (viz., Berar) held on perpetual lease from H. E. H. the Nizam and the remainder held by Feudatory Chiefs. The population (1921) is 18,912,780 under British administration, including 8,075,816 in Berar. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissionership of the Central Provinces. Berar was, in 1858, assigned to the East India Company as part of a financial arrangement with H. E. H. the Nizam for the maintenance of the Hyderabad contingent and was leased in perpetuity to the Central Provinces in 1908, as the result of a fresh agreement with H. E. H. the Nizam.

The Country

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the north-west, the Vindhyan plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Narbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of "deep black cotton" soil make it one of the more important cotton tracts of India and the wealthiest part of the C. P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Further east is the far-reaching rice country of Chhattisgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The Feudatory States of Bastar and Kanker lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

The People

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by the Gonds and other primitive tribes and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their homes. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they form nearly a quarter of the whole population of the C. P. being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new comers are indicated by the language divisions of the province, Hindi, brought in by the Hindustani-speaking peoples of the North, prevails in the North and East. Marathi in Berar and the west and centre of

the C. P. Hindi is spoken by 56 per cent of the population and is the *lingua franca*. Marathi by 31 per cent and Gond by 7 per cent. The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries

When Sir Richard Temple became first Chief Commissioner of the C. P. the province was landlocked. The only road was that leading in from Jabulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the *semindari* or *landlord system*, ranging with numerous variations, from the great Feudatory chiefships, which are on this basis, to holdings of small disincorporated. A system of legislation has gradually been built up to protect the individual cultivator. Berar is settled on the *Revenue railway* system 19,645 square miles of the C. P. is Government Reserved forest, in Berar the forest area is about 8,330 square miles, the total forest area being one-sixth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 67 per cent. of the total land is occupied for cultivation, in the most advanced districts the proportion is 83 per cent. and in Berar the figure is also high. The cultivated area is extending continuously except for the temporary checks caused by bad seasons. Rice is the most important crop of the C. P. Wheat comes next, with 16 per cent., then pulses and other cereals used for food and oil-seeds, with 64 per cent. and cotton with 10 per cent. In Berar cotton occupies 80 per cent. of the cropped area, *jowar* covers 31 per cent. then wheat and oil seeds. In agriculture more than half the working population is female.

Commerce and Manufactures

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprises along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning and weaving industry. The Empress Mills, owned by *Rani* manufacturers, were opened there in 1877 and the

general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of spun yarn exported from the Province during the year ending 31st March 1929 was 2,10,438 mounds, valued at Rs. 63,18,900.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1928 employed 23,110 persons and raised 590,833 tons. Then follow coal mining with an output of 782,353 tons and 6,928 persons employed, the Jabulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, etc.

The total number of factories of all kinds legally so described was 898 in 1929 the latest period for which returns are available and the number of people employed in them 69,291. The same economic influences which are operative in every progressive country during its transition stage are at work in the C P and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away, a large development of trade has taken place. The last pre war reports showed an increase in volume by one-third in eight years.

Administration

The administration of the Central Provinces and Berar is conducted by a Governor-in-Council, who is appointed by the Crown. He is assisted by eight Secretaries and five under secretaries. Under the reform scheme the administration is conducted by a Governor with an Executive Council of two members one of whom is a non-official and two Ministers, the latter being in charge of the transferred subjects.

The local legislature consists of 73 members distributed as follows—38 elected from the O P 17 elected from Berar, 2 members of the Executive Council 8 nominated non-officials 8 nominated officials. The Governor (who is not a member of the Council) has the right of nominating two additional members with special knowledge on any subject regarding which legislation is before the Chamber. The O P is divided for administrative purposes into four divisions and Berar constitutes another division. Each of these is controlled by a Commissioner. The divisions are sub-divided into districts, each of which is controlled by a Deputy Commissioner, immediately subordinate to the Commissioner. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Director of Public Health, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner, and Superintendent of Stamps and Inspector-General of Registration and Registrar-General of Marriages, Deaths and Marriages, the Director of Agriculture, the Registrar of Co-operative Societies, the Director of Industries, the Legal Commissioner, the Director of Veterinary Services and the two Chief Magistrates, Public Works Department, Buildings and Roads and Irrigation Branches.

The Deputy Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer over whom the Deputy Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon, who is generally also Superintendent of the District Jail and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also Marriage Registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service, (b) one or more Extra Assistant Commissioners, or members of the Provincial Civil Service, usually natives of India, but including a few Europeans and Anglo-Indians and (c) by Tahsildars and Naib Tahsildars, or members of the Subordinate service who are nearly always natives of India. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar or representative of the proprietary body, is executive headman.

Justice

The Court of the Judicial Commissioner is the highest court of appeal in civil cases, and also the highest court of criminal appeal and revision for the Central Provinces and Berar including proceedings against European British subjects and persons jointly charged with European British subjects.

The Court sits at Nagpur and consists of a Judicial Commissioner and 4 Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (12 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Sub-Judges of the 1st and 2nd class.

Local Self-Government

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several reviving Acts extend its scope and the O P Municipalities Act passed towards the end of the year 1922 has considerably increased the power of the Municipal Committees. The O P Municipalities Act has also been extended to Berar. Viewed generally, municipal self-government is considered to have taken root successfully. The larger towns have municipalities, there being 68 such bodies in the Province.

Under the Central Provinces Local Self Government Act passed in 1920 there is a Local Board for each tahsil and a District Council for each district. The Local Board consists of elected representatives of choies and nominated members other than Government

officials not exceeding in number one-fourth of the Board, and the constitution of the District Council is a certain proportion of elected representatives of Local Boards, of members selected by those representatives and of members, other than Government servants, nominated by Government.

The District Councils in the Central Provinces have power of taxation within certain limits and Local Boards derive their funds in allotments from the District Councils. The new Central Provinces Local Self Government Act has also been applied to Berar. The Office Bearers of all the District Councils and with few exceptions Local Boards also are non officials.

Rural education, sanitation, medical relief and rural communications are among the primary objects to which these bodies direct their attention while expenditure on famine relief is also a legitimate charge upon the District Council funds.

The Central Provinces Village Panchayat Act was passed in the year 1920. So far 482 Panchayats have been established. As the result of a recommendation of a Committee appointed in 1926 to look into the question of Panchayats, a Village Panchayat Officer has been appointed to guide the developments of the Panchayat system and the results so far achieved have been satisfactory.

Public Works

The Public Works Department (Buildings and Roads and Irrigation Branch) is controlled by two Chief Engineers who are Secretaries to the Government. There are three Superintending Engineers for Buildings and Roads and two for Irrigation. The Province is well served by a network of roads, some of which have been constructed as famine relief works. In a number of cases these roads are not fully bridged and are, therefore, impassable to traffic at times during the rains. During the last 13 years Government has been pursuing a policy of transfer of certain State roads of local importance and buildings situated thereon to the District Councils for maintenance and up to date 1,190 miles of metalled and 820 miles of unmetalled roads have been transferred.

State Irrigation was introduced early in the present century mainly as a result of the recommendations of the Irrigation Commission (1901-05). The Irrigation Branch of the department was separated from the Roads and Buildings Branch in 1920. During the last thirty one years a sum of about Rs 7 crores has been expended on the construction of irrigation works, of which the more important are the Winganga, Tandula, Mahanadi, Kharung and Manjari projects.

Three works, viz., the Mahanadi and Wainanga Canals and the Asola Mendha tank, were originally sanctioned as productive works and the remainder were all sanctioned as unproductive works. The three works sanctioned as productive have all failed to justify their classification in this category and have now been transferred to the unproductive list. The conditions in the province are such that irrigation works cannot be expected to be productive and their construction is justified only on account of their value as a protection

against famine. The normal area of annual irrigation is at present about 400,000 acres, and the income from these works is somewhat less than the expenditure incurred on their maintenance and management.

Police

The police force was constituted on its present basis on the formation of the Province, the whole of which including the Cantonnments and the Municipalities, is under one force. The strength is equal to one man per nine square miles of area. The superior officers comprise an Inspector General, whose jurisdiction extends over Berar three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Balpur and Hoshangabad. A Special Armed Force of 870 men is distributed over the headquarters of eight districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education

The Education Department of the Central Provinces and Berar is administered by a Director of Public Instruction, a Deputy Director, five Inspectors and two Inspectresses who in their turn are assisted by eight Assistant Inspectors and four Assistant Inspectresses. An Agency Inspector supervises the schools in the central provinces States. Schools are divided into schools for general education and schools for special education. The latter are schools in which instruction is given in a special branch of technical or professional education. The main divisions of schools for general education is into Primary and Secondary. In the Primary Schools the teaching is conducted wholly in the vernacular and these schools are known as Vernacular Schools. The Secondary Schools are divided into Middle and High Schools. The former may be either Vernacular Middle Schools in which instruction is given wholly in the vernacular, or Anglo-Vernacular Middle Schools in which instruction is given both in English and the vernacular. In the High School classes instruction until recently was given in English but the vernacular was adopted as the medium of instruction at the beginning of the school year 1922-23. For the convenience of pupils whose mother tongue is not a recognized vernacular of the locality a few English medium classes are still maintained. For administrative purposes schools are further divided according to their management into schools under public management and schools controlled by private bodies. The former consist of (a) schools controlled by Government and (b) schools controlled by Local Bodies or Boards. The latter consist

of (a) Schools which are aided by grant from Government or from Local Funds and Municipal Funds and (b) unaided schools. All schools under public management, all aided schools and all unaided recognized schools conform in their courses of study to the standards prescribed by the Education Department or by the High School Education Board. They are subject to inspection by the Department and to the general rules governing schools of this type. They are recognised by the Department and their pupils may appear as candidates for any prescribed examination for which they are otherwise eligible. Unaided recognized schools do not follow the rules of the Department, nor are they subject to inspection by the Department. They are mostly indigenous schools which have been too recently opened to have acquired recognition. Their pupils may not appear as candidates at any of the prescribed examinations without the previous sanction of the Department.

The inspection and administration of Board Vernacular schools transferred as an experimental measure, to the District Councils at Bhausa, Balaghat, Amroht and Hoshangabad, were retransferred to Government with effect from the 1st September 1923.

The Primary Education Bill which was passed by the Local Legislative Council in March 1920 marks an important stage by giving Local Bodies power to introduce compulsory education in the areas under their jurisdictions.

Higher education is at present given in five colleges. In Nagpur Morris College teaches up to the M.A. standard in Arts. Hilsop College is affiliated up to the M.A. standard in Arts. The College of Science teaches up to the M.Sc. standard in Science. In Jubbulpore Robertson College teaches up to the B.A. and B.Sc. standards. The King Edward College teaches up to the B.A. degree in Arts and the Intermediate degree in Science. The province contains also a Teachers Training College at Jubbulpore and Normal Schools at different centres, and an Engineering School at Nagpur. There is a Technical Institute at Amroht which is controlled by the Department of Industries. There is also an Agricultural College at Nagpur under the Department of Agriculture.

Collegiate Education is under the control of the University of Nagpur to which the colleges of the province are affiliated. The University was established by the Nagpur University Act of 1923. A University Law College has been established at Nagpur with effect from the 1st July 1923.

As a corollary to the Central Provinces University Act the Central Provinces High School Education Bill was passed in 1923 on the lines of the United Provinces Intermediate and High School Education Act. Its aim is to free the High Schools of the Province from the control of the University and from this point of view to substitute for the University a Board of Secondary Education for the regulation and control of Secondary Education. In order,

however that the connection between Secondary and University Education may still be maintained the Bill provides that one-third of the members of the Board will be drawn from men experienced in university affairs and that of this, one-third not less than two-thirds shall be teachers in the University or in colleges affiliated thereto. At the same time teachers engaged in school work are also represented on the Board.

Medical

The medical and sanitary services of the province are respectively controlled by an Inspector General of Civil Hospitals and a Director of Public Health. The medical department has made much progress since the year 1911. A striking advance has been made in recent years with urban sanitation and the opening of a Medical School at Nagpur. The principal medical institutions are the Mayo Hospital at Nagpur, opened in 1874, with accommodation for 217 inpatients, the Victoria Hospital at Jubbulpore, opened in 1886, and accommodation for 106 inpatients, the Lady Dufferin Hospital and the Mure Memorial Hospital at Nagpur and the Lady Elgin Hospital and the Crump Children's Hospital at Jubbulpore these last four being for women and children and containing together accommodation for 190 inpatients. Two important hospitals for women have been recently opened at Chhindwara and Khawda and at all district headquarters where no separate women's hospitals exist, sections of the Main Hospitals have been opened for the treatment of women by women. The Mayo Hospital, Nagpur was provincialised in 1923, the Main Hospital at Amroht in 1925 the Victoria Hospital at Jubbulpore in 1928, and the Main Hospital at Raipur in 1928. In accordance with recent policy, 117 out of 177 local fund dispensaries have been transferred to the administrative and executive control of local bodies. The Province has one Mental Hospital at Nagpur. Vaccination is compulsory in nearly all Municipal towns to which the Vaccination Act has been extended. The Government in 1913, sanctioned the opening of peripatetic dispensaries in unhealthy areas. There are at present 43 such dispensaries. A school for training health workers has been started at Nagpur and 48 Infant Welfare Centres have been opened. A start in the direction of opening a Health Institute has been made with the initiation of chemical and bacteriological works with a small staff in Nagpur.

Finances

The budget presented this year was a progressive one. Its success was in no small measure due to the cautious and skilful handling of the provincial finances in the post-reform period by successive finance members. The willingness of the Council to submit to new taxation during the depressing days of 1923 was another factor that tended to maintain the equilibrium of the finances. The shadow of famine brooded over the northern districts in the provinces in the current year, but Government lost no time in extending relief on a lavish scale, with the result that the outlook is more hopeful.

FINANCES OF THE CENTRAL PROVINCES

ESTIMATED REVENUE FOR 1930-31.

<i>Principal Heads of Revenue</i>		Rs
Taxes on Income		1,80,000
Land Revenue		2,41,10,000

North-West Frontier Province.

The North West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 276 miles and its total area about 39,000 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara, the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Kohat, Bannu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 18,419 square miles. The mountain regions north and west are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor-General. The area of this tract is roughly 25,500 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, North Waziristan and South Waziristan Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 130 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. The key to the history of the people of the N.-W. F. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns and later the two great waves of Muhammadan invasion. Last came the Sikh invasion beginning in

1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris in 1919-1920. These have resulted in the establishment at Rawalakot, a position dominating the Mahsud Waziri country, of a permanent garrison of 10,000 troops drawn mostly from stations lying in the Plains immediately below the hills. A circular road from Bannu through Rawalakot to Sarangdha, Jandola and back to the Derajat provides communications transport with this force and facilitates its mobility. The effect of this measure has been a marked improvement in the internal peace of the Tribal area.

The division of the Frontier Province from the Punjab has frequently been discussed, with the double object, in the earlier stages of these debates of securing closer and more immediate control and supervision of the Frontiers by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign and Political Department. In political questions there is no intermediary between the Chief Commissioner and the local officer, an arrangement designed to secure both prompt disposal of references and the utilization of the expert knowledge of frontier conditions for which the head of the administration is selected. The advisability of re-uniting the Province with the Punjab was much discussed in certain Indian political circles and as a result of the views expressed upon the matter in the Legislative Assembly the Government of India in 1922 appointed a Committee of officials and unofficals to investigate it. The Committee, presided over by Mr. D. de R. Bray, M.L.A., Joint Foreign Secretary, toured the Frontier Province and the Punjab and heard numerous witnesses. Its members were Messrs. Bhai Ali, M.O.S., T. Rangachari, Chaudhri Shaha Buddin, N. M. Samarth and K. B. Abdur Rahim Khan, members of the Legislative Assembly, H. N. Bolton, I.O.S. (Foreign Dept.) and A. H. Parker, I.O.S. (Punjab) (members). The inquiry developed practically into a contest between Mahomedans and Hindus on communal lines. The Hindus, allied in sympathy with their co-religionists in the Punjab, demanded the reunion of the administered districts of the Province with the Punjab or, if that were not attainable, then the placing of the judicial

administration of the Province under the Punjab High Court at Lahore. The Mahomedans on the other hand claimed the right of their Province to a status corresponding with that enjoyed by other Provinces of India and to immediate reforms initiating and providing for progress along that line. The Hindus agreed that a separate Pathan Province on the Frontier would cause a dangerous sentimental division from the rest of India, with leanings towards the allied racial elements outside British India. The answer to that was that a contented Pathan Province would be a valuable buttress against hostile feelings across the Border. The Committee's deliberations ended in disagreement, the two Hindu members writing each a separate report favouring the Hindu viewpoint already explained, and the majority of the Committee, comprised of all its other members, recommending advance on a Provincial basis. Their principal recommendations were for—

Retention of the Settled Districts and Tribal Tracts as a separate unit in charge of a minor administration under the Government of India,

Early creation of a Legislative Council for the Settled Districts and appointment of Member of Council and Minister,

Appointment of a second Judicial Commission which has since been sanctioned and reform of the judicial administration in various directions, including interchange of officers with the Punjab so that the members of the Service in the smaller Province should have the advantage of experience in the larger one.

If (concluded the Majority) the Pathan nationality is allowed self-determination and given scope for that self-development within the Indian Empire under the Reforms Scheme after which it is now striving we are assured that with a contented Frontier population India can face with calm resolution the future that the Frontier has in store for her."

The People.

The total population of the N-W-F-P (1921) is 5,075,476, made up as follows—

Hasara	622,349
Trans-Indus Districts	1,628,061
Trans-Border Area	2,825,136

This last figure is estimated. There are only 561 3 females per 1,000 males in the towns and 872 2 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N-W-F-P any more than in other parts of Northern India—here it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them.

Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 80.8 and the death rate 23.7.

The dominant language of the Province is Pashtu and the population contains several linguistic strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own a very large proportion of the land in the administered districts and are the ruling race of the tribal areas to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent of the total and Sikhs to a few thousands. The occupational cleavage of the population contrasts ethnical divisions.

Under the North-West Frontier Province Law and Justice Regulation of 1901, custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna.

The climatic conditions of the N.W.F.P. which is mainly the mountainous region but includes the Peshawar Valley and the riverine tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal, the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely. The following description of the Damian, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west, occurs in an account written some years ago by Captain Croft Waite. Men drink once a day and the cattle every second day. Washing is an impossible luxury.

It is possible to sit in the hot weather to ride thirty miles and neither hear a dog bark nor see the smoke of a single fire. With the exception of the Kunhar River, in Hasara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south-eastern plains to barren hills, pine forests and fertile mountain valleys. Tigers used to abound in the forests but are

now quite extinct, leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bears, deer and monkeys are found, a great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal.—

Takht-i-Sulaiman, Sulaiman Range, in Dera Ismail Khan, 11,592 feet

Pre Ghal, Sulaiman Range, in Mahsud Waziristan, 11,583 feet

Sika Ram, in the Safed Koh, in the Kurram Agency, 15,621 feet

Kagan Peaks of the Himalayas, in the Hazara District, 10,000 to 16,700 feet.

Istragh Peak (18,900 ft.), Kachin Peak (23,641 ft.) Tirich Mir (25,426 ft.), all in the Hindu Kush on the northern border of Chitral Agency

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the Province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. Special mention may be made of the railway comparatively recently opened linking Baluchistan, in the south-west of the N. W. F. P., via Nushki with south-east Persia. The line connects with the north-west railway system of India and extends 343 miles to Durdag, within the Persian border. Two weekly trains run each way and the freight carried largely consists of carpets, wool and dates, from Persia and of tea, sugar and piece-goods from the Indian side. Though the railway is primarily strategic in purpose its commercial and political effects will be considerable. The travelling traders (or *Powin dahi*) from the trans-frontier area have always pursued their wanderings into India and now, instead of doing their trading in towns near the border, carry it by train to the large cities in India. The Railway line from Pir to Lankitabana which is complete and open to public traffic now will similarly in course of time, develop both the manner and amount of transport communications and trade. The new roads in Waziristan are already largely utilised by the Tribal inhabitants for motor traffic. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 26 per cent. and uncultivated to 75 per cent.

The work of civilisation is now making steady progress, both by the improvement of communications and otherwise. Relations with the tribes have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered, though in this respect there is complaint against the limitations imposed by financial embarrasments. In the British administered districts 19 per cent. males and 7 per cent. females of the total population are returned as literate. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13.3 per cent are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Foharpur Canal, also completed a few years ago, will bring ease and prosperity to a number of peasant homes.

Administration

The administration of the North West Frontier Province is conducted by the Chief Commissioner and Agent to the Governor-General in Council. His staff consists of—

- (1) Officers of the Political Department of the Government of India.
- (2) Members of the Provincial Civil Service.
- (3) Members of the Subordinate Civil Service.
- (4) Superintendents and Assistant Superintendents of Police.
- (5) Officers recruited for the service of departments requiring special knowledge—Military, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the first head above are —

Administration	Chief Commissioner & Agent to the Governor-General	5
	Secretary	
	Under-Secretary	
	Personal Assistant	
	Revenue Commissioner and Revenue Secretary	
	Resident in Waziristan	1
	Deputy Commissioners	
	Political Agents	5
	District Judges	2
	Assistant Commissioners and Assistant Political Agents	13
Judicial Commissioner's Court & Divisional Judges.	Two Judicial Commissioners.	1
	Two Divisional and Sessions Judges.	
	One Additional District Judge.	

The districts under the Deputy Commissioners are divided into from two to five sub-collectorates, in charge of tahsildars, who are invested with criminal and civil and revenue powers, and are assisted by sub-tahsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. There are four divisions of the Roads and Buildings Branch of the Public Works Department, each under an Executive Engineer. The Irrigation Department of the P. W. D. is in charge of a Chief Engineer, Irrigation who is also *ex-officio* Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions divisions, each presided over by a Divisional and Sessions Judge. The two Judicial Commissioners are the controlling authority in the Judicial branch of the administration, and their Courts are the highest criminal and appellate tribunals in this Province. The improvements needed to bring the judicial administration up-to-date, in accord with the growth of the business of administration, are dealt with in the Inquiry Committee's report to which reference was made above. The principal officers in the present Administration are —

Agent to the Governor General and Chief Commissioner. The Hon'ble Sir Stewart Edmund Peary, C.B., C.I.E., I.C.S. (Assumed charge 10th May 1930).

Personal Assistant, Captain W. C. Leeper
Resident Warisatan, Lieut. Col. R. E. H. Griffith, C.I.E.

Judicial Commissioner, J. H. R. Fraser, C.I.E., O.B.E., I.C.S.

Additional Judicial Commissioner, Khan Bahadur Sanduddin Khan, B.A., LL.B.

Revenue Commissioner Lieut. Col. J. A. Brett, C.I.E.

Secretary to Chief Commissioner G. H. Gidney, I.C.S.

Under Secretary to Chief Commissioner, L. G. Wallis, I.C.S.

Assistant Financial Secretary to Chief Commissioner, Rai Sahib Lala Ghun Lal

Indian Personal Assistant to Chief Commissioner, Khan Sahib Haji Gulam Asgharband Khan

Secretary Public Works Department Buildings and Roads Branch, Colonel O. H. Haswell, C.I.E., R.E.

Secretary, Public Works Department, Irrigation Branch, F. H. Burkill, O.B.E.

Chief Medical Officer, Lieut. Col. C. I. Brerley, C.I.E., M.B.

Inspector General of Police J. H. Adam, O.B.E.

Commandant Frontier Constabulary V. A. Short

Director of Public Instruction J. H. Towle, I.C.S., M.A.

Superintendent, Archaeological Survey Frontier Circle J. F. Blackiston

Divisional and Sessions Judge J. Almond

Bar-at-Law I. C. S. (Peshawar)

Capt. B. F. Ross Hurst, M.C., Kurram

Brevet-Major H. H. Johnson, M.V. South Waziristan

Deputy Commissioners

A. J. Hopkinson, I.C.S. Hazara.

G. K. Caroe, I.C.S. Peshawar

L. W. Jardine, I.C.S. Dera Ismail Khan

L. W. H. Best, O.B.E., M.C., I.C.S. Kohat

Captain W. F. Campbell, Bannu

Former Chief Commissioners

Lieutenant-Colonel Sir Harold Deane, K.C.S.I., from 9th November 1901 to 3rd June 1902

Died 7th July 1908

Lieutenant-Colonel Sir George Ross-Keppel, G.C.I.E., R.O. I. from 4th June 1908 to 9th September 1919

The Hon'ble Sir Alfred Hamilton Grant, K.C.S.I., C.I.E. from 10th September 1919 to 7th March 1921

The Hon'ble Sir John Loader Maffey, K.C.V.O., G.S.I., I.C.S., from 8th March 1921 to 6th July 1923

The Hon'ble Sir Horatio Norman Bolton, K.C.I.E., G.S.I., I.C.S., from 7th July 1923 to 30th April 1930

Assam.

The Province of Assam, omitting the partly administered and unadministered tracts on its northern and eastern borders, comprises an area of some 63,510 square miles. It includes the Assam Valley Division, the Surma Valley and Hill Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population

The total population of the Province in 1921 was 7,990,246, of whom 884,916 were in Manipur. Of the population in 1921, 2½ millions were Mahomedans, 4½ millions Hindus and 1½ millions Animists. 44 per cent of the population speak Bengali, 22 per cent speak Assamese other languages spoken in the province are Hindi, Urdu and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 150, which compared with that of most other parts of India is low, but is more than double that of Burma.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India. Climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 5 million acres being devoted to this crop. Except in the Himalayan Terai irrigation is unnecessary. Tea and jute are the most important crops grown for export. The area under tea consists of 429,605 acres. Wheat and tobacco are also grown and about 46 square miles are devoted to sugarcane.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 67 to 229 inches. The maximum is reached at Cherrapunji in the Khasi Hills which is one of the wettest places in the world, having a rainfall of 488 inches. The temperature ranges from 59 at Sibsagar in January to 84.8 in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills and the Lakhimpur districts, where about 300,000 tons are raised annually. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Garo Hills. Petroleum is worked only in Lakhimpur and Cachar.

An account of the petroleum occurrences in Assam was recently published in the *memoirs*

of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Cachar and Chittagong to the Arakan coast, where it has a S.E. trend.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom, the cloth being gradually displaced by imported goods of finer texture and colour. Tea manufacture is the most important industry of the province. Boat building, brass and metal and earthenware, and limestone burning are the other industries apart from agriculture, which itself employs about 80 per cent of the population. Assam carries on a considerable trade with the adjoining foreign tribes and countries.

Communications.

Much of the trade of Assam is carried by river. The excellence of its water communications makes the province less dependent upon roads than other parts of India. A large fleet of steamers maintained by the India General Navigation Company and the River Steam Navigation Company ply on the rivers in both valleys. An alternate day service of passenger boats runs between Goalundo and Dibrugarh. In recent years the road system has developed. There is an unmetalled trunk road through the length of the Assam Valley and excellent metalled roads from Shillong to Gauhati and to Cherrapunji and also between Dimaapur, on the Assam Bengal Railway, and Imphal, the Capital of the Manipur State. A motor road connecting Shillong with the Surma Valley is under construction. The Government of Assam have recently launched into a large programme of road improvements. About 735 miles are to be bridged throughout and the surface improved by metalling and gravelling where possible. *Kutcha* roads will be maintained by means of mechanical plant which has proved successful in maintaining throughout the year a surface fit for motor vehicles. Motor traffic has increased on all sides and the demands for better roads has been insistent. The open mileage of railway has also shown a steady improvement and several branch lines to the Assam Bengal Railway system have been added in recent years. The main Assam Bengal Railway line runs from Chittagong Port in Bengal, through the North Cachar Hills to Tinsukia, a station on the Dibru Sadia Railway and connects the Surma and Brahmaputra valleys. A branch of the line runs from Badarpur to Sibsagar at the Eastern end of the Surma Valley and another runs through the west of the Assam Valley from Lumding to Gauhati where it effects a junction with the Eastern Bengal Railway. The Eastern Bengal Railway connects Assam with the Bengal system via the Valley of the Brahmaputra.

THE FINANCES OF ASSAM

In common with the other Provinces of India Assam secured substantial financial autonomy under the Reform Act of 1919. The present financial position is set out in the following table.—

Estimated Provincial Revenue for 1930-31 (In Thousands of Rupees.)

Taxes on Income	..	5,00

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1905, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912 the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Province of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provinces to suit its undeveloped character with the older major provinces of India.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquakes.

GOVERNOR

H. E. Sir Egbert Laurie Lucas Hammond, K.C.I.E., C.B.E., I.C.S.

EXECUTIVE COUNCIL

The Hon'ble Maulavi Salyid Sir Muhammad Saadulla, Kt., M.A., F.R.S.

The Hon'ble Mr. A. J. Laine, C.I.E., I.C.S.

MINISTERS

The Hon'ble Maulavi Abdul Hamid, M.A.

The Hon'ble Rai Bahadur Kanak Lal Barua, B.L.

PERSONAL STAFF OF HIS EXCELLENCY THE GOVERNOR

Private Secretary, Major D. O. Mansel Shewen, 15/9 Punjab Regiment

Aide-de-Camp, Lieut. N. G. Thompson, R.A., 3rd Field Battery, Meerut.

Honorary Aide-de-Camp, Sardar Bahadur Subadar Pokul Thapa.

Honorary Aide-de-Camp, Subadar-Major Nain-sing Mall.

Honorary Aide-de-Camp, Lieutenant-Colonel A. B. Biddow, V.D., M.V., Light Horse, Auxiliary Force.

SECRETARIES, ETC. TO GOVERNMENT

Chief Secretary, W. A. Osgraves, I.C.S.

Secretary to Government (Finance and Revenue), C. K. Rhoads, I.C.S. (offg.)

Secretary to Government (Transferred Departments), H. G. Donnelly, I.C.S. (offg.)

Under Secretary to Government, S. Gohain, M.A., B.L. (offg.)

Baluchistan.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,340 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78,434 square miles. The Province embraces an area of 1,14,648 square miles and according to the census of 1921 it contains 99,620 inhabitants.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Sialkot hills with the hill system of Southern Persia. It thus forms a watershed, the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains rise by high chains and gorges, alternate with acid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839. It was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Clans into a close confederation. In the Afghan War of 1879 Feroz Khan, Sherard, Qabul, Sawara Valley and Thal Chotah were handed over by Yakub Khan to the British Government and returned at Sir Robert Sandeman's strenuous insistence.

Industries

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrug, which has the heaviest rainfall records, no more than 11½ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The majority of the Afghan and the Baluch as a rule, cultivate their own lands. The Brahui dislike agriculture and prefer a pastoral life. Previous to the advent of the

British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Makran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 100 public schools of all kinds with 6,391 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons such as Bibi and Zinat, but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Shahrug and Harrai on the Sind-Pishin Railway and in the Bolan Pass. The output of coal in 1929-30 was 16,959 tons. Chromite is extracted in the Zhob District near Hindubagh. The chrome output fell off owing to poorer demand. Lime-stone is quarried in small quantities. The output of chromite during 1929-30 amounted to 17,906 tons.

Administration

The head of the local administration is the officer styled Agent to the Governor General and Chief Commissioner. Next in rank comes the Revenue Commissioner who controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self government by the tribesmen as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies play an unobtrusive but invaluable part in the work of the Civil administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of process and other miscellaneous work. In addition to these district levies there are ordinarily three irregular Corps in the Province, the Zhob Militia, the Makran Levy Corps and the Chagai Levy Corps. The Province does not pay for itself and receives large subsidies from the Imperial Government.

Agent to the Governor-General and Chief Commissioner in Baluchistan. The Hon'ble Lt.-Col. C. E. Bruce, C.S.I., C.I.E.

Revenue and Judicial Commissioner, A. N. L. Carter, C.I.E., I.C.S.

Secretary Public Works Department, Brigadier W. H. Evans, C.I.E., D.S.O., R.E.

Secretary to the Agent to the Governor-General and Chief Commissioner, Captain E. E. Burnett, I.A.

Political Agent, Zhoob, Major G. L. Batham, M.C.

Political Agent, Kaint and Ba'an Pass, Lt.-Col. G. T. O. Plowden, I.A.

Political Agent and Deputy Commissioner, Quetta, Major L. T. R. Wickham, M.V.D.

Political Agent, Sub, O. P. Shroff, I.C.S.

Political Agent, Loralai, Khan Bahadur Sharbat Khan, C.I.F.

Assistant Political Agent and Assistant Commissioner, Quetta-Peshawar, Capt. L. A. G. Pinhey

Political Agent, Chagun, Lt. Col. S. Williams

Assistant Political Agent, Sub, Major H. M. Poulton

Residency Surgeon and Chief Medical Officer, Lt. Col. R. F. D. Macgregor, I.M.S.

Civil Surgeon, Sub, Major J. Williamson, I.M.S.

Civil Surgeon, Quetta, Major R. L. Vance, I.M.S.

ANDAMAN AND NICOBAR ISLANDS

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair by sea 780 miles from Calcutta 740 miles from Madras and 380 miles from Rangoon with which ports there is regular communication.

The land area of the islands under the administration is 3,163 square miles, namely, 2,506 square miles in the Andamans and 656 square miles in the Nicobars. The total population is 26,459. The islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1868, is the most important in India.

Chief Commissioner of Port Blair, Lieut.-Col. M. L. Ferrar, C.B.E., C.I.E., C.B.E., I.A.

Commandant, Military Police, Lt.-Col. G. O. Wheeler, V.C., I.A.

Senior Medical Officer and Civil Surgeon, Major A. J. D. Scum, I.M.S.

COORG.

Coorg is a small petty Province in Southern India, west of the State of Mysore. Its area is 1,588 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan Tippu of Seringapatam. In May 1884 owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. A Legislative Council consisting of 15 elected members and five nominated members was created in 1923. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to over production and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Chief Commissioner, Coorg, The Hon. Lt.-Col. R. J. C. Burke

AJMER MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Agent to the Governor-General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara, with a total area of 3,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty, dated June 25, 1818, ceded the district to the British. Fifty-five per cent of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil seeds and wheat.

Chief Commissioner, The Hon. Mr. L. W. Reynolds, C.B.E., C.I.E.

Aden.

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition in 1839 was the outcome of an outrage committed by the local Abdali chief upon the passengers and crew of a British brig wrecked in the neighbourhood. Various acts of treachery supervened during the negotiations regarding the brig-wreck outrage and Aden was captured by a force sent by the Bombay Government under Major Bellie. The act has been described as one of those opportune political strokes which have given geographical continuity to British possessions scattered over the world.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow

isthmus of flat ground. This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though some times only just above water. The highest peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1,775 feet above sea level. Ragged spurs, with valleys between, radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1808 and the adjoining tract of Shalikh Othman, 30 square miles in extent, was subsequently purchased when, in 1862, it was found necessary to make provision for an overflowing population.

Attached to the settlement of Aden are the islands of Perim, an island of 5 square miles extent in the Straits of Bab-el-Mandeb, in the entrance to the Arabian Sea. Sokatra Island, at the entrance to the Gulf of Aden, in the Arabian Sea, came under the British sphere of influence by a Protectorate treaty in 1886 and 1,388 miles in extent, and the five small Kuria Kuria islands, ceded by the Imam of Maskat in 1864 for the purpose of landing the Red Sea cable, and otherwise valuable only for the guano deposits found upon them. They are off the Arabian coast about two-thirds of the way from Aden to Maskat. The whole extent of the Aden settlement, including Aden, Little Aden, Shaikh Othman and Perim, is approximately 80 miles. The 1921 census showed Aden, with Little Aden, Shaikh Othman, and Perim to have a population of 56,671. The population of Perim is 2,078 largely dependent on the Coal Depot maintained there by a commercial firm. That of Sokatra is 12,000, mostly pastoral and migratory inland, fishing on the coast.

Strategic Importance.

Aden's first importance is as a naval and military station of strategic importance. This aspect was ably discussed by Colonel A. M. Murray, in his "Imperial Outposts." He points out that Aden is not a naval base in the same sense that Gibraltar, Malta and Hong Kong were made, but a point d'appui, a rendezvous and striking point for the fleet. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategic point of view this is its primary purpose and the reason of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength, invulnerable by sea and by land, dominating the entrance to the Red Sea, and valuable to its owners as a commercial emporium, a port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The harbour is dredged to 30 below L.S. L.W. and is approached by a dredged cut of the same depth. This cut extends seaward to join the 5 fathom contour and thus gives a depth at low water spring tides of 5 fathoms for vessels entering the Port. The junction of this cut with the 5 fathom contour is marked by the fairway buoy which carries a flashing red light. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and by a Protectorate treaty with the Sultan of Sokatra, which may both be regarded as outposts of Aden, and are under the political jurisdiction of the Resident.

The Arab chiefs of the hinterland of Arabia are nearly all vassals of the British Government. Colonel Wabab and Mr. G. H. Flatau, of the Constantinople Embassy, were appointed, in 1907, as Commissioners to delineate the frontier between Turkish Arabia and the British protectorate around Aden. A convention was signed in 1906 setting details, the frontier line being drawn from Shaikh Murad, a point of the Red Sea coast opposite Perim, to the bank of the river Bane, the eastern limit of Turkish claims, at a point some 20 miles north east of Dhale, and thence north-east to the

great desert. The area left within the British Protectorate was about 5,000 square miles. The arrangement gave to Turkey Cape Bab-el-Mandeb, which forms the Arabian bank of the eastern channel past Perim into the Red Sea. A sanatorium and small British garrison used to be maintained at Dhale, which is 7,700 feet high, but the garrison was withdrawn in 1906, Lord Morley explaining this step as being in accordance with the policy stated in the House of Lords in 1903—that His Majesty's Government had never desired to interfere with the internal and domestic affairs of the tribes on the British side of the boundary, but had throughout made it plain that they would not assent to the interference of any other Power with those affairs. Affairs in this respect have been disarranged considerably by the war.

British Policy

There has been much criticism of a policy under which Aden has failed to advance with the same progressive strides which have marked the development of other British dependencies. It is said that the former Persian possessors of Aden built its wonderful water tanks, and the Arabs made an aqueduct 20 miles long, while the British have done nothing except mount guns to protect their coal yards. Trade, it is argued, flourishes because this is a natural emporium of commerce, but not because of the attention its needs get from Government. Lord Roberts, writing on this point a few years ago, said: "It is not creditable to British rule to make use of a dependency like Aden for selfish purposes of political necessity without attempting to extend the benefits of civilised Government to the neighbouring native tribes, especially when those tribes are living under the aegis of the British Crown. The Persians, the Turks and even the Arabs did more for Aden in their time than we have done during our seventy years' occupation. Aden has always suffered under the disadvantage of being an appanage of the Bombay Presidency, with which it has neither geographical, racial nor political affinity. Probably the best solution of the matter would be to hand over the place to the Colonial Office, relieving the Government of Bombay of a charge which is only looked upon as an incubus." This question has now been finally decided. As explained below, His Majesty's Government are now responsible for the military and political administration of Aden, the Government of India remaining responsible for the internal administration of the settlement. Management has no doubt resulted in a dual control. But the change has been found necessary because Aden has assumed a far wider importance in Imperial Communications from that of a port of call in the voyage to India and because it is hoped that the cost of its defence might be reduced if it was treated as a part of the Middle East.

Language.

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly composed of Arabs and Shaikhs. The Somalis from the African coast and Arabs do the hard labour of the port. So far as the settlement is concerned the chief industries are salt and cigarette manufacture. The crops of the tribal low country adjoining are jowar, sesamum, a little cotton, sugar

a bastard adron and a little indigo. In the hills, wheat, madder fruit, coffee and a considerable quantity of wax and honey are obtained. The water supply forms the most important problem. This appears to have been now nearly solved. An artesian supply of fresh water has been obtained at Shalkh Othman. Early in 1924 a start was made with a deep bore and sweet water was found at a depth of 1545 ft. The artesian flow of water now rises from this bore at 750 gallons per hour. A second bore was started in 1928-29 and proved more productive than the first sinking of more bores is proceeding.

The discovery of artesian supplies of fresh water at Aden by the Bombay Government has removed one of the greatest hardships to the growth of that very important sea port, frequently referred to as the Gibraltar of the East and should cause much satisfaction to the residents since the cost of sweet water hitherto only obtainable in normal years by distillation has been about fifty times higher than the water rates, usually payable to Municipalities in India. The urgent need of a fresh water supply at Aden can be realised the better when it is stated that it has a population of some 40 000 souls and that over 1,500 vessels enter the port annually, carrying on trade amounting to from 15 to 20 millions sterling per year. It is the only port at which ships call for water between the Suez Canal and India or Ceylon and upto the present time this supply has been met by the costly process of condensing sea water.

Administration

The administration of Aden was in former times directly under the Government of Bombay. In 1920, the political control of Aden, which was exercised during the period of the war by the High Commissioner of Egypt, was transferred to the Political Resident in Aden, who was to be directly responsible to the Foreign Office. In 1921, this responsibility was taken over by the Colonial Office. The future of the Protectorate has been the subject of no little discussion and various proposals have been put forward. At one time the idea that it should be transferred to the Colonial Office was seriously entertained. The proposals met with warm disapproval from the important Indian community in Aden whose views were supported in India. There has been much friction between India and the Colonial Office over the status of Indians in the Dominions and some of the Crown Colonies, and the lukewarmness of the Colonial Office in protecting their rights was much resented. Therefore transfer to the Colonial Office was opposed as transfer to an unkindly and unsympathetic administration. On the 11th July 1922 the Under-Secretary of State for the Colonies stated in the House of Commons that there was no prospect of the Colonial Office taking over the control of Aden in the near future. Deliberations between the Government of India and the Imperial Government reached their conclusion during 1927 and the decisions finally taken were announced by the Government of India in the Legislative Assembly assembled in Delhi during the Budget debates in March, 1927. The new arrangements came into operation on April 1st, 1927. Under the new conditions, the Imperial Government are responsible for the military and political situation in Aden and its

Hinterland. The settlement of Aden itself, which is to a large degree peopled by Indians, remains under the Government of India. The financial settlement required by this division of authority provides for the payments by India to Imperial Revenues of £250 000 a year for three years and thenceforward of £150 000 a year. The larger amount is considerably less than the annual expenditure falling upon Indian revenues under the former system of control.

The administration is conducted by a Resident and Commander in Chief who is assisted by four Assistants. Since the introduction of the dual control referred to above the Resident's post is to be held alternately by an Officer of the Indian Service and by a member of the Colonial Service. The Court of the Resident is the Colonial Court of Admiralty under Act XVI of 1891, and its procedure as such is regulated by the provisions of the Colonial Courts of the Admiralty Act 1890 (53 and 54 Vic Chapter 27). The laws in force in the settlement are generally speaking those in force in the Bombay Presidency, supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1884. The principal business of the Port Trust has been the deepening of the harbour so as to allow vessels of all sizes to enter and leave at all states of the tide. The Aden police consists of land, harbour and armed police under a scheme of re-organisation recently introduced. There are hospitals and dispensaries in both Aden and Perim, in addition to the military institution of this character. The garrison comprises a troop of engineers, three companies of garrison artillery, one battalion of British infantry, two companies of sappers and miners and one Indian regiment. Detachments from the last named are maintained at Perim and Shaikh Othman respectively.

Climate

The average temperature of the station is 87 degrees in the shade the mean range being from 75 in January to 98 in June, with variations up to 102. The humidity between the monsoons, in May and September are very oppressive. Consequently long residence impairs the faculties and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next. But Aden is usually free from infectious diseases and epidemics and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from 2 inch to 24 inches with an irregular average of 3 inches.

Resident and Commander in Chief Lieut-Col Sir Stewart Symes, K.C.S.I., C.M.G., D.S.O.

1. Lt-Col B. R. Kelly, C.I.E., D.S.O.

3. R. S. Champion.
4. Lt-Col M. C. Lake (Aden Protectorate)
5. Mr C. Denny (Perim)

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced, and its powers were exercised by the President, the immediate precursor of the Secretary of State for India. With modifications, this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measure passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control or in the Company, the Directors and the Secret Committee in respect of the government and revenues of India.

The Secretary of State

Until the Reform Act of 1919 came into force, the Secretary of State had the unqualified power to give orders to every officer in India, including the Governor General, and to superintend, direct and control all acts, operations and concerns relating to the government or revenues of India. In the relations of the Secretary of State with the Governor General in Council no express statutory change was made, but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified, only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement.

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility, others can be performed only in consultation with his Council, and for some of those the concurrence of a majority of the members of his Council is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council, and he has fuller power than in the past to prescribe the manner in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement, the law now providing that there shall be a meeting at least once in every month.

The India Council

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to Parliament, re-appoint a member for another five years. Half the Council must be persons who have served or resided in India for at least

ten years, and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of Indian members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, and are subject to the ordinary Home Civil Service rules in all respects.

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total cost now is about £230,000. In conformity with the spirit of the 1919 Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and most of the outlay needed for the controlling and political functions exercised in Whitehall is met from British revenues, agency functions being still chargeable to Indian revenues. The contribution from the Treasury to India Office administrative expenses is about £115,000.

The High Commissionership.

The financial readjustment was accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India in the United Kingdom with necessary establishments. From October 1st, 1920, the High Commissioner took over control of the purchase of Government stores in England and the Indian Students Branch, together with the supervision of the work of the Indian Trade Commissioner. The further development of the functions and powers of the High Commissioner have included such agency work as the payment of Civil leave allowances and pensions, the recruitment of technical officers, supervision of I.C.S. and Forest probationers after first appointment, the making of arrangements for officers on deputation or study leave, repatriation of disallowed leave, sale of Government of India publications, etc. The staff of the Stores Department is located at the Depot of the Thames in Belvedere Road, Lambeth. The High Commissioner and the rest of the staff, also at India House, Aldwych W.C.2, built to the designs of Sir Herbert Baker at a cost for construction and equipment of £324,000. There could be no question of adopting a distinctive Oriental style for the exterior, but there are enough Indian features of ornamentation to produce the Eastern association of the place. Moreover, the Exhibition Hall (typically Indian in design) has five windows on two sides for display of specimens of the arts and crafts and commerce of India.

Parliament has set up since 1920 a Joint Standing Committee on Indian affairs consisting of eleven members of each House. The purpose is to keep Parliament in closer touch with Indian affairs and to refer to the Committee draft rules and also Parliamentary Bills after they have received a second reading.

INDIA OFFICE

Secretary of State.

The Rt. Hon W Wedgwood Benn, D.S.O., D.F.C.
M.P.

Under Secretaries of State.

Sir Eadweard Stewart, K.C.I.B., C.B.
Vacant.

Deputy Under-Secretary of State

Sir Malcolm Seaton, K.C.B.
Assistant Under Secretaries of State.
Sir Louis Ker Gaw, K.C.S.I., C.I.E.
L. D. Wakely, C.B.

Council.

Sir William H. H. Vincent, G.C.I.B., K.C.B.
Sir Reginald A. Munt, K.C.I.B., C.B.
Sir Robert Erskine Holland, K.C.I.B., C.B.,

* Sir B. N. Mitra, K.C.S.I., K.C. I.E., has
been appointed to succeed Sir A. C. Chatterjee
as High Commissioner with effect from 1st
July 1931

Secretaries of State for India

	Assumed charge
Lord Stanley (Earl of Derby)	1858
Sir Charles Wood, Bart. (Viscount Halifax)	1859
Earl de Grey and Ripon (Marquess of Ripon)	1860
Viscount Cranborne (Marquess of Salisbury)	1866
Sir Stafford Northcote, Bart. (Earl of Idelburgh)	1867
Duke of Argyll	1868
Marquess of Salisbury	1874
Viscount Cranbrook	1878
Marquess of Hartington (Duke of Devon- shire)	1880
Earl of Kimberley	1882
Lord Randolph Churchill	1886
Earl of Kimberley	1888
Viscount Cross	1889
Earl of Kimberley	1892
H. H. Fowler (Viscount Wolverhampton)	1894
Lord George F. Hamilton	1895
Sir John Brodick (Viscount Middleton)	1903
John Morley (Viscount Morley)	1905
The Earl of Crewe, (Marquess)	1911
Amson Chamberlain	1915
H. S. Montagu	1917
Viscount Peel	1922
Lord Olivier	1924
Lord Birmenshead	1924
Viscount Peel	1928
W. Wedgwood Benn	1930

The area enclosed within the boundaries of India is 1,773,168 square miles, with a population of 316,139,297 of people—nearly one fifth of the human race. But of this total a very large part is not under British administration. The area covered in the Indian States is 675,267 square miles with a population of seventy millions. The Indian States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 12 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth and Kashmir, one of the most favoured spots on the face of the globe.

Relations with the Paramount Power

So diverse are the conditions under which the Indian States were established and came into political relation with the Government of India that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Government considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Indian States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions, and while we will permit no aggression on our dominions or our rights to be attempted with impunity we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government. Since the issue of that proclamation there has been no encroachment on the area under Indian rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great tahnqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene, to prevent gross misgovernment, or to carry on the administration during a long minority, but

always with the undeviating intention of restoring the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Indian States.

The rights and obligations of the Indian States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Indian States. The inhabitants of the Indian States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to an Indian State must be handed over to it by its authorities, they cannot be arrested by the police of British India without the permission of the ruler of the State. The Indian Princes have therefore a sovereign power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The Emperor also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases, applied to maritime States, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Indian States.

On the other hand, the Indian States are under an obligation not to enter into relations with foreign nations or other states, the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Indian States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Indian States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute, logic and public opinion have endorsed the principle which Lord Curzon set forth in his minute of 1890, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge

subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where no limitations exist in an Indian State, jurisdiction both over the suzerain and the vassal is exercised by the suzerain power.

Political Officers

The powers of the British Government are exercised through Political Officers who, as a rule reside in the states themselves. In the larger states the Government is represented by a Resident, in groups of states by an Agent to the Governor General assisted by local Residents or Political Agents. These Officers form the sole channel of communication between the Indian States and the Government of India and its Foreign Department, with the officials of British India and with other Indian States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose districts they lie. All questions relating to the Indian States are under the special supervision of the Supreme Government, and in the personal charge of the Governor General.

Closer Partnership.

Events have tended gradually to draw the Paramount Power and the Indian States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs first by the employment of tutors and afterwards by the establishment of special colleges for the purpose. There are now established at Aynore Rajkot, Indore and Lahore. The Imperial Cadet Corps, whose headquarters are at Dehra Dun, imparts military training to the sons of the ruling chiefs and noble families. The spread of higher education has placed at the disposal of the Indian States the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Indian States, approximating more closely to the British ideal. Most of the Indian States have also come forward to bear their share in the

burden of Imperial defence. Following on the spontaneous offer of military assistance when war with Russia appeared to be inevitable over the Peshawar Incident in 1885, the States have raised a portion of their forces up to the standard of the troops in the Indian Army. These were until recently termed Imperial Service Troops but are now designated Indian State Forces, they belong to the States, they are officered by Indians but they are inspected by a regular cadre of British officers under the general direction of an Inspector General. Their numbers are approximately 22,000 men, their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs on the Frontier and in China, in Somaliland and in the Great War. Secure in the knowledge that the Paramount Power will respect their rights and privileges the Ruling Chiefs have lost the suspicion which was common when their position was less assured, and the visits of the Prince of Wales in 1875, of the Prince and Princess of Wales in 1905-06 and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Indian States. The new policy was authoritatively laid down by Lord Minto, the then Viceroy, in a speech at Udaipur in 1909 when he said—

Our policy with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of fraternity. The foundation stone of the whole system is the recognition of identity of interests between the Imperial Government and Rulers and the minimum of interference with the latter in their own affairs.

HYDERABAD

The Nizam exercises full sovereignty within his domains, grants titles and has the power of life and death over his subjects. Before 1919 the Government consisted of a Prime Minister responsible to the Nizam with Assistant Ministers, but in this year, an Executive Council was established which now consists of seven members. A legislative Council consisting of 20 members of whom 12 are official and non-official is responsible for making laws. The administration is carried on by a regular system

of departments on lines similar to those followed in British India. The state is divided into two divisions—Ichangana and Mahabubnagar—12 Districts and 103 Taluqs. Local Boards are constituted in each District and Taluqa. The State maintains its own currency which consists of gold and silver coins and a large note issue. The rupee, known as the Gomania Rupee, exchanges with the British Indian rupee at an average ratio of 116 to 100. There is a State postal service and stamps for internal purposes. The

Nizam maintains his own army consisting of 18,235 troops of which 6,849 are classed as regular troops and 11,384 as irregular. In addition to these, there are two battalions of Imperial Service Troops, 1,062 strong

FINANCE—Hyderabad State is far the wealthiest of the Indian States, having a revenue in its own currency of over 84 crores which is approximately the same as that of the Central Provinces and Bihar and Orissa and double that of any other State. After many vicissitudes, its finances are at present in a prosperous condition and it enjoys a large annual surplus of revenue from which a reserve of 8 crores has been built up. This is being used partly as a sinking fund for the redemption of debt and partly for the development of the resources of the State. The budget estimates for the present year show a revenue of 839 lakhs under service heads and an expenditure of 781 lakhs, inclusive of large sums set aside for development, famine insurance and reserve for re-organisation and development. The capital expenditure programme provides for an expenditure of 169 lakhs, which includes 60 lakhs for the large irrigation project known as Nizam Sagar and other sanctioned projects and 92 lakhs for the construction of feeder lines. The year opened with a cash balance of 219 lakhs which is expected to be about 149 lakhs by the end of the year. The Government loans stand at 103 for short term and 117-4-0 for long term issues.

PRODUCTION AND INDUSTRY—The principal industry of the State is agriculture which maintains 57 per cent of the population. The common system of land tenure is ryotwari. About 55 per cent of the total area is directly administered by the State. The rest consists of private estates of His Exalted the Nizam, which comprise about one-tenth of the total area of the State, and the estates of the Jagirdars and Patil nobles. The total land revenue is over 3 crores. The principal food crops are millet and rice, the staple money crops cotton which is grown extensively on the black cotton soils and oilseeds. Hyderabad is well known for its Gaurani cotton which is the longest staple indigenous cotton in India. The total area under cotton exceeds 3 million acres. Hyderabad possesses the most southerly of the Indian coal mines and the whole of southern India is dependent on it for such coal as is transported by rail. The chief mine is situated at Singareni which is not far from Berwada junction on the Calcutta-Madras line. The chief manufacturing industry is based on the cotton produced in the State. There are five large mills in existence and others are likely to be established while about one-third of the cloth worn in the Dominions is produced on local hand-looms. There are about 287 ginning and pressing factories in the cotton tracts and also a number of tanneries and flour mills. The total number of factories of all kinds in the State being 601. The Shahabad Cement Co. which has been established at Shahabad on the Great Indian Peninsula Railway line, not far from Wadi, supplies the whole of southern India with cement and has at present an annual output of about 72,000 tons.

TAXATION—Apart from the land revenue

which as stated above brings in about 3 crores the main sources of taxation are excise and customs. The receipts from each are estimated for the present year at 168 and 140 lakhs respectively. After these come interest on investments (51 lakhs), railways (58 lakhs) and Bazar rent (39 lakhs). The customs revenue is derived from an *ad valorem* duty of 5 per cent on all imports and exports.

COMMUNICATIONS—One hundred and thirty seven miles of broad gauge line from Bombay to Madras traverse the State. At Wadi, on this section, the broad gauge system of the Nizam's Guaranteed State Railway takes off and running east through Hyderabad City and Warangal reaches the Calcutta-Madras line at Berwada a total length of 380 miles. From Kasipet, near Warangal on this line a new link to Bellarahah strikes north thus providing the shortest route between Madras and Delhi. From Secunderabad the metre gauge Godavari Valley railway runs north west for 386 miles to Masnad on the main line of the Great Indian Peninsula Railway to Calcutta. A metre gauge line also runs south from Secunderabad through Mahbubnagar nearly to the border and is now linked up with Kurnool on the Madras and Southern Mahratta Railway. Branch lines exist from Purna to Hingoli, Farbhani to Purna, Kasipalli to Kothagudum and Vikharabad to Bidao. Thus, with branch lines there are now 560 miles of broad gauge and 623 of the metre gauge in the State. The Bareilly Light Railway owns a short extension from Kurwad on the Bombay-Madras line to Latur in Osmanabad District. The Nizam's Guaranteed State Railway was worked by a Company until April 1930 when it was purchased by the Nizam's Government. The road system is incomplete at present but is being rapidly extended on a well considered programme.

EDUCATION—The Osmania University at Hyderabad which marks a new departure in Indian education imparts instruction in all the faculties through the medium of Urdu. English being taught as a compulsory language. It has one First Grade College, four Intermediate Colleges, a Medical College, an Engineering College and a Training College for teachers. The Nizam College at Hyderabad (first grade), is however affiliated to the Madras University. In 1929-30 the total number of Educational Institutions were 4,246, the number of Primary Schools in particular having been largely increased.

EXECUTIVE COUNCIL—Raja Rajayan Rajah Sir Kishen Pershad Maharaja Bahadur, Yamlur Suktanath C.I.E., President. Nawab Wahid Dowlat Bahadur Education, Medical and Military Departments. Member. Nawab Sir Akbar Hydar, Finance and Railway Member; Lt Col Chenevix-Trench, C.I.E., O.B.E. Revenue and Police Member, Nawab Lutful Dowlat Bahadur, Judicial Member, Nawab Aqel Jung Bahadur, Public Works Member. Nawab Mahdi Yar Jung Bahadur Political Member.

BRITISH RESIDENT—The Hon'ble Lt-Col T. H. Keyes, C.M.G., C.B.E., C.I.E.,

MYSORE.

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and the north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the north-west by Coorg. It is naturally divided into two regions of distinct character, the hill country (the mauland) on the west and the wide spreading valleys and plains (the maldan) on the east. The State has an area of 28,475 square miles extending that of the Civil and Military Station of Bangalore and a population of 5,850,523 of whom over 92 per cent. are Hindus. Kannada is the distinctive language of the State.

HISTORY.—The ancient history of the country is varied and interesting. Tradition connects the table land of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. Coming down to historical times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B.C. Mysore then came under the rule of the Andhra dynasty. From about the third to the seventh century A.D. Mysore was ruled by three dynasties, the north-western portion by the Kadambas, the eastern and northern portions by the Pallavas and the central and the southern portions by the Gangas. In the seventh century, Mysore formed part of Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas, an indigenous dynasty with its capital at Halebidu. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar empire. At the end of the fourteenth century Mysore became associated with the present ruling dynasty. At first tributary to the dominant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century the real sovereignty passed into the hands of Hyder Ali and then his son, Tipu Sultan. In 1799, on the fall of Seringapatam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wodeyar Bahadur III. Owing to the insurrections that broke out in some parts of the country the management was assumed by the British Government in 1831. In 1881 the State was restored to the dynasty in the person of Sri Chamarajendra Wodeyar Bahadur under conditions and stipulations laid down in the Instrument of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Satcha- dri Iyer, B.A.L., as Dewan, brought Mysore to a State of great prosperity. He died in 1894, and was succeeded by the present Maharaja Colonel Sir Sri Krishnarajendra Wodeyar Bahadur, C.S.I., C.M.S., who was installed in 1902. In November 1919 the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore.

ADMINISTRATION.—The City of Mysore is the Capital of the State, but Bangalore City is the Administrative headquarters. His Highness the Maharaja is the ultimate authority in the

State, and the administration is conducted under his control, by the Dewan and three Members of Council. The High Court consisting of three Judges is the highest Judicial tribunal in the State. There are two constitutional Assemblies in the State—the Representative Assembly and the Legislative Council. The Representative Assembly was established in 1921 by an executive order of Government, and its powers and functions have been increased from time to time by similar orders of Government. Under the scheme of constitutional developments announced in October 1923 the Representative Assembly has been placed on a statutory basis and given a definite place in the constitution by the promulgation of the Representative Assembly Regulation XVIII of 1923. The franchise has been extended and the disqualification of women on the ground of sex, from exercising the right to vote has been removed. The privilege of moving resolutions on the general principles and policy underlying the budget and on matters of public administration has been granted in addition to those already enjoyed of making representations about wants and grievances and of interpellating Government. The Assembly is also to be consulted on all proposals for the levy of new taxes and on the general principles of all measures of legislation before their introduction into the Legislative Council. Besides the Budget Session (formerly Birthday Session) and the Desam Session, provision has been made for a special session of the Assembly to be summoned by only for Government business.

The strength of the Legislative Council has been raised from 20 to 50, of whom 20 are official and 30 are non-official members. The Council which exercised the privileges of interpellation discussion of the State Budget and the moving of the resolutions on all matters of public administration is, under the reformed constitution, granted the powers of voting on the demands for grants. The Dewan is the Ex-officio President of both the Representative Assembly and the Legislative Council.

The Legislative Council has also a Public Accounts Committee which examines all audit and appropriation reports and brings to the notice of Council all deviations from the wishes of the Council as expressed in its Budget grant.

STANDING COMMITTEES.—With a view to enlarge the opportunities of non-official representatives of the people to influence the every day administration of the State three Standing Committees consisting of Members of the Representative Assembly and the Legislative Council, have been formed, one in connection with Railway, Electrical and P. W. Departments, one in connection with Local Self-Government and the Departments of Medicine, Sanitation and Public Health and the third in connection with Finance and Taxation.

All the important branches of the administration are controlled by separate Heads of Departments. The combatant strength of the Military Force at the end of 1923-24 was 2,204 of which 628 were in the Mysore Infantry, 122 in the

Mysore Horse, 83 in the Transport Corps, and the remaining 1,540 in the Infantry. The total annual cost is about 18 lakhs of rupees. The cost of the Police Administration during 1927-28 was about 18 lakhs.

FINANCE.—The actual total receipts and disbursements charged to Revenue for the past five years together with the revised budget estimate for 1929-30 and budget for 1930-31 were as below:—

Year	Receipts	Disbursements	Surplus	Deficits.
	Rs.	Rs.	Rs.	Rs.
1924-25	3,30,02,390	3,36,35,870	+26,420	
1925-26	3,46,38,960	3,46,02,686	+36,274	
1926-27 (Accts.)	3,38,08,349	3,47,30,906		-8,70,557
1927-28	3,60,86,978	3,60,49,590	+40,688	
1928-29	3,74,57,981	3,74,02,595	+55,386	
1929-30 (Revised)	3,73,81,000	3,73,51,000	+30,000	
1930-31 (Budget)	3,79,82,000	3,79,26,000	+56,000	

AGRICULTURE.—Nearly three-fourths of the population are employed in agriculture, and the general system of land tenure is ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugar cane, and the chief fibres are cotton and sun-emp. Nearly fifty thousand acres are under mulberry, the silk industry being the most profitable in Mysore next to Gold Mining. A Superintendent of Sericulture has been appointed and the Sericultural Department affiliated to the Industries and Commerce Department. Arrangements are being made for the supply of disease-free seed, and a central and five taluk popular schools have been doing good work. The Department of Agriculture is popularizing agriculture on scientific lines by means of demonstrations, investigations and experiments. There are six Government Agricultural Farms at Hebbal, Babbar, near Hiriya, Marthar, Nageshalli, Lunad and the coffee experimental Station at Balehonnur. A live-stock section has been organized which has been taking necessary steps for the improvement of live-stock. A cattle breeding station is being established at Parvatharayana, near Ajjampur in the Kader District, and a Serum Institute has been opened at Bangalore for the manufacture of serum and vaccines for inoculation against the rinderpest disease of cattle.

INDUSTRY AND COMMERCE.—A Department of Industries and Commerce was organized in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for procuring industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. Mysore is the largest producer of silk in India, and the care and government of this industry is entrusted to a Dept. of Sericulture which is under the control of the Director of Industries and Commerce. The sandalwood oil factory started on an experimental basis is now working on a commercial scale. A factory is working at Bangalore, and another at Mysore. A large plant at a cost of more than 170 lakhs of rupees has been constructed at Bhadravathi for purposes of manufacturing charcoal, pig-iron, distilling wood-alcohol, and developing subsidiary industries. A new iron foundry was opened at Bhadravathi for the manufacturers of pipes which are in great demand in several municipal towns

in India. The works are on the borders of an extensive forest area and practically at the foot of the hills containing rich deposits of iron manganese and haematite, and are not far from the Gersappa Water Falls estimated to be capable of producing 100,000 horse-power of electric energy. A Trade Commissioner in London has been recently appointed to look after the interest of the trade and industry of the State.

HYDRO-ELECTRIC AND IRRIGATION WORKS.—The river Cauvery in its course through the State, possesses a natural fall of about 580 feet near the island of Sivassamudram, and this fall was harnessed in the year 1902 for the development of electric power, to the extent of about 12,000 H. P. for supplying mainly to the Kolar Gold Mining Companies and incidentally for lighting the cities of Mysore and Bangalore. In course of time, the demand on the power station increased and with a view to protecting the existing supply and augmenting the generation of additional power to meet the growing demands, the "Krishnarajasagara Reservoir" called after the name of the present Maharaja was constructed. The storage from the reservoir besides enabling the generation of electric power up to 48,000 H. P. will also bring under irrigation about 1,20,000 acres of land situated in an area subject to more or less continuous drought. The new Canal Works are now in progress, and the main Canal is named the "Irwin Canal" after the present Viceroy. Full advantage is being taken of the available electric power for small industries and the electrification of towns and lift irrigation.

EDUCATION.—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central, and Engineering Colleges at Bangalore and the Medical Maharaja's and Maharani's Colleges at Mysore, and five Intermediate Colleges with head quarters at Mysore. The colleges are efficiently equipped and organized and there is a training college for men located at Mysore. The Maharani's College at Mysore is a College for Women.

With the introduction of compulsory education in select centres and the increase in the number of village schools, primary education has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering and other technical subjects. There were altogether 3,886 institutions on 31st March

1929 This gives one school to every 3.58 square miles of the area and to every 726 of the population. An Elementary Education Regulation to provide for the progressive expansion and development of elementary education in the State has been recently passed. Under the Regulation local bodies are invested with powers for providing and controlling elementary education.

Resident in Mysore and Chief Commissioner of

Coorg—The Hon. Lieut. Col. R. J. C. Burke,
Dewan.—Amin ul Mulk Sh., Mirza Mahomed
Jamaal Oid, O.S.

Members of the Executive Council—Rajkaryas-
pranaka Diwan Bahadur, M. N. Krishna Rao,
B.A. First Member of Council, Rajamantrapra-
vina C. S. Balasundaram Iyer, M.A., 2nd
Member of Council and Rajamantrapravina
K. Nathan, B.A., Third Member of Council.

BARODA

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four district blocks: (1) the southern district of Navsari near the mouth of the Tapi river, and mostly surrounded by British territory, (2) central district, North of the Narbada, in which lies Baroda the capital city, (3) to the North of Ahmedabad the district of Kadi, and (4) to the West, in the Peninsula of Kathiawar, the district of Amreli, formed of scattered tracts of land. The area of the State is 8,185 square miles, the population is 2,126,522 of whom over four fifths are Hindus.

HISTORY—The history of the Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Peshwa Baji Rao, who may be considered as the founder of the present ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Peshwa regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1734, since then it has always been in the hands of the Gaikwars, but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1763, after which the country was divided between the Gaikwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I, Fatehgar Rao, Manaji Rao and Govind Rao. The last died in 1800, and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1806 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Bajji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II was Gaikwar, differences arose between the two Governments, which were settled by Sir James

Carnac Governor of Bombay in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule, the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao, who ascended the Gadi in 1866, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre the Resident was not proved. Sayaji Rao III, a boy of 15 years of age, who was descended from a distant branch of the family was adopted as heir of Khande Rao in 1875 and is the present Gaikwar. He was invested with full powers in 1881.

ADMINISTRATION—An executive council consisting of the principal officers of the State carries on the administration subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided into four *prants*, each of which is sub-divided into *Mahals* and *Pate Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village *panchayats* have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court, appeals lie in certain cases, to the Maharaja, who decides them on the advice of the Hunar Nyaya Sabha. The State Army consists of 5,086 Regular forces and 3,806 Irregular forces.

FINANCE—In 1928-29 the total receipts of the State were Rs. 2,49,00,000 and the disbursements Rs. 2,11,18,000. The principal Revenue heads were—Land Revenue, Rs. 94,32,000; Abkari, Rs. 38,02,000; Opium, Rs. 5,34,000; Railways, Rs. 15, 68,000; Interest, Rs. 18, 83,000; Tribute from other States, Rs. 3,45,000. British Currency was introduced in 1901.

PRODUCTION AND INDUSTRY—Agriculture and pastoral support 63 per cent of the people. The principal crops are rice, wheat, gram, mustard, oil, rapeseed, poppy, cotton, sun hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on ryotwari tenure. The State contains few minerals, except sandstone which is quarried at Sonagar, and a variety of other stones which are little worked. There are 73 industrial or commercial concerns in the State registered under the State Companies Act. There are four Agricultural Banks and 750 Co-operative Societies in the Baroda State.

COMMUNICATIONS—The B & C I Railway crosses part of the Narsari and Baroda prants and the Rajputana Malwa Railway passes through the Kadi prant. A system of branch lines has been built by the Baroda Durbar in all the four prants in addition to which the (apt) Valley Railway and the Baroda (Godhra) Chord line (B & C I) pass through the State. The Railways constructed by the State are about 669 miles in length. Good roads are not numerous.

EDUCATION—The Education Department controls 2,996 institutions of different kinds in 76 of which English is taught. The Baroda

College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and uncivilized castes. The State is "in a way pledged to the policy of free and compulsory primary education." It maintains a system of rural and travelling libraries. Ten per cent of the population is returned in the census as literate. Total expenditure on Education is Rs 32,88,520.

CAPITAL CITY—Baroda City with the cantonment has a population of 94,712. It contains a public park, a number of fine public buildings, palaces and offices, and it is crowded with Hindu temples. The cantonment is to the north west of the city and is garrisoned by an infantry battalion of the Indian Army. An Improvement Trust has been formed to work in Baroda City and has set itself an ambitious programme.

RULER—His Highness Farzand-i-Khas-i-Dowlat, Englishia Maharya Sur baya; Rao Gaekwar Sena Khas Khel, Sansher Bahadur, G.C.I.E., G.C.I.E. L.D. Mah rya of Baroda.
Resident—Lt Col D G Wilson

Deewan—Rao Bahadur V T Krishnamachari, C.I.E.

BALUCHISTAN AGENCY

In this Agency lies the State of Kalat with its feudatory State of Las Bela.

Kalat is bounded on the North by the Chagai district, on the East by Sind and the Marri, Magri tribal territories, on the South by the Arabian Sea and on the West by Persia.

The State includes the tribal territories of the Chiefs of the Brahui Confederacy of which the Khan of Kalat is Head. The divisions of the State are Sarawan or the Highlands, Jhalawan or the Lowlands, Kachhi, Makran, the Khanate of Kharan and the feudatory State of Las Bela. The inhabitants are for the most part Brahui or Baluch, both being Muhammadans of the Sunni sect. The area of Kalat with Las Bela is 80,410 sq. miles. The country is sparsely inhabited, the total population being about 379,000.

The relations of Kalat with the British Government are governed by the treaties of 1864 and 1876 by the latter of which the independence of Kalat was recognised while the Khan agreed to act in subordinate co-operation with the British Government. There are also agreements with Kalat in connection with the construction of the Indo-European telegraph line, the cession of jurisdiction on the railways and in the Bolan Pass and the permanent lease of Quetta, Nushki and Nasirabad.

The Khan is assisted in the administration of the State by a Wazir-i-Azam at present a

retired officer of the British service. The Governor General's Agent in Baluchistan controls the relations between the Government of India and the Khan, and exercises general political supervision over the State. The revenue of the State is about Rs 18,41,500, out of which the Khan retains a civil list of Rs 3,50,000 per annum. The present Khan is His Highness Beglar Begi Sir Mir Mahmud Khan of Kalat, G.C.I.E. He was born in 1864.

Las Bela is a small State under the suzerainty of Kalat. The Hab river for the Southern part of its course forms the Eastern boundary with Sind, and the greater part of the State consists of the valley and the delta of the Parul river. Area 7,192 square miles, population 50,608 chiefly Sunni Muhammadans. The estimated average revenue is about Rs 3,81,000. The Chief of Las Bela, known as the Jam, is bound by agreement with the British Government to conduct the administration of his State in accordance with the advice of the Governor General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir to whose advice he is subject and who assists him generally in the transaction of State business.

Agent to the Governor General for Baluchistan—Hon'ble Lt Col Sir H D St John, K.C.I.E., C.B. (on leave)

RAJPUTANA AGENCY

Rajputana is the name of a great territorial circle with a total area of about 131,698 square miles, which includes 19 Indian States, one chieftainship, and the small British district of Ajmer-Merwara. It is bounded on the west by Sind, on the north west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Indian States and Chieftainship 17 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer who holds the post of Governor-General's Agent for the supervision of the relations between the several Indian States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups—Bikaner and Sirsahi in direct relations with the Agent to the Governor-General Eastern Rajputana Agency 5 States (Bharatpur Dholpur Karnali, Alwar and Kotah) Haroti and Tonk Agency, 4 States (Bundi Jhalawar, Shahpura and Tonk) Jaipur Residency, 2 States (Jaipur and Kishanganah) Mewar Residency and Southern Rajputana States Agency, 3 States (Dangarpur Banswara and Pratargarh and the Kishanganah Chieftainship) Western Rajputana States Residency, 2 States (Jodhpur and Jaisalmer).

The Aravalli Hills intersect the country almost from end to end. The tract to the north west of the hills is, as a whole, sandy, ill watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravalli Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS—The total length of rail ways in Rajputana is 3,254 miles, of which 100 are the property of the British Government. The B. & C. I. (Vetro-gange) (Government) runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Indian State railways the most important are the Jodhpur and Bikaner lines from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS—Over 50 per cent of the population are engaged in some form of agriculture about 20 per cent of the total population are maintained by the preparation and supply of material substances personal and domestic service provides employment for about 5 per cent and commerce for 24 per cent of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous are the Brahmins Jais Mahajans, Chamais, Rajputs, Minas, Gujars, Billis, Malis and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of

rent or as cultivators. By reason of their position as integral families of pure descent, as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India, and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with, one of these Rajput stocks.

The population and area of the States are as follows—

Name of State	Area in square miles	Population in 1921
<i>In direct Political relations with A G G—</i>		
Bikaner	2,39,012	669,685
Sirsahi	1,904	186,639
<i>Mewar Residency—</i>		
Udaipur	12,915	1,406,990
<i>Southern Rajputana States Agency—</i>		
Banswara	1,606	190,362
Dangarpur	1,447	189,272
Pratargarh	896	67,110
Kishanganah (Chieftainship)	340	29,162
<i>Western State Residency—</i>		
Jodhpur	37,066	1,848,825

Udaipur State (also called Mewar) was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by His Highness the Maharana's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur Chittor Railway 697 miles north of Bombay. His Highness Maharaja Adhiraj Maharana Sir Fateh Singhji Bahadur, G.C.I.E., G.C.V.O., who was born in 1849 and succeeded in 1884 died in 1930. He was succeeded by Sir Bhupal Singhji Bahadur, K.C.I.E. The revenue and expenditure of the State are now about 50 lakhs a year respectively. Its archaeological remains are

numerous, and stone inscriptions dating from the third century have been found.

Banswara State is the southernmost State of Rajputana within the Political Agency of the Southern Rajputana States. The area of the State is 1,946 square miles and the population 219,824 souls. It is thus in regard to size eleventh among the States of Rajputana. Dungarpur originally formed a county known as Bagar, which was, from the beginning of the thirteenth century until about the year 1720 held by certain Rajput Rulers of the Ghelot or Shishodiya clan who claimed descent from an elder branch of the family of now ruling in Udaipur. After the death of Rawal Udas Singhji the ruler of Bagar about 1529 his territory was divided between his two sons Prithvi Singhji and Jagnal Singhji and the descendants of the two families are now respectively the Rulers of Dungarpur and Banswara. When the town of Banswara now stands there was a large Bhil pal or colony under a powerful Bhil Chieftain named Wasna who was defeated and slain by Maharawal Jagnal Singhji about 1430. The name of Banswara is by tradition said to be a corruption of Wasnawara or the country of Wasna. Others assert that the word means the country (nara) of bamboos (bans). Nearly three centuries after its foundation by Maharawal Jagnal Singhji, Maharawal Bhai Singhji anxious to get rid of the supremacy of the Mahrattas offered to become a tributary to the British Government. In 1818 a definite treaty was made with his successor Maharawal Umed Singhji. Banswara has been described as the most beautiful portion of Rajputana. It looks at its best just after the rains. The principal rivers are the Mahi, the Anas, the Dhan, the Chap and the Hiran.

The present Ruler is His Highness Ravan Rai Maharaja Bhairaj Maharawalji Sahib Shree Prithvi Singhji Bahadur who was born on July, 1898 and is the 21st in descent from Maharawal Jagnal Singhji. His Highness was educated in the Mayo College and succeeded his father in 1914. His Highness is entitled to a salute of 15 guns. The State is ruled by His Highness the Maharawalji Bahadur in consultation with the assistance of the Diwan and the Home Minister and the Judicial and the Legislative Council of which the Diwan is the President and the Vice-President, Maharaj Raj Kumar Bahadur Shri Chandravar Singhji Bahadur is a member. The revenue of the State is about 7 lakhs and the expenditure is about the same.

Diwan—Mr R. K. Chatterjee, B.A., Bar at Law.

Home Minister—Mr Nand Lal Banerjee.

Dungarpur State, with Banswara, formerly comprised the country called the Bagar. It was invaded by the Mahrattas in 1818. As in other States inhabited by hill tribes it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the Gads, the eldest branch of the Sindhas and dates its separate existence from about the close of the 12th Century. Samant Singh,

King of Chitor, when driven away by Kirtipal of Jalor, fled to Bagad and killed Chowmadmal, Chief of Baroda, and founded the State of Dungarpur. The present Chief is His Highness Rai Rajan Maharajadhiraj Maharawal Shri Lakshman Singhji born on 7th March 1906, succeeded on 16th November 1918 and assumed charge of the administration on the 16th February 1923. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant. Revenue about 6½ lakhs.

Partabgarh State, also called the Kaxthal, was founded in the sixteenth century by a descendant of Rana Mokal of Mewar. The town of Partabgarh was founded in 1608 by Partab Singh. In the time of Jaswant Singh (1775-1844), the country was overrun by the Marathas, and the Maharawat only saved his State by agreeing to pay Holkar a tribute of *Sahm Shahi* Rs. 72,700 (which then being coined in the State Mint was legal tender throughout the surrounding Native States), in lieu of Rs. 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804 but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty by which the State was taken under protection was made in 1818. The tribute to Holkar was paid through the British Government and in 1904 was converted to Rs. 38,350 British currency. The present ruler is His Highness Maharawat Ram Singh Bahadur who was born in 1903 and succeeded in 1920. The State is governed by the Maharawat with the help of the Dewan, and, in judicial matters, of a Committee of members styled the Raj Sabha or State Council. Revenue about 5½ lakhs, expenditure nearly 5½ lakhs. The financial administration is under the direct supervision of the State.

Jodhpur State, is the largest in Rajputana with an area of 35,016 miles, and a population of more than 18 millions of which 63 per cent are Hindus, 8 per cent Mussmans and the rest Jains and Animists. The greater part of the country is an arid region. It improves gradually from a mere desert to comparatively fertile land as it proceeds from West to East. The rainfall is scanty and capricious. There are no perennial rivers and the supply of sub-soil water is very limited. The only important river is Lun.

The Maharaja of Jodhpur is the head of the Rathor clan of Rajputs and claims descent from Rama the deified King of Ayodhya (a deity). The earliest known King of the Clan named Abhimanyu lived in the fifth century, from which time their history is increasingly clear. After the breaking up of their kingdom at Kanauj they founded this State about 1212 and the foundations of the Jodhpur City were laid by Rao Jodha in 1459. He had abolished the tax levied by Hussain Shah of Jaunpur from Hindu pilgrims at Gaya. His descendant was the famous Rao Maldeva, the most powerful ruler of his time having an army of 50,000 Rajputs and the Emperor Humayun when expelled by Sher Shah in 1542 A.D. had sought refuge with him. Raja Sur Singh, son of Raja Udas Singh, in recognition of his deeds of valour was created a 'Bawal Raja' with a mansab of 5,000 Zat.

3,300 Bowers by the Emperor Akbar. Maharaja Jaswant Singh I with whom the secret hostility of Emperor Aurangzeb are well known was once a pillar of the Indian Empire and a great defender of the Hindus, and their temples. He was also a patron of learning and himself wrote books on Philosophy, Poetry and other profound subjects. After his demise Aurangzeb confiscated Marwar and Asheraja Jaswant Singh a posthumous son and successor Maharaja Ajit Singh had to pass 8 years in hiding in mountains and subsequent 20 years in constant wars with Aurangzeb's army with the help of his nobles chief of whom was the famous hero Durga Dasa before he ascended the throne of Marwar. In the time of Maharaja Bheem Singh a later descendant of the same time one of the richest districts viz Godwar was finally acquired from Mewar and annexed to Marwar. The State entered into a treaty of alliance with the British Government in 1818.

The present ruler Major His Highness Raj Rajeshwar Saramad Raja Hrud Maharaja Dhiraaj Maharaja Sri Sri Yashvi Singhji Sahib Bahadur G.C.I.E. K.C.S.I. K.C.V.O. is the head of Rathors and is the 32nd ruler from Rao Bhoji. His Highness was born on 11th July 1903 and is now in the 24th year of his age. He succeeded his elder brother on 3rd October 1918. He was educated at the Mayo College Ajmer and was invested with full ruling powers on 27th January 1923. In October of the same year he was granted the rank of honorary Captain in the British Army made a Knight Commander of the Royal Victorian Order in March 1921 and was elevated to the Rank of Honorary Major in June 1923. He was created K.C.S.I. on 3rd June 1923 and invested with G.C.I.E. on the 1st January 1930. His Highness was married in November 1921 and has three sons, the heir-apparent being Maharaj Kumar Sri Hanut Singhji Sahib born on 18th June 1923. His Highness the Maharaja Sahib Bahadur has one younger brother Maharaja Sri Ajit Singhji Sahib and two sisters, the elder of whom is Maharani of Jaipur and the younger the Maharani of Rewa.

His Highness is greatly interested in educational, athletic, and progressive institutions generally of modern times both in India and abroad and has always exhibited his sympathy with them by liberal donations. An example of this can be easily found in the donation of 3 lakhs made by His Highness for founding the Irwin Chair of Agriculture at the Benares Hindu University. He is a keen sportsman Polo player and first rate shot. His favourite pastimes are pig-sticking, fishing, shooting and photography.

His Highness enjoys a salute of 19 guns within his own territories and 17 guns elsewhere.

The administration is carried on with the aid of a State Council composed of His Highness the Maharaja Sahib Bahadur President, Lt Col C J Windham (I.E.S.) (retired) Vice-President Mr J W Young O.B.E. (Indian Finance Department) Finance Member Rao Bahadur Thakur Chalo Singhji M.A. LL.B. Judicial Member Rao Bahadur Rao Raja Narpat Singhji, Member-in-Waiting, and Munshi Himmat Singhji, M.A. Revenue Member. There is also an Advisory Committee representing

the great body of Sardars who hold as much as five-sixths of the total area to aid the administration with opinion on matters affecting general customs and usage in the country.

The revenue of the State during the year 1928-29 was Rs. 1,30,27,000 and the expenditure Rs. 1,03,92,000. The Jodhpur Railway extending from Hyderabad (Sind) to Luni Junction and Marwar Junction to Kuchaman Road with its branches on all sides in the territories of the State is the principal railway, while the B.B.A.C.I. Railway runs across a portion of the South Eastern Border. The famous marble quarries of Makrana as well as the salt lake at Sambhar are situated in Jodhpur territory.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and are the direct descendants of Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844 after the British conquest of Sind the forts of Shahgarh, Garsia and Ghotaru which had formerly belonged to Jaisalmer were restored to the State. The present Ruling Prince is His Highness Maharajadhiraja Maharaj Shri Sir Jawahar Singhji Bahadur, K.C.S.I. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu 5,630 feet. The Chiefs of Sirohi are Deora Rajputs a branch of the famous Chohan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharajadhiraj Maharao Shri Sir Sarup Ram Singh Bahadur, K.C.S.I. The State is ruled by the Maharao with the assistance of Ministers and other officials. Revenue about 10½ lakhs.

Jaipur is the fourth largest State in Rajputana. It consists for the most part of level and open country. It was known to the ancients as Matsya Desh and was the kingdom of the King Virata mentioned in the Mahabharata. In whose court, the five Pandava brothers during their last period of exile resided. Bhairat in the Jaipur State has been identified.

The Maharaja of Jaipur is the head of the Kuchawa clan of Rajputs which claims descent from Kush son of Rama, King of Ayodhya, the famous hero of the famous epic poem, the Ramayana. This dynasty in Eastern Rajputana dates as far back as ninth century A.D. Dulha Rai, one of its most early rulers, made Amber the capital of the State in 1037 A.D. About the end of 12th century one of the rulers of the army of Prithvi Raj, Emperor of Delhi defeated Shihabuddin Ghori in the Khyber Pass and pursued him as far as Ghazni. Prithvi Raj had given his sister in marriage to him. History of India records several distinguished rulers of Jaipur from amongst whom the following require particular mention Man Singh 1506-1515. He was a victorious general, intrepid commander and

tautful administrator, whose fame had spread throughout the country. During most troublous times, he maintained imperial authority in Kabul and was the brilliant character of Akbar's time. Maharaja Sawai Jai Singh II (1700—44) was the first town planner in India. He removed the capital of the State to Jaipur and named it after him. During his time the State acquired great power and fame. He was a great mathematician and scientist of his age, and is famous for his astronomical observations which he built at several important centres in India. His court was visited by foreign astronomers. Maharaja Sawai Ram Singh 1835-1880. He was one of the most enlightened princes in India at that time. He encouraged art and learning. He embellished the city in various ways and improved the administration and material condition of the people. Maharaja Sawai Madho Singh II, 1880-1922. He was a very wise and intelligent ruler who followed in the foot-steps of his father. He maintained and steadily improved all the useful measures initiated by the late Maharaja. His administration was characterized by great liberality, catholicity and a broad outlook on affairs. His deep religious devotion and piety and unrivalled generosity and genuine and active sympathy are well known. His staunch loyalty and maintenance of the traditions of his house raised him in the estimation of the paramount power. He passed away after a long reign of 41 years. His late Highness' donations and subscriptions to works of charity are enormous and too numerous to detail. His Highness the present Maharaja Sawai Man Singh II Bahadur was born on 21st August 1911. He was adopted by His late Highness on 24th March 1921. He is a scion of the Rajawat House of Isarda, and ascended the gadi on the 7th September 1922, and was married to the sister of the present Maharajah of Jodhpur on the 30th January 1924. He studied at the Woolwich Military Academy in England and promises to be an ideal ruler having given abundant evidence already of his keen and sympathetic interest he takes in all that concerns the welfare of his people and mankind in general.

During the minority of the present Ruling Prince, the administration is carried on by a Council of State. A Chief Court of Judicature was established in 1924. The army consists of Cavalry, Infantry, Transport and Artillery. The normal revenue is about one crore and twenty five lakhs and expenditure about one crore and twenty lakhs. According to the Census of 1921, the population of the State is 23,88,802. In area, it is 12,632 sq. miles.

Kishangarh State is in the centre of Rajasthan and consists practically of two narrow strips of land separated from each other with an area of 358 square miles (population 90,000) the northern mostly sandy, the southern generally flat and fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputs and are descended from Maharaja Kishan Singh (second son of Maharaja Udai Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is His Highness Umdas Rajpal Bundel Maharajah Dhiraj Dikshit Yag

narain Singh Bahadur. He was born on the 26th January, 1886, and was educated at the Mayo College, Ameer, where he passed the Diploma Examination. He was married to the sister of Raja Bahadur Mahendrasagar in May, 1915. He went to England and travelled on the Continent with His Late Highness in 1921. On the demise of His Late Highness on 25th September 1926, he succeeded to the Gadi on the 24th November, 1926. He administers the State with the help of a Council. Revenue about 9 lakhs and expenditure 8 lakhs.

Lawa State or Chief of Rajputana is a separate chieftainship under the protection of the British Government and independent of any Native State. It formerly belonged to Jaipur and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers and Lawa was then raised to its present State. The Thakurs of Lawa belonged to the Naruka sect of the Kachwaha Rajputs. The present Thakur Hansperdeep Singh was born on September 24 1923 and succeeded to the estate on 31st December 1929. The estate is under minority Administration. Revenue about Rs. 50 000.

Bundi State is a mountainous territory in the south east of Rajasthan. The Ruler of Bundi is the head of the Hara sect of the great clan of Chauhan Rajputs and the country occupied by this sect has for the last five or six centuries been known as Haroti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindaries and came under British protection in 1815 at which time it was paying tribute to Holkar. The present ruler of the State is His Highness Maharaja Raja Shri Jahwar Singhji Sahab Bahadur. He was born on 8th March 1898 and succeeded to the Gadi on 8th August 1927. His Highness is entitled to a Salute of 17 guns. Revenue about 12 lakhs. Expenditure nearly the same.

Tonk State—Partly in Rajasthan and partly in Central India, consists of six Parganas separated from one another. The ruling family belongs to the Salarsai Clan of the Gunawal Afghan tribe. The founder of the State was Nawab Muhammad Amir Khan Bahadur, General of Holkar's Army from 1798-1806. Holkar bestowed grants of land on him in Rajasthan and Central India and the land so granted him was consolidated into the present State. The present Ruler of the State is His Highness Nawab Hafiz Muhammad Saadat Ali Khan Bahadur who ascended the Maqad in 1930. The administration is conducted by the Nawab in consultation with the Council of four members viz:—(1) Shri Cecil Kave, Kt. C.M.I. (I.E. C.B.E. Revenue Member and Vice President. (2) B. T. D. Ferguson Judicial Member. (3) Khan Bahadur Sahibzada Muhammad Ishaque Khan Financial Member and (4) Sahibzada Muhammad Abdus Fawwab Khan Home Member.

Secretary—Malik Muhammad Din.

Kotah State belongs to the Hara section of the clan of Chauhan Rajputs and the early history of this house is up to the 17th century identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is H. H. Lieut Colonel Maharao Sir Umed Singh Bahadur, GCSI, GCMG, GSR, who was born in 1873 and invested with full powers in 1896. In administration he is assisted by two members Rai Bahadur Pandit Bishwanath Nath, M.A., and Major-General Oankar Singh, CIE. The most important event of his reign has been the restoration on the deposition of the late Chief of the Jhalawar State of 15 out of the 17 districts which had been ceded in 1838 to form that principality. Revenues 53 lakhs. Expenditure 48 lakhs.

Jhalawar State consists of two separate tracts in the south-east of Rajputana with an area of 810 square miles yielding a revenue of about 8 lakhs of rupees. The ruling family belongs to the Thala clan of Rajputs. The present Ruler His Highness Maharaj Ranu Rajendra Singhji succeeded to the Gadi on 13th April 1929. He was born in 1900 and educated at the Mayo College, Agra and Oxford University. The new appointed Maharaj Kumar Vinodra Singh was born in England on 27th September 1921.

The Bikaner State in point of area is the seventh largest of all the Indian States and the second largest in Rajputana. The population of the State is 659,680 of whom 84 per cent are Hindus, 11 per cent Mohammedans and 1.5 per cent Jains. The Capital City of Bikaner, with its population including the suburbs of 69,410, is the 3rd city in Rajputana.

The northern portion of the State consists of level loam land, whilst the remainder is for the most part sandy and undulating. The average rainfall is about 12 inches. The water level over most of the State is from 150 feet to 300 feet deep.

The Ruling Family of Bikaner is of the B. H. clan of Rajput, and the State was founded in 1465 A.D. by Rao Bikan, son of Rao Jodha, Ruler of Marwar (Jodhpur) and after him both the Capital and the State are named after him. The first to receive the title of Rajah was one of Akbar's most distinguished Generals and it was during his reign that the present fort of Bikaner was built in 1593. The title of Maharajah was conferred on Rajah Anup Singhji by the Mughal Emperor in 1687 in recognition of his distinguished services in the capture of Goleonda. The conspicuous services of Maharajah Sardar Singhji who in the Jodha Mutiny of 1857 personally led his troops to cooperate with the British forces in the field on the outbreak of the Mutiny was acknowledged by the Government of India by the transfer of the Sub Tehsil of Talai, consisting of 41 villages from the adjoining Sirsa Tehsil in the Punjab to the Bikaner State.

The present Ruler, Lieutenant General His Highness Maharajadhiraj Raj Rajodhwar Narendra Shriromani Maharaja Sri Sir Ganga Singhji Bahadur, GCSI, GCMG, GSOVO, GBE, KCB, ADC, ICD, is the 21st of a long line of distinguished rulers renowned for their bravery and statesmanship. He was born on the 3rd October 1880 and assumed full ruling powers in December, 1898. He was awarded the first class Maharaja Hind Medal for the active part he took in relieving the famine of 1899-1900 and soon after he went on active service to China in connection with the China War of 1900-1901 in command of his famous Ganga Risala and was mentioned in despatches and received the China Medal and a CIE. The State forces consist of the Camel Corps known as Ganga Risala, whose mentioned strength is 468 strong, an Infantry Battalion 619 strong, a Regiment of Cavalry, 342 strong including Body Guard, a Battery of Artillery (4 guns) and 235 strong and Camel Battery 30. At the outbreak of the Great War in 1914, His Highness immediately placed the services of himself and his State forces and all the resources of the State at the disposal of His Imperial Majesty the King Emperor and the Ganga Risala reinforced by the Infantry Regiment, which became incorporated in the Camel Corps in the field, rendered very valuable services in Egypt and Palestine. An extra force was also raised for internal security. His Highness personally went on active service in August 1914 and enjoyed the honour of having fought both in France and Egypt, and thus has the distinction of having fought for the British Crown on three continents, viz. Asia, Europe and Africa. He was mentioned in despatches both in Egypt and France. His Highness also played a very conspicuous political part during the period of the War when he went twice to Europe as the Representative of the Princes of India, once in 1917 to attend the meetings of the Imperial War Cabinet and Conference, and again in 1918-19 to attend the Peace Conference where he was one of the signatories to the treaty of Versailles.

His Highness enjoys a salute of 19 guns (personal) whilst the permanent local salute of the State is also 19. His Highness has also had the honour of being elected the first Chancellor of the Chamber of Princes, an office which he filled most creditably for 5 years till 1925.

His Highness is assisted in the administration of the State by a Prime Minister and Chief Councillor in the person of Sir Manubhai N. Wadia, B.A., GSI, M.A., LL.B., formerly the Dewan of the Baroda State. A Legislative Assembly was inaugurated in 1913, and consists of 45 Members 18 out of whom are elected Members, and which meet twice a year.

The revenues of the State are over a crore of rupees and the State owns a large Rail way system, the total mileage being 750.00. Several projects for its extension are under contemplation, including the new scheme of rail way line connecting Delhi with Sindh and running through the Bikaner and Jaisalmer States. Hitherto there was practically no irrigation in the State, the crops depending only on the scanty rainfall, but the Gang Canal taken out

from the Betlej river has now been constructed and opened and will help to protect about 60,000 acres of land in the northern part of the State against famine from which it has suffered in the past 1,500. Squares of the Canal land have already been sold. Even larger expectations are laid out from the Bhakar Dam Project from which it is hoped that the remaining level lands in the north of the State will be irrigated. A coal mine is worked at Palans, 14 miles south from the Capital.

Alwar State is a hilly tract of land in the East of Rajputana. Its Rulers belong to the Lalawat Karnika branch of Kachharias, Solar Dynasty. This ruling family is descended from Raja Udal Karanjil, who was the common ancestor of both Alwar and Jaipur. The State was founded by Pratab Singh, who before his death in 1791 had secured possession of large territories. His successor sent a force to co-operate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year. Disputes about successions mark the history of the State during the earlier part of the nineteenth century. The present chief, H. H. Raj Rishi Veerendra Shikromaji Dev Col. Shri Sewa Maharaja Sir Jey Singhji Bahadur, C.I.F. & C.S.I., who was born in 1882 succeeded his father in 1892 and was invested with powers in 1903. He carries on the administration with the assistance of five Ministers, Members

of His Highness's Council and various heads of departments. The normal revenue and expenditure are about Rs. 55 lakhs a year. The State besides maintaining other forces, maintains also the Imperial Service Troops which His Highness the late Maharaja was the first prince in Rajputana to offer (in 1888) in the defence of the Empire. Alwar stood first in recruiting in Rajputana at the time of the Great War and enjoys a salute of 17 guns. The capital is Alwar on the Rajputana Malwa Railway 98 miles west of Delhi.

CENTRAL INDIA AGENCY

Central India Agency is the name given to the country occupied by the Indian States grouped together under the supervision of the Political Officer who is designated the Agent to the Governor-General in Central India with headquarters at Indore. As constituted in 1921—that is, after the separation of the Gwalior Residency—it is an irregularly formed tract lying in two sections, the Eastern comprising Bundelkhand and Baghelkhand Agencies between 23°-35' and 26°-19' North and 78°-10' and 83°-0' East and the Western consisting of the Bhopal and the Southern States and Malwa Agencies between 21°-22' and 24°-47' North and 74°-0' and 78°-50' East. The British districts of Jhansi and Sangor and the Gwalior State divide the Agency into two sections. The total area covered is 51,501.3 square miles and the population (1921) amounts to 59,97,023. The great majority of the people are Hindus. There are 28 Salute States of which the following 10 have direct treaty engagements with the British Government—Indore, Bhopal, Rewa, Orchha, Datia, Dhar, Dewas Senior Branch, Dewas Junior Branch, Samthar and Jaora. All of these are Hindu except Bhopal, Jaora and Rewa which are Muhammadan. Besides these there are 56 Minor States and Guaranteed Estates. Excluding the Indore State and the Jaipur and Lalgarh Estates, they are divided into following groups for administrative purposes—Bhopal Agency, 8 States and Estates (principal State Bhopal); Baghelkhand Agency, 12 States and Estates (principal State Rewa); Bundelkhand Agency, 22 States and Estates (principal State Orchha); Southern States and Malwa Agency, 22 States and Estates (principal States Dhar, Dewas Senior Branch, Dewas Junior Branch, Jaora and Ratlam).

The Agency may roughly be divided into two natural divisions, Central India West comprising the former Plateau division with much hilly land as lies on this side and Central India East comprising the former low lying area and the Eastern hilly tracts. The hilly tracts lie along the ranges of the Vindhya and Satpura. They consist of forest areas and agriculture is little practised there, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled and their political relations with the Government of India and each other are very varied.

The following is the area, population and revenue of the ten treaty States mentioned above—

Name	Area in square miles	Population	Revenue Lakhs Rs.
Indore	9,519	11,51,598	186
Bhopal	9,902	6,92,445	62
Rewa	13,000	14,01,524	60
Orchha	2,079	2,84,945	11
Datia	911	1,48,669	17
Dhar	1,777	2,30,388	17
Dewas Senior Branch	449	77,005	9
Dewas Junior Branch	419	66,998	6
Samthar	180	33,214	3
Jaora	601	85,778	12

Gwalior.—The house of Solanki traces its descent to a family of which one branch held the hereditary post of *petel* in a village near Satara.

the head of the family received a patent of rank from Aurangzeb. The founder of the Gwalior House was Ranoji Scindia who held a military rank under the Peshwa Bajirao in 1726 the Peshwa granted lands to Fuar, Holkar and Scindia empowering them to levy Chukra and Sariengukhi and retain half the amount for payment to their troops. In 1746 Ranaji Scindia accompanied Bajirao to Delhi where he and Malhar Rao Holkar distinguished themselves in military exploits. Ranaji fixed his headquarters at the ancient city of Ujjain which for the time became the Capital of the Scindia dominions. During the time of Mahadji Scindia and Daulat Rao Scindia Gwalior played an important part in shaping the history of India. Despite the partial reverse which Mahadji Scindia's troops suffered at the hands of the British in 1780, reverses which led to the treaty of Salbai (1782) Scindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa.

In 1780 his power was firmly established in the State. While he was indulging ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February 1794. Himself a military genius Mahadji Scindia's arms reached the zenith of their glory under the disciplined training of the celebrated French adventurer—De Bogue. Mahadji was succeeded by his grand nephew Daulat Rao in whose service Perron a Military Commander of great renown played a leading part. The strength of Scindia's Army was however considerably weakened by the reverses sustained at Ahmednagar, Assaye, Assagarh and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigue and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Malharpore and Panhar.

Jankoji Rao was succeeded by Jaji Rao whose adherence to the British cause during the dark days of Mutiny when his own troops deserted him, was unshakable. In 1861 he was created a Knight Grand Commander of the Most Excellent Order of the Star of India and in 1877 was made a Councillor of the Empress. Subsequently he received other titles and entered into a series of mutual exchanges of territories with the British Government. He died on the 26th June 1886 and was succeeded by his son Lieutenant General H. H. Maharaja Sir Madho Rao Scindia Alijah Bahadur, CVO, CSI, KCB, ADC to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war he held the rank of honorary Lieutenant General of the British Army and the honorary degree of LL.D., Cambridge and D.C.L. Oxon. He was also a Donor of the Order of St John of Jerusalem in England. He died in June 1925 and was succeeded by his son H. H. Jorwaraj Rao Scindia in September 1925 during whose minority the administration of the State will be carried on by a Council of Regency.

The ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India.

The northern part of the State is traversed by the G.I.P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Etihad, from Gwalior to Khajur and from Gwalior to Shivpuri. The main industries are cotton spinning, which is done all over the State, shoe making made at Chanderi, leather work etc. The State maintains three regiments of Imperial Service Cavalry two battalions of Imperial Service Infantry and a transport corps. Lashkar the capital city is two miles to the south of the ancient city and the fort of Gwalior. Annual income about 2 crores and expenditure about 175 lakhs.

Indore—The founder of the House of the Holkar of Indore was Malhar Rao Holkar, born in 1703. His soldierly qualities brought him to the front under the Peshwa who took him into his service and employed him for his conquests. When the Maratha power was weakened at the battle of Panipat in 1761 Malhar Rao had acquired territories stretching from the Deccan to the Ganges as a reward for his career as a Military Commander. He was succeeded by his grandson. On his death without issue his mother Ahilya Bai became the ruler and her administration is still looked upon with admiration and reverence as that of a model ruler. She was succeeded by Tukoji Holkar who indeed had been associated with her to carry the Military Administration and hid in course of it distinguished himself in various battles. Tukoji was succeeded by Kashirao who was supplanted by Jivant Rao his step brother a person of remarkable daring strategy was exhibited in a number of engagements in which he had taken part. The brilliant success he obtained at the battle of Pona against the combined armies of Peshwa and Bhatia with him a dictator of Prerna for some time and he desired in consequence the independence of Holkar State. During 1804-5 he had a protracted war with the British closed by a Treaty which recognized the independence of Holkar State with practically no diminution of its territories and rights. Jivant Rao showed signs of insubordination from 1806 onwards and succumbed to that malady in 1811 when he was succeeded by his minor son Malhar Rao II. During the Regency which followed the power of the State was weakened by various causes the most important of which was the refractory conduct of the Military Commanders. On the outbreak of the war between the English and the Peshwa in 1817 some of these Commanders, with a part of the army rebelled against the authority of the State and were disposed to defend the Peshwa while the regent mother and her ministers were for friendship with the British. There was a battle between the British Army and this refractory portion of the Holkar Army which culminated in the latter's defeat. Holkar had to come to terms and to cede extensive territories and rights over the Rajput Princes to the British but the internal sovereignty remained unaffected. The Treaty of 1818 which embodied these provisions still regulates the relations between the British Government and the State.

Malhar Rao died a premature death in 1833. There followed the weak administration of Har-

Rao and his son. In 1844 Tukoji Rao II ascended the Throne but as he was a minor the administration was carried on by a Regency which was fortunate in having Sir Robert Hamilton, the Resident as its Adviser. The prosperity of the State revived a great deal during this administration and the progress was maintained after the Maharaja assumed powers in 1852. It was interrupted by the outbreak of Mutiny in 1857 in British India. This wave of disaffection did not leave some of the State troops untouched. The Maharaja with this adherents and the remaining troops remained however staunch to the British and gave every possible assistance to the British authorities at Indore and other places which was recognised by the British Government. The Maharaja died in 1888 after having effected various reforms in the administration and raised the position of the State to a high degree of prosperity and honour. He was succeeded by Shivaji Rao who reigned for 16 years and will be specially remembered for his beneficent measures in matters of education, sanitation, medical relief and abolition of transit duties. Tukoji Rao III succeeded in 1903 while yet a minor. The Regency Administration was continued till 1911 and it effected a number of reforms in all the branches of administration. The policy of the Regency was maintained by the Maharaja. With his assumption of powers the State advanced in education in general including female education, commerce and industrial development, municipal franchise and other representative institutions. This prosperity was specially reflected in the Indore City, the population of which rose by 40 per cent.

During the war of 1914 the State placed all its resources at the disposal of the British Government. Its troops took part in the various theatres of war and the contribution of the State towards the war and charitable funds in money was 41 lakhs and its subscriptions to the War Loans amounted to Rs. 82 lakhs while the contribution from the Indore people amounted to over one crore. This assistance received the recognition of the British Government.

The area of the State is 9,520 square miles with a revenue of about one crore and thirty eight lakhs.

The State now possesses one first grade College teaching up to M. A. and LL.B. 5 High Schools, 1 Sanskrit College and 645 other educational and 78 medical institutions. An Institute of Plant Industry for the improvement of cotton is located at Indore. It has also 9 spinning and weaving mills.

The State Army consists of about over 4,200 Officers and men. The State is traversed by the Holkar State Railway, the principal station of which is Indore. The B & C P Railway and the U B Section of the G & P Railway. Besides the trunk roads there are 600 miles of roads constructed and maintained by the State. The reforms introduced were the establishment of State Savings Banks, a scheme of Life Insurance for State officials, establishment of a Legislative Committee consisting

of seven elected Members out of a total of nine. Members introduction of a Scheme of Compulsory Primary Education in the City of Indore and measures for expansion of education in the rural areas.

His Highness Maharaja Tukoji Rao III abdicated in favour of his son. The present Maharaja, Chhatrapati Rao Holkar was born on 6th September 1906. He received his education in London from 1920-23 and has again proceeded to Oxford for higher education. He married a daughter of the Junior Chief of Kargil (Kohliapur) in February 1924. His educational career at Oxford in England having come to an end he returned to India arriving at Indore on the 12th November 1929 and received administrative training with Mr C. I. Williams C.B. He assumed full Ruling Powers on the 9th May 1930.

The chief imports are cloth, machinery, sugar salt and kerosene oil. The total imports in 1929 amounted to Rs. 2,38,85,476.

The chief exports are cotton cloth, tobacco and rice. The total exports in 1929 amounted to Rs. 1,03,86,631 (exclusive of the export of produce of the spinning and Pressing Mills) which was valued at Rs. 3,06,47,692. Cloth manufactured at the local mills is valued at Rs. 2 two crores and the local trade in which is limited to one crore. Cotton yarn duty at 34 per cent ad valorem has been abolished from 1st May 1926 and an industrial tax is levied on the cotton mills from the same date.

Bhopal—The principal Mohammedan State in Central India ranks next in importance to Hyderabad among the Mohammedan States of India. The ruling family was founded by Sardar Dost Mohammad Khan Durrani, a Pathan who after having served with distinction in the Army of the Emperor Aurangzeb, obtained the grant of Bhopal in 1709. With the disintegration of the Mughal Empire Bhopal State developed into an independent unit. In the early part of the 18th century the Nawab successfully withstood the invasions of the British and Bhopal and by the act of 1811 Bhopal and took to assist the British with a contingent of horse and to co-operate against the Marathi bands.

The present ruler of the State His Highness Sikandar Sulat Nawab Bahadur Yashwantrao Maharaj, succeeded his mother Her Highness Nawab Sultan Jahani Begam on her abdication in May 1926. Having ably conducted the administration of the State for nearly ten years as Chief Secretary and after working as Member for Finance and Law and Justice Departments His Highness is personally conversant with each and every detail of the administration.

Prime Minister—Raj Bahadur B. V. Nupoo, B.A., LL.B., C.I.F.

His Highness is the head of the Government and is assisted by an Executive Council consisting of five Members and one Secretary, none of whom are given below.

Ali Marfat Ali, Sir Oswald Vernon Bonquet, K.C.S.I., C.I.E., F.R.S., President of the State Council and Member, Revenue Department.

Ab Maratani Rai Bahadur, Raja Oudh
Minister for Finance
and Justice and Public Works Department

Ab Maratani, Nasrud Mulk Moulvi Syed
Ali, M.A., L.B., Member, Bokhara
Ali

Ab Maratani Rafiq Qadi Faizul Uddin Moulvi
Mohammad Anwarul Haq M.A., M.L.A. Minister
in charge of Public Health and Education
Department

Ab Maratani Major H. De N. T. N. Member
in charge of the Army Department

Secretary, Mr. Dhar, Dulari Raha Ali
Wali Mohammad

The Political Department is under His
Highness direct control the Ministry in charge
of the Department being Ali Qadi Kazi Ali
Husain Ali

The work of legislation with the power of
drawing the budget moving resolutions and
asking questions is entrusted to a representative
legislative Council inaugurated in 1927.
The Ryotwari System in which every tenant
holds his land direct from Government has
lately been introduced. The State is rich
in minerals and valuable and the soil
is fertile which comprises more than two-thirds
of the total consists mostly of rich black cotton
soil producing cotton, wheat, sugar cane,
tobacco and other crops. The State contains
many remains of great archaeological interest
including the famous Bhauji Topes which date
from the end of the 1st century B.C.

Along with other troops, the State maintains
one full strength Infantry Battalion. The
capital, Bhopal City situated on the Northern
bank of an extensive lake is the junction for
the Royal Trunk section of the Great Indian
Peninsular Railway.

Bewa—This state lies in the Bagholband
Agency and falls into two natural divisions separated
by the scarp of the Kaimur range. The
area is 13,000 sq. miles with a population of
14 lakhs. Its Chiefs are Baghel Rajputs descended
from the Solanki clan which ruled over
Gujarat from the tenth to the thirteenth century.
In 1812, a body of Pindaries raided
Narasapur from Bewa territory and the Prince,
who had previously rejected overtures for an
alliance, was called upon to accede to a treaty
acknowledging the protection of the British
Government. During the Mutiny, Bewa
offered troops to the British, and for his services
these various parganas, which had been seized
by the Marathas, were restored to the Bewa
Chief. The present chief is H. H. Bandhawesh
Maharaja Sir Gulab Singhji Bahadur, K.C.S.I.,
who was born in 1908. He was married in 1919
to the sister of His Highness the Maharaja of
Jodhpur. Upon the death of his father
(of H. H. Maharaja Sir Venkat Ramji
Singh Bahadur, on 30th October, 1918, H. H.
Bandhawesh Maharaja Gulab Singh Bahadur
succeeded to the gadi on 31st October
as a minor. During the period of minority the
State was administered by a Council of Regency
with H. H. Maharaja Sir Rajan Singh Bahadur
Colonel, K.C.S.I., K.C.V.O., A.D.C., of Bikaner as

Regent. H. H. Bandhawesh Maharaja Gulab
Singh Bahadur attained majority in 1922
and was invested with full ruling power
on 31st October 1922, by H. H. the
Viceroy and the administration of the
State is now carried on by him with the
aid of four Commissioners. His Highness has
got a son and heir named Maharaja Kumar
Marand Singhji born on 18th March 1928.

His Highness second marriage with the
daughter of H. H. Maharaja of Kishengarh was
performed on the 18th February 1925.

Dhar—This State, under the Agency for
Southern States in Central India, takes its name
from the old city of Dhar, long famous as the
capital of the Panwara Rajputs, who ruled
over Malwa from ninth to the thirteenth
century and from whom the present chiefs of
Dhar—Lower Marathas—claim descent.
In the middle of the 18th century the
Chief of Dhar, Anand Rao was one of the
leading chiefs of Central India sharing with
Holkar and Scindia the rule of Malwa. The
State came into treaty relations with the British
Government in virtue of the treaty of 1819.
Lt. Colonel H. H. the Maharaja Sir Udayi Rao
Puar Sahib Bahadur, K.C.S.I., K.C.V.O., K.C.M.,
died on 30th July 1926 and the government of
the State is carried on by a Council with H. H.
the Maharaja Sahib as President. There are 11
feudatories and 9 Bhumas of whom 13 hold a
guarantee from the British Government. The
average expenditure is about 15 lakhs. Rao
Bahadur K. Nankar is Dewan of the State
and Vao Prasad of the Council. The present
Ruler His Highness Maharaja Anand Rao Puar
Sahib Bahadur is a minor.

Jaora State—This State is in the Malwa
Political Agency covering an area of about
601 square miles with a total population of
85,817, and has its headquarters at Jaora
town. The Chiefs of Jaora claim descent
from Abdul Majid Khan, an Afghan of the
Ispak Khel, from Swat, who came to India
to acquire wealth. The first Nawab was
Ghafoori Khan who obtained the State about
the year 1808. The present Chief is Lt.-Col. His
Highness Ikhraun Daulah Nawab Sir Mohammad
Iftikhar Ali Khan Sahib Bahadur Saadat-e-Jang
K.C.I.E., who was born in 1883. His Highness
is an Honorary Lieutenant Colonel in the Indian
Army.

In the administration of the State His Highness
is assisted by a Council constituted as under—
President—His Highness The Nawab Sahib
Vice President—Khan Bahadur Sahibzada
Mohammad Sirras Ali Khan, Chief Secretary
Members—(1) Khan Bahadur Sahibzada
Mohammad Sher Ali Khan, Military Secretary,
(2) Sahibzada Mohammad Saifur Ali Khan,
Private Secretary, (3) Munshi Ram Dayal,
Financial Secretary, (4) Munshi Gulam Ali,
Senior Member, Revenue Board.

A Chief Court with a Chief Justice and two
Puisne Judges and a Revenue Board with two
members have also been established.

The soil of the State is among the richest
in Malwa, being mainly of the best black variety
bearing excellent crops of wheat, cotton and
poppy. The average annual revenue is
Rs. 11,67,000.

Rutlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles including that of the Jagir of Khara in the Kuchalgari Chiefship, which pays an annual tribute to the Rutlam Darbar. The State was founded by Raja Ratan Singhji, a great grandson of Raja Udal Singh of Jodhpur, in 1632. The Ruler of Rutlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal powers. The present Ruler of Rutlam is Colonel His Highness Maharaja Sir Rajan Singh, C.O.S.I., K.C.V.O., A.D.G., to H. R. H. the Prince of Wales, who was born in 1880, educated at Daly College, Indore, received military training in Imperial Cadet Corps and invested with full powers in 1908. His Highness served in the war in France and Egypt from 1915 to 1918. He was mentioned in despatches and received the Ciorix d'Officiers de Legion d'Honneur Salute 13 guns local 15 guns.

Deputy—Raj Kumar Sirdar Singh of Shahpura.

Datia State—The rulers of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha house. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1826, this was extended by conquest and by grants from the Delhi emperors. The present Ruler Major His Highness Mahesha Lokendra Sir Govind Singh Ja Deo Bahadur, K.C.S.I., 1918 who was born in 1886 and succeeded in 1907 married 1902 enjoys a salute of 15 guns. He placed all his resources and his personal services at the disposal of the Imperial Government during the Great War and established a War Hospital at Datia. He is a progressive ruler and has created a Legislative Council and introduced many useful and important reforms in his State. He is a Vice-President of St. John Ambulance Association, a patron of Red Cross Society and has recently offered to the Imperial City of Delhi the life size marble statue of Lord Reading, the late Viceroy. His Highness is a famous big game shot and has shot more than 120 tigers. The late Apparent Raja Bahadur Balbhair Singh born 1907, has married a daughter of the Maharaja Bahadur of Bikaner and is a very promising prince. His Highness has got a second son and a grandson.

Orchha State—The rulers of this State are Bundela Rajputs claiming to be descendants of the Gahawars of Benares. It was founded as an independent State in 1048 A.D. It entered into relations with the British by the treaty made in 1812. His Highness Sir Pratap Singh, C.O.S.I. & C.I.E. died in March 1930 and has been succeeded by his grandson His Highness Sawai Mahendra Maharaja Vir Singh Deo Bahadur the present ruler. The ruler of the State has the hereditary titles of His Highness Sarma and Maharaja Bundelkhand Maharaja Mahendra Sawai Bahadur. The State has a population of about 284,948 and an area of 2,080 square miles. The capital is Tikamgarh, 80 miles from Lucknow Station, on the G. I. P. Railway. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Maharaja Sir Singh Deo, the most famous ruler of the State (1744-1827).

Sikkim

Sikkim is bounded on the north and north-east by Tibet on the south-east by Bhutan, on the south by the British district of Darjeeling and on the west by Nepal. The population consists of Bhutias Lepchas and Nepaleses. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges which run southwards from the main chain separate Sikkim from Nepal on the west and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kanchenjunga (28,148 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Doochya La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurikhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1866. The State is thinly populated, the area being 2,818 square miles and the population 81,721 chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharaja Sir Tashi Namgyal, C.O.S.I. was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.E. was conferred upon the Maharaja on the 1st January 1918 and K.O.S.I. on 1st January 1923. The average revenue is Rs. 6,73,976.

Political Officer in Sikkim—Lt.-Col J. L. H. Weir.

Bhutan.

Bhutan extends for a distance of approximately 180 miles east and west along the southern slopes of the central axis of the Himalayas adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tsepa but was wrested from them by some Tibetan soldiers about the middle of the seventh century. British relations with Bhutan commenced in 1773 when the Bhutias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanes into Assam, an envoy (the Hon A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910 by which the Bhutanes Government bound itself to be guided by the advice of the British Government in regard to its external relations while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904 the Bhutias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Chumbi but their ruler, the Tenzig Penlop, accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made K.C.I.E. and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H.H. the Maharaja of Bhutan, Sir Ugen Wangchuk K.C.I.E., K.C.I.E. At the head of the Bhutan Government there are nominally two supreme authorities, the Dharma Raja known as Shabdrig Rinpoche, the spiritual head, and the Deb or Depa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse and his reincarnation then takes place always in the Choje, or royal family of Bhutan.

Cultivation is backward and the chief crop is maize. The military force consists of local levies under the control of the different chiefs. There are no military values.

Nepal.

The kingdom of Nepal is a narrow tract of country extending for about 580 miles along the southern slope of the central axis of the Himalayas. It has an area of about 68,000 square miles, with a population of about 5,580,000 chiefly Hindus. The greater part of the country is mountainous, the lower slopes being culti-

vated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhadgaon and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family Maharaja Jung Bahadur Rana, obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal and the right is still enjoyed by the descendants of the Rana family. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chieftain to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to keep a Resident at Lhasa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained. During the rule of the late Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr. Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war. In recognition of this help Nepal receives an annual gift of Rupees ten lakhs from the British Government to be paid in perpetuity. To further strengthen and cement the bonds of friendship that have subsisted so long between the two countries a new Treaty of friendship was concluded between the Governments of Nepal and Great Britain on the 21st December 1923.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign, or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present King, His Majesty Maharajadhiraja Tribhuvana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung Deva, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power couples with his

official rank the exalted title of Maharaja. Next to him comes the Commander in Chief, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Bhim, Shum Shere Jung Bahadur Rana KCSI, KCO, Honorary Major General, British Army, and Hon Colonel 4th Gurkhas, who succeeded the late Maharaja Chandra Shum Shere Jung Bahadur Rana as Prime Minister and Supreme Commander in Chief in November 1920. A man of proved ability as the Commander in Chief of Nepal, he has already inaugurated several important works of public utility. With consummate skill and political acumen he averted a breach of relations with Tibet and in his public utterances has expressed an earnest desire to uphold and maintain the traditional friendship with the British Government.

Rice, wheat and maize form the chief crops in the lowlands. Mineral wealth is supposed to be great, but, like other sources of revenue has not been developed. Communications in the State

are primitive, but since 1920 the Government has already undertaken the construction of a good and permanent road for vehicular traffic from Amlekhgunj to Bhimphedi—the base of a steep ridge in the main route to the capital of the country from British India—and also has installed a ropeway to connect this base with the capital proper covering a distance of 14 miles. A light railway from Amlekhgunj covering a distance of 25 miles in the route and connecting with the B & N W Ry at Raxaul also has been constructed and opened for traffic since March 1927. It has also put up a telephone over this route connecting the capital with the frontier township of Birgunje near Raxaul. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000 the highest posts in it being filled by relations of the minister. The State is of considerable archaeological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

British Envoy—Lieut Col C T Daukes, CIE

NORTH-WEST FRONTIER STATES.

The Indian States of the North West Frontier Provinces are Amb Chitral, Dir and Phulera. The total area is about 7,704 square miles and the population mainly Mahomedan, is 1,622,094. The average annual revenue of the first three is about Rs. 4,55,000, that of Phulera is unknown.

Amb.—Is only a village on the western bank of the Indus in Independent Tanawal.

Chitral.—Runs from Dir to the south of the Hindu-Kush range in the north, and has an area of about 4,600 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission and in 1889 on the establishment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amam-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1902 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government but he was mur-

dered in 1905. A war was declared by Umra Khan of Jandul and Dir against the Infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation was besieged with his escort and a force had to be despatched (April 1896) to their relief.

The three valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by His Highness Sir Shuja-ul-Mulk, KCSI, the Mehtar of Chitral and the foreign policy is regulated by the Political Agent at Malakand.

Dir.—The territories of this State, about 5,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur River. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans. Dir is mainly held by Yusufai Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Bashkar.

Political Agent for Dir, Swat and Chitral—J W Thomson CIE

STATES IN THE MADRAS PRESIDENCY.

The Madras Presidency includes 5 Indian States covering an area of 10,643 square miles. Of these, the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Toddiman Ranganapalle and Sandur two petty States of which the first is ruled by a Nawab, the second by a British district.

Name.	Area sq. miles.	Population.	Estimated Gross Revenue in lakhs of rupees.
Travancore	7,625	4,000,082	238.54
Cochin	1,617	979,019	78.50
Pudukottai	117	428,813	22.61
Ranganapalle	255	36,692	3.58
Sandur	167	11,884	1.42

These States were brought into direct relation with the Government of India on October 1st 1923.

Travancore.—This State, which has an area of 7,624.84 square miles and a population of 4,006,082 with a revenue of Rs. 248.05 lakhs occupies the south-west portion of the Indian Peninsula forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional, but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, included within its present boundaries, was consolidated

and brought under one rule, by the Maharaja Hariharada Varma (1728-38). The English first settled at Anjengo, a few miles to the north of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madras and Tanjore, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunch allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible invasions by Tippu, an arrangement was come to in 1788 with the East India Company, and in 1795 a formal treaty was concluded by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

H H the Maharaja (6 November 1912) succeeded the deceased in September 1914. During the minority the State is ruled by His Highness Maharaja Setu Lakshmi Bai, C.I., aunt of the Maharaja, as Regent on his behalf. The work of legislation is entrusted to a Council brought into existence in 1884 and as last reconstituted in 1921, has a majority of non-official elected members. The Council is invested with the powers of voting on the budget, moving resolutions and asking questions involving supplementary questions. Women are placed on a footing of complete equality with men in the matter of both franchise and membership. This is the largest measure of constitutional reform introduced in any Indian State. A representative assembly known as the Sri Mulam Popular Assembly meets once a year. Its members who are the elected representatives of the people are given an opportunity to express direct to the Dewan their wants and wishes and their views regarding the administrative measures adopted from time to time. Local Self Government on a small scale exists in the more important towns. The State supports a military force of 1,473 men. Education has advanced considerably in recent years and the State takes a leading place in that respect. In the matter of female education the State has a leading place among Indian States and the British Indian Provinces. The principal food-grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca nut, jack fruit, sugar cane and tobacco. Rubber and tea are among other important products. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads and with a natural system of back waters, besides canals and rivers navigable for country crafts. One line of railway about one hundred miles in length cuts across the State from east to west and then runs along the Coast to the Capital. More Railway lines are in contemplation. The capital is Trivandrum.

Agent to the Governor-General—A N J (Sri) CIX 109

Dewan—S Subrahmanya Aiyar, M.A., B.L.

Cochin.—This State on the south west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore.

Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the sixteenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut who was expelled with the assistance of the Raja of Travancore. In 1776 the State was conquered by Hyder Ali to whom it remained tributary and subordinate, and subsequently to his son Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Raja Sri Sri Rama Varmah, C.O.S.I., C.O.I.E. who was born in 1852 and who succeeded the deceased in 1895 having abdicated in December, 1914 His Highness Sri Sri Rama Varmah C.O.I.E. who was born on 6th October, 1858, succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Maharaja whose chief Minister and Executive Officer is the Dewan, Rao Bahadur T. S. Narayana Iyer, M.A., B.L. The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts and their products form the chief exports of the State. Communications by road and back waters are good, and the State owns a line of railway from Shoranur to Kanyakulam the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 32 officers and 837 men.

Agent to the Governor-General—A N J. Cater CIX, 116

Pudukkottai.—This State is bounded on the north and west by Trichinopoly, on the south by Ramnad and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madurai. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1762 the Tondaiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf the Company's sepoy commandant, in settling the Madurai and Tanjore.

countries. Subsequently he was of much service in the wars with Haidar Ali. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty of arrangement with the Raja. His Highness Sri Bahadur Das Raja Rajagopala Tondimad Bahadur, the present ruler, is a minor. He was installed as Raja on 10-11-28. The administration of the State is carried on by a Council of Administration. The various departments are constituted on the British India model. The principal food crop is rice. The forests, which cover about one-seventh of the State, contain only small timber. There are no large industries. The State is well provided with roads, but Pudukkottai is the only municipal town in the State.

Agent to the Governor-General—A. N. L. Cater, Esq. C.I.E., I.C.S.

Assistant Agent to the Governor-General—vacant.

Bangalore—This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Fasih Ali Khan Bahadur. The chief food-grain is cholam. The Nawab pays no tribute and maintains no military force. The revenue of the State is over 4 lakhs. The Nawab enjoys a salute of 9 guns.

Agent to the Governor-General—A. N. L. Cater, Esq. C.I.E., I.C.S.

Assistant Agent to the Governor-General—vacant.

STATES OF WESTERN INDIA

Owing to the large number of States concerned and the interlacing of their territories with neighbouring British districts, the transfer of States under the Bombay Government to direct political relations with the Government of India (which was advocated in the Montagu Chelmsford Report on the Constitutional Reforms) had been delayed. The first stage of that process, however, was carried out in October, 1924, when a new Residency was created in direct relation with the Government of India, comprising the whole of the compact area making up the Kathiawar, Cutch and Palanpur Agencies under the Government of Bombay.

Resident of the First Class and Agent to the Governor-General in the States of Western India—The Hon. Mr. E. H. Aclay, C.I.E., I.O.S.

Judicial Commissioner in the States of Western India—G. O. Shannon, Esq., I.O.S.

Kathiawar—Kathiawar is the peninsula lying immediately to the north of Gujarat in the Bombay Presidency. Its extreme length is about 220 miles and its greatest breadth about 166 miles, the area being 23,445 square miles. There are nearly 200 separate States in Kathiawar, which for purposes of administrative convenience is sub-divided into subordinate Agen-

Sandur—The State is almost surrounded by the District of Bellary. The State is under the Political Control of the Agent to the Governor-General Madras States. After the destruction of the Empire of Vijayanagar in 1565 the State came to be held by semi-independent chiefs under the nominal sovereignty of the Sultan of Bijapur and in 1728 one of these chiefs, a Poligar of Bodar tribe, was turned out by an ancestor of the present Raja named Siddoji Rao of the Bhosle family of the famous Maharatta Chief Sivaji, they were Senapathies of Sivaji. In Sivaji Rao's time the State came under the Madras Government and his heirs in perpetuity with full powers, Civil and Criminal. In 1876 the title of Raja was conferred on the Chief as a hereditary distinction. The present ruler is Raja Bhairam Sahwan Rao Anna Sahab Ghorpade who was invested with full ruling powers in February 1930.

The Raja pays no tribute and maintains no military force. The most important staple crop is cholam. Teak and sandalwood are found in small quantities in the forests.

The minerals of the State possess unusual interest. The hematite found in it are probably the richest ore in India. An outcrop near the southern boundary forms the crest of a ridge 150 feet in height, which apparently consists entirely of pure steel grey crystalline hematite (specular iron) of intense hardness. Some of the softer ores used to be smelted, but the industry has been killed by the cheaper English iron. Manganese deposits have also been found in three places, and during 1911 to 1914 over 323,000 tons of manganese ore were transported by one company.

Agent to the Governor-General—A. N. L. Cater, Esq., C.I.E., I.C.S.

are known as the Western and Eastern Kathiawar Agencies. The Western Kathiawar Agency comprises the Halar and Sorath Prants, while the Eastern Kathiawar Agency comprises the Prants of Jhalawad and Gohirwad but in whichever of these two Agencies States with Salutes of guns are situated they are in direct political relations with the Hon. Mr. the Agent to the Governor-General. The history of the British connection with Kathiawar commences from Colonel Walker's settlement of 1807. In 1863, the States in Kathiawar were classified into 7 classes and although classes have since been abolished, the various jurisdictions still remained graded, as fixed in 1863.

Cutch—Before the creation in October 1924 of the Western India States Agency the relations of the Cutch Durbar with the Bombay Government were conducted through a Political Agent in charge of the Cutch Agency, with Headquarters at Bhuj. The Cutch Agency and the appointment of the Political Agent have since been abolished and the State of Cutch is in direct relations with the Hon. Mr. the Agent to the Governor-General in the States of Western India.

Benares Kantha Agency—This group of States in Gujarat, comprises of the Third Class States of Tharad, Fourth Class States of Vav, Fifth Class State of Malek Joravar Khanji of

Varahi and a few minor estates and talukas. Before the year 1920 it was known as the Jalandpur Agency, when it also comprised of the First Class States of Palanpur and Rudhanpur. Subsequent upon the transference of these two First Class States of Palanpur and Rudhanpur to the direct political relationship with the Government of India through the Hon. the Agent to the Governor General in the State of Western India the group comprising the remaining 112 minor States, Estates and Talukas, has been named the Bharat Kashi Agency and in June 1921, the British Government has been re-named the Bharat Kashi Agency and in June 1921, the British Government has been re-named the Bharat Kashi Agency and in June 1921, the British Government has been re-named the Bharat Kashi Agency.

Bhavnagar—This State lies at the head and west end of the Gulf of Cambay. The Gohel Rajputs to which tribe the Ruler of Bhavnagar belongs are said to have settled in the country about the year 1380, under Bhajji, from whom three sons—Rajaji, Baraji, and Bhaji—descended respectively the chiefs of Bhavnagar, Rajaji and Palitana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the chief of that State took pains to destroy the pirates which infested the neighbouring seas. The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gekwar but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1801. The State pays an annual tribute of Rs 128,000 to the British Government. Rs 3581 5-0 as Peskash to Laroda and Rs 22,808 as Zorali to Junagadh. During the minority of His Highness the Minor Maharaja Kishna Kumarsinhji who succeeded to the gadi on the death of his father Maharaja Bhajji Keshri on 17th July 1919 the administration of the State has been entrusted to a Council of Administration. The Council consists of Mr. Prabhakhar D. Patani, K.C.S.I. as President and Lieut. Colonel A. H. H. Mosse as Vice President. The other members of the Council are Dewan Bahadur T. K. Tirvodi and Khir Bahadur S. A. Goghawala, M.A., L.B. Bar at law. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others, being directly responsible to the Council.

The chief products of the State are grain, cotton, sugar-cane and salt. The chief manufactures are oil, copra, and brass vessels and cloth. The Bhavnagar State Railway is 294 miles in length. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carried on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 270 State Landers and 250 State Infantry.

Population (in 1921) was 426,404 of whom 86 per cent were Hindus and 8 per cent Mahomedans. The average income for the last five years was Rs 10,29,734, and the average expenditure Rs 34,32,739.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,187 square miles exclusive of the Dhrangadhra portion of the Rann

of Anich. The ruler of Dhrangadhra is the head of the Jhala family of Rajput, originally called the Makvana. This Rajput clan is of great antiquity having migrated to Kathiawar from the North, establishing itself first at Patli in the Ahmedabad District thence moving to Halvad and finally settling in its present seat being the guardians of the North Western march of Kathiawar they had to suffer repeatedly from the successive invasions of the Mahomedans into that Peninsula but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad its surrounding territories and the salt pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb the States of Sukkur, Lakhdi, Vadhwan, Lakhdi, Sayla and Jhan Lakhdi are offshoots from Dhrangadhra. His Highness Maharaja Shri Bhajji Keshri is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the Maharaja's directions by the Dewan Rana Shri Mansinhji of Jhala. The soil being eminently fit for cotton cultivation the principal crops are long staple cotton and cereals of various kinds. Lathi and bundu, and ornamental stone is quarried from the hills situated within the State. Vadhwa salt of an excellent quality with Magnesium chloride and other bye products of salt are also manufactured at the State salt works at Kuda which offer practically an inexhaustible supply for their manufacture. The capital town is Dhrangadhra a fortified town 70 miles west of Ahmedabad.

Dhrangadhra State owns the Railway from Vadhwan Junction to Halvad a distance of 30 miles which is worked by the B. & C. I. Railway. An extension of this line to Malgaj is under contemplation. A railway siding has been built from Dhrangadhra to Kuda—a distance of 11 miles—to facilitate the salt traffic.

Gondal State—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Maharaja Bhikot Sahib the present Ruler being H. H. Shri Bhagwat Singh K.C.S.I. The early founder of the State, Kumbhaji, had a modest estate of 20 villages. Kumbhaji II, the most powerful chief of the House, widened the territories to almost their present limits by conquest but it was left to the present ruler to develop its resources to the utmost and in the words of Lord Reay Governor of Bombay by its "importance and advanced administration to get it recognised as a First Class State. The State pays a tribute of Rs 10,721. The chief products are cotton and grain and the chief manufactures are cotton and woolen fabrics and gold embroidery. Gondal has always been pre-eminent amongst the States of its class for the growth with which public works have been prosecuted, and was one of the earliest pioneers of railway enterprise in Kathiawar having initiated the Dham Dhori line, it owns the Bhaga Jam Jodhpur section called the Gondal Railway and manages it along with the Jetalpur Rajkot Railway and H. H. Gackwad a subsidiary Dham line, it subsequently built the Jetalpur Rajkot Railway in partnership with other Native States in Kathiawar. There are no export and import dues the people being free from taxes and dues. Comparatively speak-

ing Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been recently ordered by His Highness. Rs 25 lakhs have been spent on irrigation tanks and canals, water supply and electricity to the town of Gondal. The Capital is Gondal, a fortified town on the line between Rajkot and Jethalar.

Junagadh State.—A first class State under the Western India States Agency and lies in the South Western portion of the Kathiawar Peninsula between 24°-44' and 21° 53' North latitude 80° and 72° East longitude with the Halar division of the province as its northern boundary and Goldwad Prant to its east. It is bounded on the south and west by the Arabian sea. The State is divided into 18 Mahals. It has 16 ports of which the principal are Veraval and Mangrol. The principal rivers in the State are the Bhadar, Uben, Oxt, Hiran Baraswat Machhundri, Sin gada, Meghal, Vraji, Hival and Sabli. The principal town of Junagadh which is one of the most picturesque towns in India, is situated on the slope of the Girnar and the Datar Hills, while in antiquity and historical interest it yields to none. The Upperkot or old citadel contains interesting Buddhist caves and the whole of the ditch and neighbourhood is honey combed with caves of their remains. There are a number of fine modern buildings in the town. The famous Ashoka inscription of the Buddhist time carved out on a big block of black granite stone is housed at the foot of the Girnar Hill, which is sacred to the Jains the Shivalites the Vaishnavites and other Hindus. To the south-east of the Girnar Hill lies the extensive forest of the Gir comprising 484 square miles, 825 acres and 10 gunthas. It supplies timber and other natural products to the residents of the State and the neighbouring districts and is unique as the sole stronghold of the Indian lion. The area of the State is 3,336.9 square miles and the average revenue amounts to about Rs 78,00,000. The total population according to the census of 1921 was 4,65,493 of which 3,68,003 were Hindus 80,091 Mahomedans 7,216 Jains, 90 Christians, 53 Parsis while 40 were of other castes. Until 1472 when it was conquered by Sultan Mahomed Begra of Ahmedabad Junagadh was a Rajput State ruled by Chiefs of the Chunda Rana tribe. During the reign of the Emperor Akbar it became a dependency of Delhi under the immediate authority of Moghal Viceroy of Gujarat. About 1786 when the representatives of the Moghals had lost his authority in Gujarat, Sherikant Babi, the ancestor of the present Babi Ruler, expelled the Moghal Governor and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The principal articles of production in the State are cotton bajri, jawar, sesamum, wheat, rice, sugarcane, cereals, grass, timber, stone, castor seed, fish, country tobacco, groundnuts, coconuts, bamboo, etc., while those of manufacture are ghee, molasses, sugar, candy, copper, and brassware, dyed cloth gold and silver embroidery, pottery, hardware, leather, bamboo furniture, etc. The State pays a tribute of Rs 28,304 annually to the Paramount Power and Peshkashi of Rs 83,210 to His Highness the Gaekwar on the other hand the State of Junagadh receives a tribute styled Zorabai amounting to Rs 92,421 from not less

than 134 States and Talukas, a relic of the day of Mahomedan supremacy. The State maintains Junagadh State Forces and the Mahabat Khanji Infantry, the sanctioned strength of the former being 178 and of the latter 220 inclusive of Bag pipe Band.

The Chief bears the title of Nawab. The present Nawab is His Highness Sir Mahabat Khan III, K.C.S.I., and is the ninth in succession and seventh in descent from His Highness Nahadurkhanji I the founder of the Babi Family of Junagadh in 1735 A.D. His Highness the Nawab Sahib was born on 2nd August 1900 and succeeded to the post in 1911, visited England in 1913. He received his education at the Mayo College, Ajmer, and has been invested with full powers since March 1920. His Highness the Nawab Sahib is the Ruler of the Premier State in Kathiawar ranks first amongst the Chiefs of Kathiawar, exercising plenary powers and enjoys a salute of 15 guns. Personal 18 permanent and 15 local within the territorial limits of the Junagadh State. Languages spoken—Gujarati and Urdu.

Capital—Junagadh.

Ruler—His Highness Sir Mahabat Khanji Rasulkhanji, K.C.S.I.

Heir Apparent—Mahomed Dilawarkhanji, Prince Mahomed Himatkhanji.

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 2,791 square miles. The Maharaja of Navanagar is a Jadeja Rajput by caste, and belongs to the same family as the Ruler of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethiwar then established at Ghumli. The town of Jamnagar was founded in 1540. The present Jam Sahib is the well-known cricketer, H. H. Jam Sahib Shri Ranjitsinhji Vibhaji, who was born in 1872 and succeeded in 1907. The principal products are grain, cotton and oil-seeds, shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs. 1,20,000 per annum jointly to the British Government, the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains two squadrons of Aswanagar State Lancers and 1½ company of the State Infantry. The Capital is Jamnagar a flourishing place, nearly 4 miles in circuit, situated 5 miles east of the port of Bedi. Population 345,353. Revenue nearly Rs 90 lakhs.

Revenue Secretary—Gokulbhai B. Desai, Bar-at-law.

Political Secretary—Parshuram B. Junnarkar, B.A. LL.B.

General Secretary—Hirabhai M. Mehta, B.A. (Cantab.), Bar-at-law.

Hon'ble Personal Assistant and Private Secretary—P. M. Kuranjia, Esq.

Cutch—The State is bounded on the north and north-west by Sind on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Kham of Cutch, is 7,616 square miles. The capital is Bhuj, where the ruling Chief (the Maharaja) His Highness Maha Rao Sri Khengarji Saval Bahadur, C.S.I., G.D.I.B., resides from his isolated position, the special characteristic of

its people their peculiar dialect and their strong feeling of personal loyalty to their ruler, the *Sehna* of Cutch has more elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind ruler of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or children of Jada. The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch and wheat, barley and cotton are cultivated. Poth iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhatyas are invested with jurisdictional powers in varying degrees in their own Estates and over their own riot. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhatyas. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the State now pays Rs. 82,257 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which, there are some irregular infantry, and the Bhatyas could furnish on requisition a mixed force of four thousand.

Palanpur—Palanpur is a first class State with an area of 1,708 square miles and a population of 246,212. The gross revenue is about 10½ lakhs.

The State is under the rule of Captain His Highness Zuhdatul Mulk Dewan Mahakshatray Muhammad Khan Bahadur, K.C.I.E. K.C.V.O. Nawab of Palanpur. His Highness is descended from the Usafiz Loban, an Afghan tribe who appeared in Gujarat in the 14th century. The connection of the British Government with the State dates from 1819 in which year the Ruler was murdered by a body of nobles. Two high roads from Ahmedabad pass through the State and a considerable trade in cloth, grain, sugar and rice is carried on. The State pays tribute of Rs. 88,462 to the Gaekwar of Baroda. The capital is Palanpur situated on the B. N. & C. I. Railway, and is the junction station of the Palanpur Desa Branch of B. N. & C. I. Railway. It is a very old settlement of which mention was made in the 8th century.

Radhanpur is a first class State with an area of 1,150 square miles which is held by a branch of the illustrious Babi family who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H. H. Jalaluddin Khan, the Nawab of Radhanpur. The State maintains a Police force of 200. The principal products are cotton, wheat and grain. The capital is Radhanpur town a considerable trade centre for Northern Gujarat and Cutch. Samitis a cotton press and three spinning factories. There is one spinning factory at Munjpur and one at Lolada. One large spinning factory has been recently constructed at Bunkeshwar which is a great centre of Jain pilgrimages all the year round.

STATES IN THE BOMBAY PRESIDENCY

The territories under the rule of Indian Princes and Chiefs in the Bombay Presidency extend over an area of 28,039 square miles. The characteristic feature of the Bombay States is the great number of petty principalities. The recognition of these very numerous jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. In no part of India there is a greater variety of principalities. Some of the largest are of modern origin, having been founded by the Marathas in the general scramble for power in the middle of the 18th century but the Rajput houses in the Gujarat Agencies date from earlier times. Interesting traces of ancient history are to be found at Sachin and Jasura, where Chiefs of foreign ancestry, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal Chiefs—Bhils or Kolis exercise very limited authority in the Dangs and the hilly country that fringes the Mahi and the Narmada rivers.

The variety of the relations which under the terms of the several treaties subsist between the British Government and the rulers of the different States, and the general superintendence exercised by Government as the Paramount Power, necessitate the presence of an Agent or

representative of Government at the Principal Courts. The smaller and less important States are either grouped together under the general supervision of a Political Agent or are looked after by the Collectors of the districts which they adjoin. The position of the Agent varies, roughly speaking with the importance of the State. In some cases he does little more than give advice and exercise a general surveillance. In other cases the Agents are invested with a direct share in the administration, while States the Rulers of which are minor are directly managed by Government Officers or under arrangements approved by Government. Some of the States are subordinate to other States and not in direct relations with the British Government. In these cases the status of the feudatories is usually guaranteed by Government. The powers of the Chiefs are regulated by treaty or custom, and range downwards to a mere right to collect revenue in a share of a village, without criminal or civil jurisdiction as in the case of the petty Chiefs in the Mahi Kantha and Rewa Kantha Agencies.

The number of Indian States in the Bombay Presidency is 151, with an area of 28,039 square miles and population (1931) of 3,479,095. They are divided for administrative purposes into the following Agencies: Belgaum Agency,

Savarnadi, Bijapur Agency, Jath Dharwar Agency, Savanur, Kaira Agency, Cambay Kolaba Agency, Jamira Kolhapur Residency and Southern Maratha Country States Agency, 9 States (Kolhapur with 9 feudatories), Jamkhanda: Kurundwad Senior, Kurundwad Junior, Miraj Senior, Miraj Junior, Mudhol, Ramdurg and Sangli), Mahi Kantha Agency, 51 States (principal States Idar and Danta), Nashik Agency, Borgana, Poona Agency, Dhore, Bawa, Kantha Agency, 62 States (principal States, Balasamor, Baria, Chhota, Udepur, Lunawada, Rajpuri, and Bant), Satara Agency, Aundh and Phaltan, Sholapur Agency, Akalkot, Sukkur Agency, Kharapur, Surat Agency, 3 States (Bansda, Dharanpur and Sachin) and 14 Dang Chikla, Thana Agency, Jawhar. The table below gives details of the area of the more important States—

State	Area in sq miles	Population (in 1921)	Approximate Revenue
Balasamor	189	44,030	Rs 2,51,000
Bansda	216	40,128	7,97,521
Bawa	813	137,291	8,83,194
Bhor	925	130,420	5,79,887
Cambay	350	71,715	9,94,934
Chhota Udepur	890	125,702	12,41,000
Danta	347	19,341	1,74,306
Dharanpur	704	93,171	12,47,821
Idar	1,969	226,365	16,75,689
Jamira	324	87,334	7,43,307
Jawhar	310	49,662	5,57,688
Kharapur	8,060	193,152	25,57,871
Kolhapur	8,217	898,728	14,01,844
Lunawada	888	83,133	7,75,000
Mudhol	868	60,140	4,72,000
Rajpuri	1,517	163,454	17,21,282
Sachin	49	19,977	4,12,000
Sangli	1,126	221,321	11,71,184
Savarnadi	925	206,440	6,92,508
Satara	394	70,957	2,44,509

Bijapur Agency.—This comprises the Satara Jaghir of Jath (980·8 square miles in area). On the annexation of Satara, in 1849, Jath and Daphlapur like other Satara Jaghirs, became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppression on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small estate of Daphlapur with an area of 96·8 square miles passed to the Jath Jaghir on the demise of its last ruler, Hambai Sahib Daphle in January 1917. The Chief of Jath who belongs to the Maharashtra caste, ranks as a first class Sardar. The succession follows the rule of primogeniture. The present Chief, Moharban Vijayashinharao Ramrao alias Babamahesh Daffie succeeded his father who died on August 14, 1923 and was installed on January 12th, 1929. He conducts the adminis-

tration of the Jath State with the advice of the Government Adviser appointed by Government. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs 6,400 per annum in lieu of horse contingent and Rs. 4,817 on account of Sardeshmukhi rights.

Political Agent.—V. R. Maidhekar, M. A., Collector of Bijapur.

Dharwar Agency.—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jagadar of Emperor Aurangzeb. At the close of the last Maratha War the Nawab of Savanur, whose conduct had been exceptionally loyal, was confirmed in his possessions by the British Government. The State pays no tribute. The principal crops are jowari and cotton. The area is 76 square miles and population 10,830. The revenue is Rs 2,01,410-6-3. The present chief is Captain Moharban Nawab Abdul Majid Khan Duler Jang Bahadur Nawab of Savanur.

Political Agent. J. F. B. Huthorne, I.C.S.

Kaira Agency.—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Aulhiwada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India. At the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1780, the founder of the present family of Chiefs being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussein Yawar Khan who is a Shahi Mogul of the Najumiansi family of Persia, and was born on the 16th May 1911. His father, the late Nawab Jaffar Ali Khan, died on 21st January 1916, leaving him a minor. The State was under British administration up to December 1930 when the Nawab was installed on the throne. The State pays a tribute of Rs. 21,924 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay via Petlad, connecting with the B. R. & C. I. Railway; at Anand. Cambay is a first class State having full jurisdiction. Revenue is about eight lakhs. The area of the State is 350 square miles, population 71,715.

Political Agent. A. Master, I.C.S.
Administrator. M. S. Moulvi, M.A.

Kolaba Agency.—This Agency includes the State of Jamira in the Konkan, a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point in its history is the successful resistance that it alone, of all the States of Western India, made against the determined attacks of the Marathas. The British, on succeeding the Marathas as masters of the Konkan, refrained from interfering in the internal administration

of the State. The chief is a Sunni Mahomedan, by race a Sidi or Abyssinian with a title of His Highness the Nawab. He has a sacred guarantee of succession according to Mahomedan law and pays no tribute. Till 1868 the State enjoyed singular independence there being no Political Agent, and no interference whatever in its internal affairs. About that year the maladministration of the chief, especially in matters of police and criminal justice became so flagrant that those branches of administration were in consequence taken out of his hands and vested temporarily in a Political Agent. The last ruler, H. H. Nawab Sidi Bur Ahmed Khan, died on 2nd May 1922, and was succeeded by his son Sidi Muhammad Khan born on the 7th March 1914. The area of the State is 377 square miles and the population 98,310. The average revenue is 8 lakhs including that derived from a small dependency named Jafferabad in the south of Kathiawar under the Kathiawar Agency. The State maintains an irregular military force of 241. The capital is Murud on the main land, the name of Janjira being retained by the island fort opposite. The Chief is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war the last ruler a salute was raised on the 1st January 1916 to 12 guns personal and 18 permanent within the limits of his own State from the 1st January 1921. The State is now under a minority administration with the minor Nawab's mother as Regent, assisted by a Dewan appointed with the approval of Government. The present Dewan is Mr P. R. Kapadia, B.A., a retired Deputy Collector.

Kolhapur Agency.—Kolhapur is a State with an area of 3,317 square miles and population of 833,726. Subordinate to Komapur

are nine feudatories of which the following four are important: Veshalgarh Bawda, Kanai (senior), and Ishalkaranj. The ruler's house traces its descent from a younger son of Shivaji, founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1783 and again in 1792 when the Raja agreed to give compensation for the losses which British merchants had sustained since 1783, and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1813 a treaty was concluded with the British Government by which, in return for the cession of certain ports, the Kolhapur Raja was guaranteed against the attacks of foreign powers while on his part he engaged to abstain from hostilities with other States, and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice, sugar-cane, and the manufactures are cotton-textile and woollen cloths, pottery and hardware. The State pays no tribute, and supports a military force of 692. The nine feudatory estates are administered by their holders except in the case of four whose holders are minors. Kolhapur proper is divided into seven *petas* or talukas and three *mahals* and is managed by the Maharaja who has full powers of life and death. The Southern Maratha Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

Resident and Senior Political Agent for Kolhapur and the Southern Maratha Country.—Major L. E. Lang, C.I.E., M.C.

Southern Maratha Country States.—The Agency consists of the following eight States:—

Name of State	Area in square miles	Population	Tribute to British Government	Average revenue
			Rs	Rs
Sangli	1,136	221,321	1,30,000	13,60,872
Miraj (Senior)	342	82,580	12,558	4,31,204
Miraj (Junior)	196½	84,665	7,869	3,52,332
Kurnadwad (Senior)	182½	88,760	9,619	3,56,250
Kurundwad (Junior)	114	34,288		2,70,928
Jamkhadi	524	101,190	20,516	9,44,310
Mudhol	268	60,140	2,672	4,80,599
Randurg	169	33,907		3,69,483
Total	3,322	606,946	1,87,754	46,66,028

Mahikant—This group of States has a total area of 3,124 square miles and a population of 450,475, including that of Idar, which is 324,351. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. Idar covers more

than half the territory. It has an area of 1,668 square miles and an average revenue of Rs 16,47,379. The present Ruler of Idar, Lieutenant-Colonel H. H. Maharaja Sir Doria Singhji, K.C.S.I., is a Rajput of the Bahadur clan. He was born in 1878 and ascended the Gadi in

Surat Agency.—This is a small group of three second class States under the Political Agent, Surat

State	Ruling Chiefs	Area in sq miles	Population (1921)
Dharampur	Maharaja Shri Vijayadevi Mohandevji	704	96,171
Bansda	Maharaja Shri Indrasinhji Pratapsinhji	215	40,126
Sachin	His Highness Nawab Sidi Muhamad Halder Mohamed Yakub Khan Maharajad Daula Nasrat Jung Bahadur	49	10,977

The joint revenue of these States is Rs. 24,68,000. Tribute is paid to the British Government of Rs. 9,154. There is also attached to this Agency a tract of country known as the Dangas which has an area of 652 square miles and a population of 24,576 and a revenue of Rs. 24,711. The country is divided into 14 Dangas or States of very unequal area, each under the purely nominal rule of a Bhil Chief with the title of Raja, Malik, Eradhan or Pagar. **Thana Agency.**—This includes the State of Jawhar, in the Thana District, on a plateau above the Konkan plain. It has an area of

310 square miles and a population of 49,662 and revenue of 5,21,927. Up to 1294, the period of the first Mahomedan invasion of the Deccan, Jawhar was held by a Varli, not a Koli chief. The first Koli chief obtained his footing in Jawhar by a device similar to that of Dido when he asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips, and thus enclosed the territory of the State. The present chief is Raja Fudangsha alias Lashwantro Vikramsha, who is a minor and hence the State under British administration.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar.—This State, which at one time comprised almost the whole of the Northern Bengal Aram and a part of Bhutan now known as the Duma, is a low lying plain in North Bengal. It has an area of 1,518 square miles, a population of 592,480 and a revenue of over 44 lakhs. By the demise of the late ruler His Highness Maharaja Sir Jitendra Narayan Bhup Bahadur in December 1922 in England his eldest son Jivraj Jagaddipudra Narayan (born on December 15, 1915) succeeded to the gadi at the age of 7 which necessitated a minority administration under the guidance of a Regent. His Highness the Maharaja belongs to the Khatris of the Khatris of the Khatris origin. The present Maharaja has three sisters Maharajkumari Ilia Devi (aetat 16), Aroha Devi (aetat 11) and Menaka Devi (aetat 10) and one brother Maharajkumar Indrajit Narayan (aetat 12). Her Highness the Maharani Sahiba of Cooch Behar was appointed Regent under the wishes of the late Maharaja and administers the State on behalf of her minor son with a Council of Regency, comprising three members at present, of which Her Highness is the President. Cooch Behar once formed part of the famous Kingdom of Kanpur. British connection with it began in 1772 when owing to invasions of the Bhutias, the assistance of the East India Company was invoked. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar which is reached by the Cooch Behar State Railway, a branch of the Eastern Bengal State Railway System.

Tripura.—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,116 square miles and a population of 304,437. The revenue from the State is about 20 lakhs and from the Zemindaries in British India is about 18 lakhs. The present Ruler is Maharaja Manjya

Sir Bikram Kishore Deb Barman Bahadur who is a Khatris by caste and comes of the Tamar race. He was born on 18th August 1908 and he is entitled to a salute of 18 guns. He succeeded the late Maharaja Manjya Dhirendra Kishore Deb Barman Bahadur on 13th August 1923. The Military prestige of Tripura dates back to the fifteenth century and a mythical account of the strength of the State, the history to an even earlier date. Both as regards its constitution and its relations with the British Government the State differs alike from the large Native States of India and from those which are classed as tributary. Besides him, the Ruler of Tripura the Maharaja also holds a large landed property situated in the plains of the Districts of Tippera, Noakhali and Sylhet. This estate covers an area of 600 square miles and is held to form with the State an indivisible Raj. Disputes as to the right of succession have occurred on the occasion of almost every vacancy in the gadi producing in times gone by minor wars and domestic wars, and exposing the inhabitants to serious disorders and attacks from the Kukis who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, oil, tea and forest produce of various kinds the traffic being carried chiefly by water. The Maharaja received full administrative powers on 15th August 1927. His Highness married the sixth daughter of the late Maharaja Sir Bhagabati Prasad Singhji Sahab Bahadur KOTA, K.B.M. of Balarampur (Oudh) on the 11th January 1929. The State courts are authorised to inflict capital punishment.

Political Agent.—Magistrate and Collector of Tippera (Ex-officio)

UNDER THE GOVERNMENT OF BIHAR AND ORISSA

Under this Government there are the Chota Nagpur Feudatory States of Kharsawan and Raxauli and the Orissa Feudatory States 24 in number. The total area is 28,666 square miles and the total population 3,959,689. The average revenue is Rs 1,12,72,479. The inhabitants are all men of Kolarian or Dravidian origin and their condition is still very primitive. The Chief of Kharsawan belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793 and in consequence of disturbances on the frontier of the old Jungli Mahals the Phakur of Kharsawan and the Kunwar of Barakela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The Chief is bound when called upon to render aid to the British Government but he has never had to pay tribute. His present sanad was granted in 1919. He exercises all administrative powers executive and judicial subject to the control of the Political Agent and Commissioner, Orissa Feudatory States. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Balasore is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States—This group of 24 dependant territories is situated between the Mahanadi Delta and the Central Provinces and forms the mountainous background of Orissa. The names of the individual States are Athgarh Talcher, Mayurbhanj Nilgiri Keonjhar Pal Lahara Dhenkanal Khumalikh Hindol Narasinghpur Baramba Ligria Khanpara Navagarh Ranpur Daspalla and Band. To these there were added in 1903 the following States Baira, Rairakhol Bompur, Patna and Kalahandi from the Central Provinces and Ganypur and Bonai from the Chota Nagpur States. The total population is 2,907,172 with an average revenue of Rs 34,80,039. The Feudatory States have no connected or authentic history. Comprising the western and hilly portion of the province of Orissa they were never brought under the central government, but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races, who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild hordes of the forests on the other. In course of time their hill retreats were penetrated by Arya and venturers, who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north came to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jai Singh became ruler of Mayurbhanj over 1,300 years ago, and was succeeded by his eldest son, while his second son placed Keonjhar. The Chiefs of Band and Daspalla are said to be descended from

the same stock and a Rajput origin is also claimed by the Rajas of Khumalikh Narasinghpur, Pal Lahara Talcher and Ligria. Nayagarh it is alleged was founded by a Rajput from Rewah and a son of the same family was the ancestor of the present house of Khandpara. On the other hand the chiefs of a few states, such as Athgarh Baramba and Dhenkanal owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient the list of its chiefs covering a period of over 800 years. It is noteworthy that this family is of Khona origin and furnishes the only known instance in which amid many vicissitudes the supremacy of the origin is still retained in tact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in raising invaders but in other respects neither the ancient kings of Orissa nor their successors the Vughals and Marathas ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them but they are made up of most part of legend and fiction and long genealogical tables of doubtful accuracy and contain very few features of general interest. The British conquest of Orissa from the Marathas which took place in 1803 was immediately followed by the submission of ten of the Tributary States the Chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa but as they had always been tributary states rather than regular districts of the native governments, they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would preclude their being brought under the ordinary jurisdiction of the British courts if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and thus was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed by sanads which in the case of Ganypur and Bonai were last revised in 1919 and in the case of the others in 1915. They recite the rights privileges duties and obligations of the Chiefs providing for the settlement of boundary disputes and indicating the nature and extent of the control of the Political Agent and Commissioner.

Political Agent and Commissioner P C Talents C 12

UNDER THE GOVERNMENT OF THE UNITED PROVINCES

Three States Rampur Tehri and Benares are included under this Government —

State	Area Sq Miles	Population	Revenue in lakhs of Rupees
Rampur	892	4,3,607	54
Tehri (Garhwal)	4500	318,482	14
Benares	875	1,62,735	22

Rampur State—The State of Rampur was founded by Nawab Qasim Ali Mohammad Khan Bahadur in the middle of the 14th century and his dominions included a considerable portion of what is now known as Rohilkhand. The founder belonged to the famous Sayeds of the Bareilly clans in the Muzaffarnagar district and was a statesman of remarkable ability. He rendered invaluable services to the Mughal Emperor who recognised him as Ruler of Rohilkhand.

Upon his death his Kingdom underwent many vicissitudes and was considerably reduced in size during the reign of his son Nawab Sayed Faizulla Khan Bahadur. The Province of Rohilkhand had now passed into the hands of the East India Company. Nawab Asaf-ud-Daula Khan Bahadur was most loyal and true to the British Government to whom he always looked up for help during those unsettled days and he gave tangible proof of his loyalty when during the war against France he offered all his cavalry 2000 strong to the British Government in 1878 and received the following message of thanks from the then Governor General—

That in his own name as well as that of the Board, he returned him the warmest thanks for this instance of his faithful attachment to the Company and the English Nation.

Another opportunity arose for the ruler of Rampur to evince his steadfast loyalty and devotion to the Imperial Cause on the outbreak of the Mutiny of 1857. His Highness Nawab Sir Sayed Yusuf Ali Khan Bahadur occupied the Musam of Rampur in those days. From this very start till peace was re-established in the country he was lavish in his expenditure of men and money on the side of the British Government. He fought their battles, saved the lives of many Europeans whom he provided with money and other means of comfort and had so much established his reputation as a good administrator that he was placed in charge of the Moradabad district. These signal services were recognised by the Government by the grant of an *ilaka* besides other marks of distinction.

The reign of His Late Highness Nawab Sir Sayed Mohammad Hamid Ali Khan Bahadur stood out unique in many ways. Rampur made great strides in trade and commerce and in fact in every walk of life. He took keen interest in Education and did not only contribute handsome donations but made annual grants to the various educational institutions. He was no whit behind his compatriots in his loyalty to the British Government. The

Great War of 1914 found him foremost in offering his personal services and all the resources of the State—men, money and material—to the British Government. The 1st Rampur Infantry was sent to East Africa and returned home after nearly four years' service and won the favourable remarks of high British Officers. Besides the expenditure involved in this His Highness also participated in the Scheme of the Hospitalship. Loyalty and contributed one lakh of rupees towards the cost and upkeep of it. His other contributions to the various funds amounted to over half a lakh of rupees and he also subscribed Rs 700,000 to the two War Loans. At the time of the Afghan War 1919 the 1st Lancers and the Imperial Service Infantry were sent on garrison duty in British India.

The Present Ruler His Highness Nawab Sayed Raza Ali Khan Bahadur succeeded his Father on 20th June 1920. His Highness was born on 17th November 1900 and was educated at the Rukumar College, Rajkot. He is an enlightened ruler and takes very keen interest in the administration of the State.

Since his accession too the Masnad His Highness has introduced reforms in Judicial Police and Army Departments and during the short period that the reins of the State have been in his hands he has overhauled and reorganised the whole administration. His Highness is also greatly interested in education, commerce and industry and has taken practical steps to improve them. The welfare of his subjects and their advancement in every walk of life is the cherished desire of His Highness.

His Highness has one son Sahibzada Sayed Murtaza Ali Khan Bahadur who is the Heir Apparent.

The permanent salute of the State is 15 guns and the annual income over fifty lakhs of rupees.

Tehri State (or Tehri Garhwal)—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history to the State is that of Garhwal District; the two tracts having formerly been ruled by the same dynasty. Pradyumna Shah, the last Raja of the whole territory, was killed in battle fighting against the Gurkhas, but at the close of the Nepalese War in 1815 his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859. The present Raja is Captain H H Narendra Shah, C.S.I. The principal products are rice and wheat grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. The strength of the State forces is 330. The capital is Tehri, the summer capital being Pratapnagar, 3,000 feet above the sea-level.

Agent to the Governor-General The Governor of the U P of Agra and Oudh

Benares—The kingdom of Benares under its Hindu Rulers existed from time immemorial and finds mention in Hindu and Buddhist literature. In the 12th century it was conquered by Shahab-ud-din Ghori and formed a separate province of the Mohammadan Empire. In the 18th century when the powers of Moghal Emperors declined after the death of Aurangzeb, Raja Manu Ram an enterprising zamindar of Ganganagar (Benares District) founded the State of Benares and obtained a *sansad* from the Emperor Mohammad Shah of Delhi in the name of his son Raja Balwant Singh in 1738. Raja Manu Ram died in 1740 and his son Balwant Singh became the virtual ruler. During the next 80 years attempts were unsuccessfully made by Saifdar Jung and after him by Shuja-ud-daula of Oudh to destroy the independence of the Raja and the fort of Ramnagar was built on the bank of the Ganges opposite the Benares city. Raja Balwant Singh died in 1770 and was succeeded by his son Chet Singh. He was expelled by Warren Hastings. Balwant Singh's daughter's son Mahip Ram Singh was placed on the seat. The latter proved an imbecile and there was maladministration which led to an Agreement in 1794 by which the lands held by the Raja in his own right which was granted to him by the British Government, were separated from the

rest of the province. The direct control of the latter was assumed by the Government and an annual income of one lakh of rupees was assured to the Raja while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 the major portion of these Domains became a State consisting of the paraganas of Bhadohi and Chakia (or Kera Mangraur) the town of Ramnagar and its neighbouring villages were ceded by the British Government to the Maharaja in 1913 and became part of the State. The Maharaja's powers are those of a ruling Chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with crime. The present ruler is Lieut.-Colonel H. H. Maharaja Sir Izzat Nizam Singh Bahadur, C.S.I. C.O.I.E., L.D., who was born in 1855 and succeeded to the State in 1880. He is entitled to salute of 16 guns and is a Hon. Lieut. Colonel in the Indian Army. His Her Apparent is Maharaj Kumar Aditya Nizam Singh Bahadur.

PUNJAB STATES

There are 13 States of the Punjab which since 1947 have been in direct political relation with the Government of India through the Hon. U

th Agent to the Governor General, Punjab. The following are details—

Name	Permanent salute in guns	Area (sq. miles)	Population (1921)	Approximate revenue lakh of rupees
Bahawalpur	17	5,932	1,497,390	135.7
Bikaner	17	1,000	2,191	49.8
Bundi	13	1,000	205,183	20.3
Babha*	13	1,000	26,344	27.8
Bajpur*	13	1,000	26,344	27.8
Bahawalpur	11	1,200	185,048	13.4
Bahawalpur (A. B. S.)	11	1,196	110,168	6.0
Bahawalpur (K. B. S.)*	11	148	98,000	3.0
Bahawalpur	11	164	40,122	14.7
Bahawalpur*	11	643	150,661	18.0
Bahawalpur	11	3,216	141,889	8.4
Bahawalpur	11	4,000	51,338	2.3
Bahawalpur	9	223	20,614	1.3

Bahawalpur—A Native State in direct political relationship with the Government of India through the Agent to the Governor General Punjab States Agency. Bahawalpur is situated between the Punjab and Rajputana, latitude 24° 15' to 28° 22' 15" long 70° 47' to 74° 15' and bounded on the North East by the District of Ferozepur on the East and South by the Rajputana States of Bikaner and Jaisalmer on the South West by Sind on the North West by the Indus and Sukli rivers. Area, 10,000 square miles.

This State is about 300 miles in length and about 50 miles wide, is divided lengthwise into three great strips. Of these the first is a part of the Great Indian Desert, the central track is chiefly desert not capable of cultivation identical with the Bar or Fatauplands of the Western Punjab and the third, a fertile alluvial tract in the river valley is called the hind. The ruling family is descended from the Abbassid Khalifa of Baghdad. The tribe originally came from Sind and assumed independence during the dismemberment of the Durran,

empire in the Treaty of Lahore in 1809 Ranjit Singh was confined to the right bank of the Beas.]

The first treaty with Bhawalpur was negotiated in 1853, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territories and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death the succession was disputed and for a time the administration of the State was in the hands of the British authorities. The present Nawab is Capt. H. H. Roshni Dauli, Nizam-ul-Jang, Bahadur, Mulk, Mukhlis and Daula, Nawab Sir Sidiq Muhammad Khan Bahadur Agha, who was born in 1904 and succeeded in 1907. During his minority the State was managed by a Council of Agency which ceased to exist in March 1924 when His Highness the Nawab was invested with full power. His Highness is now assisted in the administration of his State by a Chief Minister, Izat Mahan, Imad-ul-Mulk, Rajul Wazir, Khan Bahadur Mir Nair, Buksh Muhammad Hussain, a Public Works and Revenue Minister, Mr. C. A. Barron, C.B.I., C.V.O.

The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North Western State Railway passes through the State. The State supports an Imperial Service combined Infantry in addition to other troops. The capital is Bahawalpur, a walled town built in 1748.

Income from all sources about 50 lakhs. Languages spoken Multani or Western Punjabi (Jatki), Sindhi and Marwari.

Agent to the Governor-General, Punjab States—
Mr. J. A. G. Fitzpatrick, B.A., LL.B., C.M.S., I.C.S.

Chamba—This State is enclosed on the west and north by Kashmir on the east and south by the British districts of Kangra and Gurdaspur, and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicle have been compiled.

Founded probably in the sixth century by Marut a Surajbansi Rajput, who built Brahmara, the modern Brahmara. Chamba was extended by Meru Varma (580) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence until the Moghul conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1640. The part west of the Beas was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now

stand, and it was declared independent of Kashmir. The present chief is H. H. Raja Bani Singh, who was born in 1890, and succeeded in 1919. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1884 for a term of 99 years, but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North Western Railway. Chamba town, on the right bank of the Beas, contains a number of interesting temples, of which that of Lakshmi Narayan dating possibly from the tenth century is the most famous.

Faridkot—The ruling family of this sandy level tract of land belongs to the Sidhu-Berar clan of the Jats, and is descended from the same stock as the Phulkian houses. Their occupation of Faridkot and Kot Kapura dates from the time of Akbar though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present Ruling Prince Farzand-i-Saadat Nisban Hazrat, Maharaja Yinda Bar Brins Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President, Sardar Bahadur Sardar Indar Singh, 2 A., and four members. The State has an area of 843 square miles with a population of 150,461 and has an annual income of 18 lakhs. The Ruler is entitled to a salute of 11 guns and a visit and return visit from the Viceroy. The State Forces consist of State Sappers and Household Troops (Cavalry and Infantry).

Jind—Jind is one of the three Phulkian States (the other two being Patiala and Nabha). Its area is 1,268 square miles, with a population of 306,183 souls and an income of 25 lakhs.

The history of Jind as a separate State dates from 1763 when Raja Gajpat Singh, the maternal grandfather of Maharaja Ranjit Singh, and great grandson of the famous Phul, established his principality. He was succeeded by Raja Bhag Singh who greatly assisted Lord Lake in 1803. His grandson Raja Sangat Singh was succeeded by the nearest male collateral Raja Sarup Singh in 1837. In the crisis of 1857 Raja Sarup Singh rendered valuable services to the British and was rewarded with a grant of nearly 600 square miles of land, known as Dadri territory. He was succeeded by his son Maharaja Ragbir Singh, who gave help to the British Government on the occasion of Kuka outbreak (1872) and the 2nd Afghan War (1878). The present ruler Maharaja Ranbir Singh was born in 1872, succeeded in 1887, and invested with full powers in 1899. The State rendered exemplary services in the Great European War. It supplied 8,673 men to the Indian Army and Imperial Service Troop and doubled the strength of its Imperial Service Infantry. The total contribution amounted to nearly 7 lakhs, in gifts of cash, materials, animals and troops.

His Highness enjoys a salute of 15 guns. The capital is Sangur, which is connected by a State Railway with the North Western Railway. The principal executive Officer of the State is called Chief Minister.

Ruler—Colonel His Highness Farand I Diband Raskh ul Iktad, Daulat; English: Raja Rajgan Maharaja Sir Ranbir Singh Rajendra Bahadur G O I R, K C S I etc

Kapurthala—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu whence the family springs and from which it takes the name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846 the estates north of the Sutlej were maintained in the independent possession of the Kapurthala Ruler conditional on his paying a commutation in cash for military service engagements by which he had previously been bound to Maharaja Ranjit Singh of Lahore. This annual tribute of Rs 1,21,000 a year was remitted by the Government of India in perpetuity in 1924 in recognition of the splendid war record and uniformly efficient administration of the State. The Bari Doab estates are held by the head of the House as a fief in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny the present Maharaja's grandfather was rewarded with a grant of other estates in Oudh which yield a large annual income equal to those of Kapurthala State. The present Ruler's title is Col H. H. Farand I Diband Raskh ul Iktad Daulat; English: Raja Rajgan Maharaja Jagvir Singh Bahadur Maharaja of Kapurthala G O I R (1911) G C I B (1918) G S S (1917) who was born on 24th November 1872 and succeeded his father His Highness the Late Raja Rajgan Kharak Singh of Kapurthala in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. His salute was raised to 15 guns and he was made Honorary Colonel of the 45th Battalion Sikhs. The Maharaja received the Grand Cross of the Legion d'Honneur from the French Government in 1924 and possesses also the Grand Cross of the Order of Carlos III of Spain, Grand Cross of the Order of the Star of Romania, Grand Cross of the Order of Monsek of Abyssinia, Grand Cordon of the Order of the Nile of Egypt, Grand Cordon of the Order of Morocco, Grand Cordon of the Order of Tunis, Grand Cross of the Order of Chili, Grand Cross of the Order of the Sun of Peru, Grand Cross of the Order of Cuba represented Indian Princes and Rulers on the League of Nations in 1926, 1927 and 1929 celebrated the Golden Jubilee of his reign in December 1927 with great éclat, when their Excellencies the Viceroy and Lady Irwin the Commander in Chief in India and Lady Birdwood Governor of the Punjab and Lady Haller, Their Highnesses the Maharajas of Jammu and Kashmir, Jikan Lal Bahadur Jangnagar Alwar, Bharatpur Rajputia Mandi, the Nawals of Palampur, Malerkotla, Bahawalpur and the Raja of Kalsia were present, besides a very large and distinguished gathering of European and Indian guests.

The rulers of Kapurthala are Rajput Sikh and claim descent from Rana Kapur a distinguished member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Baltanpur in this State is famous for hand printed cloths. Phagwara is another important town in the State and is very prosperous on account of its grain markets and factories for manufacture of agricultural implements and metallic utensils of household use. The situation of this town on the main railway line and the consequent facilities of export and import make its importance still greater and thus is the chief commercial town in the State. The main line of the North Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the capital. The Imperial Service and local troops of the State have been reorganised and are now designated as Kapurthala State Forces. The State Troops the strength of which was raised during the Great War to nearly 2,000 served the Empire in that crisis in East Africa, Mesopotamia and on the Afghan Frontier. Primary education is free throughout the State and it spends a large proportion of its revenues on its Education department. The State also possesses a Legislative Assembly which was created by the present Maharaja on the occasion of the Silver Jubilee of his reign in 1916. The capital is Kapurthala which has been embellished by the present Maharaja with a Palace of remarkable beauty and grandeur and with various buildings of public utility. The town boasts modern amenities such as electric light, water works etc.

Political Officer The Honble Agent to the Governor General Punjab State: Lahore

Malerkotla—This State consists of a level sandy plain unbroken by a hill or stream, bounded by the district of Ludhiana on the north by Patiala territory on the east and south and by the Ludhiana District, Patiala and Bahawal territories on the west. The rulers (Nawabs) of Malerkotla are of Khatriscent who came originally from the Province of Sherwan and settled in the town of Sherwan north of Persia and after settling for a time in Afghanistan near Ghazni came to India and settled at Maler the old capital of the State in 1442. Originally they held positions of trust under the Lodhi and Moghal Emperors. As the Moghal Empire began to sink into decay they gradually became independent. They were in constant feud with the newly created adjacent Sikh States. After the victory of Laswari gained by the British over Sindhas in 1803 and the subjugation and flight of Holkar in 1805 when the Nawab of Malerkotla joined the British Army the British Government succeeded to the power of the Malerkotla in the districts between the Sutlej and the Juma. The State entered into political relations with the British Government in 1809. The present Ruler is Lt Col His Highness Nawab Sir Ahmed Ali Khan Bahadur, G O I R, K C I S, who was born in 1881 and succeeded in 1908. His

was created Hony Major in the Indian Army in June 1916 and promoted to the rank of Lt. Col in December 1919

The chief products are cotton, sugar, poppy, muscad, mustard, ajwain, methi, tobacco, garlic, onions and all sorts of grains

The State maintains Bappers, Infantry, Cavalry and Artillery. The capital is Maer Kotla. The population of the town is 30,000. Annual revenue of the State is about 16 lakhs

Mandi is an Indian State in the Punjab Political Agency lying in the upper reaches of Beas River which drains nearly all its area. Its area is 1,200 square miles and it lies between 31°-23' North Lat. and 76°-22' East Long., and is bounded on the east by Kulu, on the south by Suket and on the north and west by Kangra. It has an interesting history of considerable length which finally resulted in its entering into a treaty with the British in 1846 A.D.

The present Ruler, Lieutenant His Highness Raja Joginder Sen Bahadur assumed full powers in February 1925. His Highness was married to the only daughter of His Highness the Maharaja of Kapurthala in February 1923 and was blessed with the birth of an heir-apparent in December 1923.

The Chief Executive Officer of the State is Rai Bahadur Dewan Dina Nath Bar at-Law who has been designated as His Highness' Chief Minister. Construction work of the Kangra Valley Railway has been completed and the line was opened for goods traffic on the 1st December 1926 and for passenger traffic on the 1st April 1927. The Railway line will prove of considerable importance in linking Mandi with the Punjab and will materially develop its trade. The work of the Mandi Hydro-Electric Project is in progress. This project when finished will supply electric power to practically the whole of the Punjab and will materially help in developing local industries.

The principal crops are rice, maize, wheat and millet. About three fifths of the State are occupied by forests and grazing lands. It is rich in minerals. The capital is Mandi founded in 1527 which contains several temples and places of interest and is one of the chief marts for commerce with Ladakh and Yarkand.

Nabha—Nabha which became a separate State in 1763 is one of the 8 Phulkian States—Nabha, Patiala and Jind—and though second in point of population and revenue of the 8 sister States, it claims superiority being descended from the eldest branch. It consists of two distinct parts: the main portion comprising 18 separate pieces of territory scattered among the other Punjab States and Districts forms the City of Nabha and the *Nizamat* of Phul and Amloh; the second portion forms the *Nizamat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana; this *Nizamat* of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about

1,000 square miles and has a population of about 3 lakhs. The State maintains one battalion of Infantry known as the Nabha Akali Infantry under the Indian State Forces Scheme consisting of 450. For the preservation of the peace there is also a Police force consisting of over 400 men.

The State is traversed by the main and 3 branch lines of the N.W. Railway and the B.B. & C.I. crosses the *Nizamat* of Bawal. A portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley, to facilitate trade the Durbar has opened grain markets and Banks near the principal railway station within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lac and gels, etc. There are some spinning factories and a cotton steam press in the State which are working successfully. In 1923 an inquiry was held into certain matters in dispute between the Patiala and the Nabha Durbars which showed that the Nabha Durbar had fabricated cases against persons connected with the Patiala State with the object of injuring them through the Patiala Durbar. As a result the Maharaja Ripudaman Singh who was born in 1885 and succeeded his father in 1911 entered into an agreement with the Government of India whereby he voluntarily separated himself from the administration and the control of the State was accordingly assumed by the Government of India. In consequence of repeated breaches of the agreement by the Maharaja, he was in February 1928 deprived of the title of Maharaja and of all rights and privileges pertaining thereto, and his eldest son, Partab Singh was recognized as Maharaja in his stead.

Patiala—This is the largest of the Phulkian States, and the premier State in the Punjab. Its territory is scattered and interspersed with small States and even unguo villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jaipur and Alwar States. Area 5,932 square miles. Population 1,499,739. Gross income Rs. one crore and thirty-five lakhs. Its history as a separate State begins in 1762. The present Ruler, Major-General His Highness Varan and I Khas Daulat-Istishia Maner ul Zaman Amir-ul-Umma Maharaja Dhiraaj Rajeshwar, Sri Maharaja-I-Rajgan Sir Bhupindra Singh Mohinder Bahadur, G.C.S.I., C.I.F. G.C.V.O., G.B.E., A.D.C. was born in 1891, succeeded in 1900, and assumed the reins of government in 1909 on attaining majority. His Highness the Maharaja Dhiraaj enjoys at present personal salute of 19 guns and he and his successors the distinction of exemption from presenting Nasar to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar cane, rapeseed, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Juma Canal distributaries. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam, Sirhind, Bhaini, Narnaul, etc. One hundred and thirty-eight miles of

broad gauge railway line comprising two sections—from Rajpura to Bhatinda and from Sirhind to Ropar—have been constructed by the State at its own cost. The North-Western Railway, the R I Railway, the B B & O I Railway, and the J B Railway traverse the State. His Highness maintains a contingent of two regiments of cavalry and four battalions of Infantry—one battery of Horse Artillery.

The State maintains a first grade college which imparts free education to all students. Primary education is also free throughout the State. The Durbar sanctioned a scheme of compulsory education in 1923.

Since the State has entered into alliance with the British Government in 1800 it has rendered help to the British Government on all critical occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N W F campaign of 1897. On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength, contributed substantially in money and material. Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the Frontier on the Staff of the General Officer Commanding and the Imperial Service Contingent saw active service towards Kohat and Quetta fronts. For his services on the N W Frontier His Highness was mentioned in despatches.

His Highness was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all

the different and principal fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments:—(a) Grand Cordon of the Order de Leopold, (b) Grand Cross of the Legion of Honour, France, and (c) Grand Cross of the Order of the Crown of Italy and (d) Grand Cordon of the Order of the Nile, (e) Grand Cross of the Order of the Crown of Roumania, (f) Grand Cross of the Order of St. Saviour of Greece (1926).

His Highness represented the Indian Princes at the League of Nations in 1925. In 1926 he was elected Chancellor of the Chamber of Princes (Narendra Mandal). He was re-elected Chancellor of the Chamber in 1927, 28, 29, 30. In 1930 His Highness led the Prince's delegation to the Round Table Conference.

Sirmur (Nahan)—This is a hilly State in the Himalaya under the Political control of the Agent to the Governor-General, Punjab States, Lahore. Its history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British, and during the second Afghan War he sent a contingent to the North West Frontier. The present Chief is Lieut.-Colonel H. H. Maharaja Sir Amar Prakash Bahadur, K.C.S.I., K.C.I.E., who was born in 1888 and succeeded in 1911. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugar cane crushing mills. The State supports a Corps of Sappers and Miners which served in the Great War. It was captured with General Townsend's force at Kut-al-Amara but the Corps was reconstituted and sent to service.

UNDER THE GOVERNMENT OF BURMA.

The States under this Government comprise the Shan States which are included in British India though they do not form part of Burma proper and are not comprised in the regularly administered area of the Province and the Karen States which are not part of British India and are not subject to any of the laws in force in the Shan States or other parts of Burma.

The Shan States comprise the two isolated States of Hsawngshup and Singaling Hkamti in the Upper Chindwin District under the supervision of the Commissioner, Sagaling Division, the eight petty village communities under separate hereditary Chiefs known as Hkamti Long in the Myittha District and the two main divisions of the Shan States known as the Northern and Southern Shan States numbering six and thirty-two States respectively which are under the Commissioner, Federated Shan States.

Hsawngshup with an area of 529 square miles and a population of 7,048 lies between the 24 and 25 parallels of latitude and on the 95 parallel of longitude between the Chindwin river and the State of Manipur.

Singaling Hkamti has an area of 963 square miles and a population of 2,287 and lies on the 26th and 26th parallel of latitude and longitude respectively.

The Hkamti Long States have an area of 200 square miles with a population of 6,520 and lie between the 27th and 28th parallel of latitude on the Upper Waters of the N branch of the Irrawaddy.

The Northern Shan States (area 20,156 square miles and population 592,812) and the Southern Shan States (area 36,167 square miles and population 347,518), form with the unadmini-

stered Wa States (area about 2,000 square miles) and the Karen State, a huge triangle lying roughly between the 19th and 24th parallels of latitude and the 96th and 103rd parallel of longitude with its base on the plains of Burma and its apex on the Mekong river.

The population consists chiefly of Shans who belong to the Shan group of the Tai Chinese family; the remainder belong chiefly to the Wa, Palaung and Mon Khmer groups of races of the Austro-Asiatic branch of the Austro family or to the Karen family which Sir George Grierson now proposes to separate from the Tai Chinese family. There are also a number of Kachins and others of the Tibeto-Burman family. The Shans themselves shade off imperceptibly into a markedly Chinese race on the frontier. Buddhism and Animism are the principal religions.

The climate over so large an area varies greatly. In the narrow lowlying valleys the heat in summer is excessive. Elsewhere the summer shade temperature is usually 80 to 95 Fahr. In winter frost is severe on the paddy plains and open downs but the temperature on the hills is more equable. The rainfall varies from 50 to 100 inches in different localities.

The agricultural products of the States are rice, pulses, maize, buckwheat, cotton, sesame, gum, groundnuts, oranges and pineapples.

Land is held chiefly on communal tenure but unoccupied land is easily obtainable on lease from the Chiefs in accordance with special rules for non-natives of the States. Great spaces of the States are suitable for cattle, pony and mule breeding and in the Northern States Chinese settlers appear to have found the latter a very paying proposition.

The mineral resources of the States are still unexplored. The Burma Corporation have a concession for silver and lead in the Northern States which they claim to be the richest in the world. The Mawson area in the Southern States is also rich in lead. Lignite and iron ore of a low grade are found in many places.

Lashio, the headquarters of the Northern Shan States District, is the terminus of the Myittha Lashio Branch of the Burma Railway (178 miles) and is also connected with Mandalay by a cart road.

The Burma Corporation's narrow gauge private railway track 45 miles long connects their Bawdwin mine with the Burma Railway system at Namgya.

The Southern Shan States are served by the Burma Railway branch line Thazi to Heho (87 miles) which has recently been extended to Tayaw in the Yawngwe plain.

Taunggyi, the headquarters of the Southern Shan States is connected with Thazi by a well graded motor road. The States vary much in size and importance. The largest State is Kengtung with an area of 12,400 square miles and population 208,761. The smallest State is Namkum with an area of 14 square miles and population 830.

Haipaw with an area of 4,400 square miles and population 131,410 is the richest State with a gross revenue of Rs 10,38,712.

The Sawbwas of Kengtung Haipaw and Yawngwe and Mongnai have salutes of nine guns while the Mong Mait Sawbwa has a personal salute of the same number.

Administration

Under the Burma Laws Act, 1908 the Civil, Criminal and Revenue administration of every Shan State is vested in the Chief of the State subject to the restrictions specified in the Sanad of appointment granted to him and under the same Act the law to be administered in each State is the customary law of the State so far as it is in accordance with justice, equity and good conscience and not opposed to the law in force in the rest of British India. The customary law may be modified by the Governor who has also power to appoint officers to take part in the administration of any State and to regulate the powers and proceedings of such officers. The Chiefs are bound by their sanads to follow the advice of the Superintendents appointed but subject to certain modifications which have been made in the customary law relating to criminal and civil justice have more or less maintained the semi-independent status which was found existing at the annexation of Upper Burma.

In 1920, Sir Reginald Craddock, Lieutenant-Governor of Burma, proposed a scheme for the sanction of the Secretary of State under which the Chiefs of the Northern and Southern Shan States have agreed to federalize the departments of Government in which they had been previously largely dependent on contributions from the Provincial Funds. Under this scheme no interference is contemplated in the internal management of the States and the Chiefs continue to collect their taxes and be responsible for law and order, maintain Courts for the disposal of criminal and civil cases, appoint their own officials and control their own subjects under the advice of the Superintendents. But the Federation is responsible for the centralised Departments of Public Works, Medical, Forests, Education, Agriculture and to a small extent Police. In place of the individual tribute formerly paid by them the Chiefs contribute to the Federation a proportion of their revenue which amounts roughly to the expenditure thereto incurred by them on the heads of administration now centralised while the Provincial Government surrenders to the Federation all provincial revenue previously derived from the States and makes an annual contribution to enable it to maintain its services at the same degree of efficiency formerly enjoyed. The Federation on the other hand pays a fixed proportion of its revenue to the Provincial Treasury as tribute in place of the individual contributions of the Chiefs. Under this scheme the Federation is a subsidiary of the Burma Government, is self-contained and responsible for its own progress. The Chiefs express their views on Federal and general matters through a Council of Chiefs consisting of all Chiefs of the rank of Sawbwas.

and four elected representatives of the lesser Chiefs. The Superintendents, Northern Shan States and the Commissioner of the Federated Shan States to whom the supervision of the Federation has been entrusted are ex-officio members of the Council. The scheme was sanctioned and brought into force with effect from October 1922. The first meeting of the Council of Chiefs was formally opened by His Excellency the Governor Sir Spencer Harcourt Butler, G.C.I.E., K.C.S.I., C.S., in March 1923.

Karenni

This district which formerly consisted of five States now consists of three as two have been amalgamated with others. It has a total area of 3,550 square miles and a population of 48,780. It lies on the south of the Southern Shan States between Siam and the British district of Toungoo. The largest State is Kantarawadi with an area of 3,000 square miles and a population of 36,021 and a revenue of nearly 1½ lakhs of rupees. More than half of the

inhabitants are Red Karens. An Assistant Political Officer is posted at Lohkaw subject to the supervision of the Superintendent, Southern Shan States, who exercises in practice much the same control over the Chiefs as is exercised in the Shan States though nominally they are more independent than their Shan neighbours. Mineral and forest rights however in Karenni belong to the Chiefs and not to the Government. In the past substantial contributions from Provincial revenues have been made to the Karenni Chief for education and medical service. The Chiefs are at present unwilling to surrender their special rights and join the Shan States Federation though very considerable advantages might accrue from their doing so.

The principal wealth of the country used to be in its teak timber and a large alien population was at one time supported by the timber trade. This has largely declined in the last few years and unless the Chiefs are prepared to deny themselves and lose their forests they will soon disappear.

UNDER THE GOVERNMENT OF ASSAM

Manipur—The only State of importance, under the Government of Assam is Manipur which has an area of 8,456 square miles and a population of 3,84,016 (1921 Census) of which about 80 per cent are Hindus and 21 per cent animistic hill tribes. Manipur consists of a great tract of mountainous country, and a valley about 50 miles long and 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, in the reign of Pamheiba or Garib Nawaz, who subsequently made several invasions into Burma. On the Burmese retreating, Manipur negotiated a treaty of alliance with the British in 1763. The Burmese again invaded Manipur during the first Burmese war, and on the conclusion of peace in 1826 Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja followed by the treacherous murder of the Chief Commissioner, Mr. Quinlan, and the officers with him, and the withdrawal of the escort which accompanied him. From 1891 to 1907 the State was administered by the Political Agent, during the minority of H. H. Chura Chand Singh. The Raja was invested with ruling powers in 1907 and formally installed on the throne in 1908. For his services during the War the hereditary title of Maharaja was

conferred on him. He is entitled to a salute of 11 guns.

The administration of the State is now conducted by H. H. the Maharaja assisted by a Durbar, which consists of a President, who is a member of the Indian Civil Service, his services being lent to the State by the Assam Government three ordinary and three additional members, who are all Manipuris. The staple crop of the country is rice. Forests of various kinds cover the great part of the mountain ranges.

Khasi and Jaintia Hills—These petty chiefships, 25 in number, with a total area of about 2,900 square miles and a population of 136,000, are included under the Government of Assam. Most of the States have treaties or engagements with the British Government. The largest of them is Khrim, the smallest is Nongliwal, which has a population of only 246. Most of them are ruled by a Chief or Siem. The Siemship usually remains in one family. The succession was originally controlled by a small electoral body constituted from the heads of certain clans but in recent years there has been a tendency to broaden the elective basis. The constitution of a Khasi State has always been of a very democratic character, a Siem exercising but little control over his people.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES.

The Central Provinces include fifteen feudatory States subordinate to the Government with an area of 31,080 square miles and a population of 2,067,871. One of the States, Makrai, lies within Hoshangabad District, the remainder are situated in the Chhattisgarh Division, to the different districts of which they were formerly attached. Their relations with Government are controlled by a Political Agent. The States vary greatly in size and importance, Sakhi, the smallest, having an area of 198 square miles and Bastar, the largest, an area of 12,062

square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in patents and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death, which require His Excellency the Governor's confirmation. But, as a fact, the Government has exercised a very large amount of control, owing mainly to the frequency with which the States have been taken under direct management, because of either the minority or the misconduct of the chiefs.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table—

State	Area	Population 1921	Revenue (approximate) in lakhs.	
			Sq Miles	Rs
Bastar	13,062	464,137	9	
Jashpur	1,963	154,156	3	
Kanker	1,429	124,928	4	
Khatnagarh	981	124,008	6	
Kandgaon	871	147,919	6	
Raigarh	1,426	241,634	6	
Surguja	6,055	378,226	5	
Eight other States	5,238	432,363	14	
Total	31,080	2,067,371	53	

Bastar—This State, in the south-east corner of the province, is the most important in the group. In area (13,062 square miles) it is the twelfth largest State in India, but the population in 1921 was only 464,137 and is very scattered and backward. A point of interest is that Bastar is the only State in India of which the Chief is a Hindu lady. She is the last descendant of an ancient family of Lunar Rajputs, which ruled over Warangal until the Mahomedan conquest of the Deccan in the 14th century A. D. when the brother of the last Raja of Warangal fled into Bastar and established a kingdom there. From then till the days of the Marathas the State was virtually independent its inaccessibility securing it from all but occasional raids of Mahomedan freebooters. The Bhonslas of Nagpur imposed a small tribute on Bastar in the 15th century, and at various times for delay in payment deprived it of the Sihawa tract in the Raipur district, and allowed the Raja of Jeypore in the adjacent Visagapatam Agency of Madras to retain possession of the Ktrapad tract, originally pledged to Jeypore by a Bastar Raja for assistance during family dissensions. The dispute between Bastar and Jeypore over this land led to constant border disturbances, and was not finally settled till 1865, when the Government of India, while recognising Bastar's claim, finally made the tract over to Jeypore on the ground of long possession, on condition of payment by Jeypore of Rs. 3,000 tribute, two-thirds of which was remitted from the tribute payable by Bastar. The present tribute paid by Bastar is Rs. 18,000 a year.

On the formation of the Central Provinces, Bastar was recognised as a Feudatory State. Since then the State has made steady, if slow, progress, hampered by the innate conservatism of its aboriginal population, which has from

time to time rebelled. The last rebellion, in 1910, was due to oppression by minor State officials and dislike of the rigorous forest policy then under introduction. After the rebellion the Raja had his powers reduced, and a series of Diwans was appointed by the Central Provinces Administration. The State has since his death continued to be under Government management, owing to the minority of Rani Profulla Kumari Devi, the present Chief. The present Administrator of the State is Mr. W. V. Grigson, I.C.S., of the Central Provinces Commission. He is assisted by two sub-divisional officers, a European Medical Officer, a State Engineer, a Superintendent of Police and a Forest Officer.

Nearly 11,000 square miles are covered by forest, of which about 3,000 square miles are reserved. Cultivation is therefore sparse. Rice and mustard are the chief crops. There is a large export of grain, timber and minor forest produce, particularly myrabolans. Most of the sal forest is leased to Messrs. Gillanders Arbuthnot for sleeper manufacture. The forest revenue in 1920 was about 3½ lakhs. The extension of the Salur branch of the B. N. R. to Jagdalpur and of the Raipur Forest Tramway to Kandgaon are under consideration. There are more than 600 miles of gravel motorable road in the State. The advent of the railway should lead to a great increase in the revenue of the State, and may lead to the exploitation of its great deposits of iron, manganese and tin. The revenue in 1920 was Rs. 9.5 lakhs, expenditure Rs. 10.1 lakhs and free closing balance Rs. 2.9 lakhs.

The capital, Jagdalpur, on the Indrawati River, has a population of 7,999 and is 184 miles by motorable road from Raipur in the Central Provinces and 210 from Visagapatam in Madras Presidency. The famous Chitrakot falls (97 ft. high) of the Indrawati are 23 miles from Jagdalpur.

Surguja—Until 1905 this was included in Chota Nagpur States of Bengal. The most important feature is the Mainpat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure, but according to a local tradition in Palamu, the present ruling family is said to be descended from an Arkel Raja of Palamu. In 1768 a Maratha army overran the State, and compelled its Chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century, in consequence of the Chief having aided a rebellion in Palamu against the British, an expedition entered Surguja, and, though order was temporarily restored, disputes again broke out between the Chief and his relations, necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness, but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Berar, and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramannil Saran Singh Deo, C.I.E., who succeeded to the gaddi in 1916 and enjoys full powers of a Ruling Chief.

JAMMU AND KASHMIR STATE.

The territory known generally as the Jammu and Kashmir State lies between 32° and 37° N and 75° and 80° E. It is an almost entirely mountainous region with a strip of level land along the Punjab Border, and its mountain valleys and lakes comprise some of the grandest scenery in the world. The State may be divided physically into three areas: the upper, comprising the area drained by the River Indus and its tributaries; the middle, drained by the Jhelum and Kishanganga Rivers; and the lower area, consisting of the level strip along the southern border, and its adjacent ranges of hills. The dividing lines between the three areas are the snow-bound inner and outer Himalayan ranges known as the Zaskar and the Panchal. The area of the State is 84,208 square miles. Beginning in the south where the great plain of the Punjab ends, it extends northwards to the high Karakoram mountains. "Where three Empires Meet."

Briefly described, the State comprises the valleys of the three great rivers of Northern India, viz., the upper reaches of the Chenab and the Jhelum, and the middle reaches of the Indus. The total population is 3,220,518 souls.

HISTORY—Various historians and poets have left more or less trustworthy records of the history of the Valley of Kashmir and the adjacent regions. In 1586 it was annexed to the Moghul Empire by Akbar, Sonagar, the Capital originally known as Pravarapura, had by then been long established though many of the fine buildings said to have been erected by early Hindu rulers had been destroyed by the Muslim invaders who first penetrated into the Valley in the fourteenth century. In the reign of Sikandar, who was a contemporary of Tamerlane, a large number of Hindus was converted to Islam. Jehangir did much to beautify the Valley but after Aurangzeb there was a period of disorder and decay and by the middle of the eighteenth century the Suba or Governor of Kashmir had become practically independent of Delhi. Thereafter the country experienced the oppression of Afghan rule until it was rescued in 1819 by an army sent by Maharaja Ranjit Singh. The Sikh rule was less oppressive than that of the Afghans. The early history of the State as at present constituted is that of Maharaja Shri Gulab Singh, a son of the old Ruling Family of Jammu who rose to eminence in the service of Maharaja Ranjit Singh of Lahore and was, in recognition of his distinguished services made Raja of Jammu in 1820. He held aloof from the war between the British and the Sikhs only appearing as mediator after the battle of Mubarak (1846) when the British made over to him the valley of Kashmir and certain other areas in return for his services in re-establishing peace. His son His Highness Maharaja Hanraj Singh, G.C.S.I., G.C.I.E., a model Hindu and one of the staunchest allies of the British Government ruled from 1857 to 1885. He did much to consolidate his possessions and give order in the frontier districts. He was succeeded by his eldest son His Highness Maharaja Sri Pratap Singh, G.C.S.I., G.C.I.E., who died on 23rd December 1925 and was succeeded

by His Highness the present Maharaja, Shri Harsingh Bahadur.

The most notable reform effected in the State during the reign of the late Maharaja was the Land Revenue Settlement originally carried out under Lawrence and revised from time to time.

ADMINISTRATION—For some years after the accession to the *gaddi* of the late Maharaja, the administration of the State was conducted by a Council over which the Maharaja presided. In 1903 this Council was abolished and the administration of the State was thenceforward carried on by His Highness the Maharaja with the help of a Chief Minister and a number of Ministers in charge of different portfolios. This system continued until the 24th January 1922 when an Executive Council was inaugurated. Very recently, certain modifications have been introduced in the Constitution as a result of which the contact of His Highness with the administration of the State has become more direct and intimate.

The British Resident has his headquarters at Srinagar and Sialkot and there is also a Political Agent at Gilgit. A British Officer is stationed at Leh to assist in the supervision of the Central Asian Trade with India which passes through Kashmir.

In the Dogras the State has splendid material for the Army which consists of 7,798 troops. Besides this thousands of Dogras serve in the Indian Army.

FINANCE—The financial position of the State is strong. The total revenue including jagirs, is about Rs. 2,70,00,000, the chief sources being land, forests, customs and excise and Sericulture. There is a big reserve and no debt.

PRODUCTION AND INDUSTRY—The population is pre-eminently agricultural and pastoral. The principal food crops are rice, maize and wheat. Oilseed is also an important crop. Barley, cotton, saffron, tobacco, beans, walnuts, almonds and hops are also grown. Pears and apples the principal fruits of the Valley, are exported in large quantities. The State forests are extensive and valuable. The principal species of timber trees are deodar, blue pine and fir. The most valuable forests occur in Kishtwar, Karnah and Kamraj Raqs. A survey of the mineral resources of the State is being conducted under an expert. The most noteworthy of the minerals are bauxite, coal, fuller's earth, kaoline, slate, zinc, copper and talc. Gold is found in Bakistan and Gilgit, sapphires in Paddar, aquamarines in Skardu and lead in Uri. The silk industry in Srinagar is the largest of its kind in the world. Manufacture of silk is a very ancient industry in Kashmir. Zain-ul-Abidin who ruled from 1421 to 1478 is said to have imported silk weavers from Khurasan and settled them here. Woolen cloth, shawl, paper, macki and wood carving of the State are world famous. The State participated in the British Empire Exhibition of 1924. The Kashmir Court was styled "The Gem Of The Smaller Courts" and attracted many visitors.

COMMUNICATIONS—Great efforts have been made and are being made towards the improvement of roads for wheeled traffic in the State. The Jhelum Valley road (194 miles) which links the Kashmir Valley with the Punjab and the North Western Frontier Province is considered to be one of the finest motorable mountain roads in the world.

The Banihal Cart Road, 205 miles long, which has recently been completed, joins Kashmir with the North Western Railway system at Jammu-Tawi and is also a fine motorable road.

Roads for pack animals lead from Srinagar, the summer capital of Kashmir, to the frontier districts of Gilgit and Ladakh. Internal village communications have also been much improved.

The Jammu-Suchetgarh Railway, a section of the Wazirabad Sialkot branch line of the North Western Railway system, is the only Railway in the State. The mountainous nature of the country has made the extension of the line into the heart of the State so far impracticable.

PUBLIC WORKS—In 1904 a flood spill channel above Srinagar was constructed to minimise the constant danger of floods in the River Jhelum and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the River Jhelum by dredging which has been taken in hand. It is interesting to know that dredging operations were once before carried out in the reign of Avantivarman (A.D. 855-863) by his

engineer Suyya near Sopore, with the same object. Good progress has been made with irrigation but the most important scheme of recent years has been the installation of a large Electric Power Station on the Jhelum River at Mahora which was completed in 1907.

EDUCATION—Of the total population of 3,359,527 excluding the frontier tracts where literacy is not recorded, there are 72,328 persons who are able to read and write, of whom 4,007 only are females. In other words, 26 out of every 1,000 persons aged five or more can read and write. Among males 46 in every 1,000 are literate. The number of educational institutions including two Arts Colleges and two technical institutes is 784 and is being steadily increased. In municipal areas education for boys has been made compulsory from 1929. Much progress has also been made in female education and two new girls' schools have been established during the year.

REFORMS—The most important reforms connected with the present Maharaja's reign have been the establishment of an independent High Court of Judicature modelled on British High Courts and the annual summoning of representatives from the provinces as a beginning of popular institutions in the State. Important legislative measures passed by His Highness Government in recent years include the raising of the age of consent to 14 for girls and 18 for boys and the *Agriculturists' Relief Regulation* meant to cope with the problem of rural indebtedness.

THE CHAMBER OF PRINCES

The Naradra Mandal, or Chamber of Princes came into existence with the earnest co-operation of a number of leading Princes themselves as one of the results of the Report on Indian constitutional reform presented to Parliament by Mr. Montagu, Secretary of State for India and H. E. Lord Chelmsford, Viceroy and Governor General of India, in 1919. The proposal was that the Chamber should exist as a permanent consultative body, with the Viceroy as President and the members composing the Chamber consisting mainly of the Princes and Chiefs having salutes, or whose membership might otherwise be considered desirable by the Viceroy. Certain smaller Chiefs were grouped and were given the privilege of nominating a member to represent them from year to year. The Chamber is a recommendatory body, which performs its functions under a constitution approved by the Secretary of State and it deals with questions submitted to it concerning the Princes and their rights and privileges generally and their position in Imperial affairs.

The Chamber was formally inaugurated by H.R.H. the Duke of Connaught on 6th February 1921. It meets regularly once a year and the agenda of subjects for discussion is framed and proposed by the Chancellor of the Chamber who at present is His Highness the Maharajah of Patiala. The Chamber selects by vote its own officers, who are the Chancellor, a pro-Chancellor to act for him in his absence out of India and a Standing Committee of the Chamber. This Committee considers before the annual meetings the subjects to be discussed at them.

Until 1929, the proceedings of the Chamber were considered as confidential and there was no admittance of the general public to its meetings. At the annual session in February 1929, the Princes passed a resolution by which all meetings were ordinarily made open to the public. The Chamber contains very restricted accommodation and admission has to be regulated according to the number of seats available.

Indian States' Tribute.

Many of the States pay tribute, varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory or settlement of claims between the Governments but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India —

States paying tribute directly to the Government of India

Tribute from Jaipur		26,667
" " Kotah		15,648
" " Udaipur		12,333
" " Jodhpur		6,538
" " Bundi		8,900
" " Other States		15,170

Tribute from Cutch		5,486

It was announced at the Coronation Durbar of 1911 that there would in future be no *Nasirana* payments on succession.

The Statutory Commission.

SUMMARY OF THE REPORT

The Indian Statutory Commission was appointed by Royal Warrant on November 26, 1927 its members are—

The Right Hon. Sir John Simon, B. CVO
M.P. (Chairman)

The Viscount Burnham GCMG, CH

The Lord Strathcona and Mount Royal

The Hon. E. C. G. Adgey, C.B., M.P.

The Right Hon. Vernon Harcourt, M.P.

Colonel the Right Hon. G. B. Lane Fox, M.P.

Major C. B. Atter, M.P.

The first part of the Report of the Commission was published on June 10th 1930 as Volume I surveys the existing conditions in India. The terms of reference and the procedure followed by the Commission in its inquiry are first explained. The Commission was appointed under the Government of India Act of 1919 for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions in British India and matters connected therewith, and of reporting as to whether and to what extent it is desirable to establish the principle of responsible government or to extend, modify or restrict the degree of responsible government existing therein including the question whether the establishment of a second Chamber of the local Legislatures is or is not desirable.

In an Introduction Mr. Montagu's declaration of British policy in the House of Commons in August 1917—the pronouncement which supplies the governing conditions for all schemes for India—is set out. In that declaration the policy of the British Government was laid down as the gradual development of self governing institutions with a view to the progressive realization of responsible Government in India as an integral part of the British Empire.

The rest of Volume I is divided into seven parts as follows—

PART I—THE CONDITIONS OF THE PROBLEM

This Part provides in a compendious form a statement as accurate and impartial as we [the Commissioners] can make of what India is—its vast size and varied population its complication of races and religions its social divisions its economic circumstances and its growing political consciousness. To this statement is added an account of the Indian States and of the Army in India, subjects which cannot so great an influence on the Indian problem as a whole and are so vitally involved in its future treatment."

PART II—THE EXISTING CONSTITUTIONAL STRUCTURE

In this section the essentials of the earlier Reforms are described the principles of the Reforms of 1919 are stated and the system set up in that year is explained.

PART III—WORKING OF REFORMED CONSTITUTION

The purpose of this section is explained by its title. It gives an account of the political developments since 1920 with a description of the non-cooperation movement and some notes on the Indian Press.

PART IV—THE ADMINISTRATIVE AND JUDICIAL SYSTEM

This Part includes an account of the functions and organization of the various administrative services as well as of various provincial services. It also includes a description and criticism of local self Government and an account of the minor administrations especially of the North West Frontier Province and Baluchistan.

PART V—THE SYSTEM OF PUBLIC FINANCE

This gives an account of the fiscal system as it is both in the Provinces and at the Centre, with a description of the nature and results of the 'Weston Settlement'.

PART VI—THE GROWTH OF EDUCATION IN BRITISH INDIA

The Commission explains that it is primarily concerned with education and its organization in relation to political and constitutional conditions and potentialities of progress.

PART VII—PUBLIC OPINION IN INDIA

In this Part the Commissioners briefly indicate their view of the extent of political consciousness in India and give an estimate of the forces at work in Indian public life. The volume also contains three maps.

VOL II FINAL RECOMMENDATIONS

In Vol II of the Report published on June 24 1930 the first principle which the Commissioners lay down is that the new constitution should as far as possible, contain within itself provision for its own development.

A consideration of what should be the ultimate goal of British policy in India in pursuance of the declaration of August 20 1917 leads the Commissioners to lay down a second principle. It is that any constitutional changes now recommended for British India must have regard to a future development when India is a whole not merely British India will take her place among the constituent States of the Commonwealth of Nations united under the Crown.

Having declared that a glance at the map of India will show how closely the States and British India are interwoven the Commissioners continue. It is one of the great causes of British rule in India that it has brought a peace and unity hardly ever before known in the peninsula and has substituted for a congeries of warring States a single India united by a common allegiance to the Crown although one part only is directly under British rule.

The Commissioners point out that economic forces are such that the States and British India must stand or fall together, and they call attention to the effect on the States

of the adoption, at the wish of the Central Assembly, of an extended protective tariff.

This body legislating professedly only for British India has in effect imposed indirect taxation on the inhabitants of the States. As the States themselves have their own tariff policies there is a serious possibility that unless provision can be made for the reconciliation of divergent interests, numbers of tariff walls will be perpetuated in an area where fiscal unity is most desirable.

There is the still more fundamental point that there are few subjects which should form the field of activity of a Central Government in India which do not, in fact, interest also the Indian States. An outstanding example is that of defence. Others are communications and important social matters such as the prevention of the spread of epidemics.

The Ideal of Federation.—The Commissioners declare that if the principle they have laid down is valid, it inevitably follows that the ultimate constitution of India must be federal for it is only in a federal constitution that units differing so widely in constitution as the provinces and the States can be brought together while retaining internal autonomy. This, they say, is recognised in the Montagu Chelmsford Report. They also quote the following pronouncement made by the Maharaja of Bikaner to the Legislative Assembly of his State on December 19, 1929—

"I look forward to the day when a United India will be enjoying Dominion Status under the sceptre of the King Emperor and the Princes and States will be in the fullest enjoyment of what is their due—as a solid federal body in a position of absolute equality with the federal provinces of British India. However distant that may be the Commissioners declare, we desire in our proposals to do nothing to hinder but everything to help its arrival for already there are emerging problems that can only be settled satisfactorily by cooperation between British India and the States."

The Report goes on—It might be possible to visualize the future of federation in India as the bringing into relationship of two separate federations, one composed of the elements which make up British India, the other of the Indian States. We do not wish in any way to be dogmatic on a matter which must be decided by those concerned. While we have given much attention to the subject we have not received evidence from the Rulers of the Indian States. We recognize that it is one of the matters which may be discussed when the proposed conference takes place.

Units of Federation.—In considering the constituent elements out of which the federation of British India is to be built, the Commissioners point to an initial difficulty.

"Federation schemes (they say) usually start with a number of clearly defined States each already possessed of individuality and consciousness whereas in India there are only a number of administrative areas which have grown up almost haphazard as the result of conquest, supersession of former rulers, or administrative convenience."

The present provinces cannot be regarded as in any way ideal areas for self government. Therefore, in spite of the difficulties encountered in all attempts to alter boundaries and the administrative and financial complications that arise, the Commissioners make a definite recommendation for "reviewing and if possible resetting, the provincial boundaries of India at as early a date as possible. Meanwhile, the provinces of India exist and form the basis on which a federal structure must be built."

There is however one province, to day an integral part of British India which should, the Commissioners think be definitely excluded from the new policy. That is Burma.

As the Montagu Chelmsford Report pointed out Burma is not India. Its inclusion in India is a historical accident. We think that when an endeavour is being made to lay down the broad lines of advance towards an ultimate goal, the opportunity should be taken to break a union which does not rest on common interests. The reasons for this conclusion are developed in Part VI which also contains some remarks upon the future constitution of Burma.

What is needed, the Commissioners say is a central organ which can at once take up the work of British India so far as this does not devolve on the provinces, but which at the same time is capable of expansion into a body representative of All India in the wider sense.

If the ideal to be aimed at (the Report goes on) is a federation to which the Indian States will one day adhere the process of evolution in British India towards provincial autonomy in matters of Internal Government must be thoroughly carried out. The union of constituents such as the Indian States with the provinces of India the former autocratic and the latter democratic, necessarily involves giving the greatest possible internal freedom to the federal units. It is, we think abundantly clear that it is only on such terms that there could be hope of achieving the unity to threaten India. The Central Government becomes on such a theory, an association of units formed mainly for the purpose of performing certain functions on behalf of all."

Fundamentals of Government.—The last principle which the Commission lays down is the paramount necessity of securing that throughout the period during which India is progressing on the road to complete self government there must be full provision made for the maintenance and efficiency of the fundamentals of Government.

However much we may subscribe to the doctrine that good Government is no substitute for self Government, the Commissioners declare, we must ensure that we do not put forward proposals that will permit of Government being replaced by anarchy. It must be recognized that there are grave dangers in the situation of India that must be provided for.

Whenever there has been wanting in India a Government strong enough to defend itself, invasion through the gateway of the North-West has occurred. It is an "absolute con-

dition' for the development of self Government in India that the gateway should be safely held. The Report says:—

'The Army in India must be strong enough for its task. We hold that for many years the presence of British troops, and British officers serving in Indian regiments will be essential. It would be idle to deny that this fact gravely complicates the problem of the introduction of an increasing measure of responsibility into the Central Government but we believe that the proposals which we put forward for consideration with regard to the status of the Army in India would reconcile the demands of security and of advance.

Internal Order—If the external menace to India's peaceful development is serious, the possibilities of internal disturbances are not less grave.

The Commissioners also state that until the spirit of tolerance is more widespread in India and until there is evidence that minorities are prepared to trust to the sense of justice of the majority, there is indeed need for safeguards for minorities and they consider that the only practical means of protecting the weaker or less numerous elements in the population is by the retention of an impartial power residing in the Governor General and the Governors of provinces to be exercised for this purpose.

The Governors Provinces—In Part II the Commissioners formulate their views on the need for change in the system in the Governor's Provinces and their suggestions, as to the direction which those changes should take.

First, they deal with the size and shape of the provinces. The existing provincial boundaries in more than one case embrace areas and peoples of no natural affinity, and sometimes separate those who might under a different scheme be more naturally united. But it is manifestly impossible to recommend a redrawing of the map of India according to some new pattern. In case of Orissa and Sind are mentioned in particular. Not but not all, of the Orissa speaking people are now included in Orissa, and so close a union as now exists between Orissa and Bihar is a glaring example of the artificial connexion of areas which are not naturally related. As for Sind, the Sindhis are both racially and geographically completely separated from the rest of the Bombay Presidency. These cases however, are only prominent examples of a class of question which arises at many points when provincial boundaries are considered. The Commissioners, therefore propose—and they regard it as a matter of urgent importance that the Government of India should set up a Boundaries Commission with a neutral chairman which would investigate the main cases in which provincial readjustment seems called for.

In the meantime, taking the boundaries as they are, the Commissioners turn to the question of provincial constitutional reform. Practically every witness and every document dealing with the question recommends a change. The Report says:

'Indian political thought, which is much given to general conceptions and is not always very definite on the essentials of constructive method, tends to regard the present constitution of the provinces as a temporary expedient which should now give place to "provincial autonomy"—a phrase which is constantly used not to indicate the throwing off of all central control so much as the ending of dyarchy and the creation of a Ministry responsible to the Provincial Legislature in respect of all provincial subjects.

The division of Governmental functions has led to a blurring of the boundary lines of responsibility, and it is as soon as well as a natural instinct which leads so many of India's public men to call for a further change.

Each of the eight Provincial Governments which responded to the Commission's request for a statement of views suggests a somewhat different solution—but they all agree that something should be done. The suggestions of the Provincial Committees and the Indian Central Committee were similarly varied.

The views of the Commission—in the presence of this multitude of counsel and as the result of our own observation and reflection—are stated as follows:—

The working of the existing system in the different provinces has not led everywhere to the same results and a diversity of advice naturally proceeds from those who are considering the question primarily in respect of their own province. But it is extremely undesirable that the new Statute should make different provisions for different provinces, not only because this will lead to jealousy and heart-burning but because such a mode of treatment makes inevitable a repetition of inquiries at close intervals in order to see whether the situation has again changed and what further modifications are called for. Moreover it would be a very bold assumption to imagine that anyone of any race, could settle now in every detail the way in which provincial Government should work out in the future.

The right method we are convinced is to construct a constitutional framework into which all the provinces can fit but which will leave enough latitude for adjustment to the needs of the individual case, and which will enable the constitutional progress of provincial Government to be secured by the healthy method of growth rather than by artificial statutory jumps. There must be sufficient provision in the statutory outline for the essential constitutional structure to be clearly defined, but this is perfectly possible without finding in the statute itself a code of rigid regulations covering every detail in which one province may need slightly different arrangements from another or in which the same province may need adjustments in detail from time to time.

Nothing is more striking, when one compares the statutory provisions for the provinces of India with, for example, the statutory provisions for the provinces of Canada, than the extent to which in the former case the Act of Parliament and the rules made under it elaborate a detailed scheme, precise in almost every

particular, while the British North America Act of 1867 left so much to be implied and to grow. Analogies are particularly dangerous in the case of India where so many of the governing considerations are unique. We are far from suggesting that the conditions are parallel but the contrast brings out the point we wish to make.

Of the difficulties of dyarchy the Commissioners say—

There has been much useful work done under this system, and the criticism we have felt bound to make where it has failed to produce good results are not at all intended to deny the degree of success which it has sometimes attained. Dyarchy as a training ground has this to its credit, that it has brought home to some who had no previous experience of the task of Government the difficulties of administration and the meaning of responsibility. But it seems to us clear that a system which was designed to develop a sense of responsibility has sometimes tended to encourage a wholly different attitude. As long as dyarchy continues it is inevitable that the elected members of the Legislature should tend to show an exaggerated hostility to the work of the reserved half of the Government which they may criticize but cannot control. If money is wanted for 'nation-building' services, the temptation to blame reserved departments for spending too much is far more attractive than the alternative course of imposing new taxes. And if new taxes are imposed, where is the guarantee that the proceeds would be devoted to the purpose intended?

Relations between Executive Councillors and Ministers are we believe intimate and friendly. But rigid dyarchy is a standing challenge which either ranges Ministers against the reserved half of Government or exposes them to the charge of being the subservient tools of the bureaucracy. And all the time the growth of real responsibility (which was the object of the adoption of the system) is being hindered.

The Commissioners propose therefore, that the 'rigid division into reserved and transferred subjects should disappear.

Powers of Governor—The Report discusses the vital question whether the Governor is to be in the position of a strictly constitutional Governor bound to accept in all circumstances the joint advice of his Ministry or, on the other hand, whether he should have in reserve the theoretically unrestricted powers of overruling them, which he now possesses *vis-à-vis* his Ministers (or the nearly equally unrestricted powers which he possesses of overruling his Executive Council). The Commissioners consider it of great importance that the answer to this question should not be left in doubt. Constitutionally speaking, they declare 'a middle course must be rejected. The Governor should, on the administrative side be given statutory power to direct that action should be taken other wise than in accordance with the advice of his Ministry (though subject always to the superintendence, direction and control of the Governor-General) only for certain purposes.

Two of these are fundamental to the preservation of the peace and good Government of the province.

The Report continues—

"We are not attempting to settle the draft clause but we should be disposed to describe these two as matters in which the Governor's opinion he must give such directions—

(1) In order to preserve the safety and tranquillity of the province or

(2) In order to prevent serious prejudice to one or more sections of the community as compared with other sections.

There are three other purposes for which the Governor should possess overriding powers, namely—

(3) To secure the due fulfilment of any liability of Government in respect of items of expenditure not subject to the vote of the Legislature

(4) To secure the carrying out of any order issued by the Provincial Government from the Government of India or the Secretary of State

(5) To carry out any duties which may be statutorily imposed on the Governor personally such as duties in connection with some service questions and responsibility for backward tracts

Law and Order—In discussing the problem of law and order the Commissioners admit that the proposal that Police should cease to be a reserved subject is a focus of controversy. It would be a great injustice to dismiss as mere bureaucratic prejudice the view of the many experienced administrators who—as well as important bodies of non-official opinion—hesitate to give their support to the proposal. The Commissioners therefore state with fulness and candour 'the reasons which have led so many men with experience of India to advise against the step.

Law and Order is the first interest of every Indian citizen, whether in town or country. The time has come when it ought to be no longer possible to represent, or to misrepresent the agents of authority who are so industriously supplying the first need of civilized existence as the minions of an alien bureaucracy. As things are the police-man in his red *pagri*, the village *thana*, and the whole hierarchy of the Force tend to be regarded as the embodiment of all that the Indian politician criticizes and declaims against. It is not a sufficient answer to say that the declaration is sometimes extravagant and that the criticism is often irresponsible. The real question is what is the future which we contemplate when things have got to this point, if the present arrangements for the Police remain unaltered? A continuation of the present situation leads nowhere. It is for these reasons that we have become convinced that the bolder course is also the wiser course and that, while making available the experience and guidance which will be needed, and preserving the safeguards which common sense dictates, we should provide that the department of Law and Order is to be no exception to the general rule of provincial responsibility.

Larger Councils Proposed—In their description of the changes which they consider desirable in the Provincial Legislatures, the Commissioners say it is of great importance that such changes as are made should be made in such a way as will not require constant revision hereafter and above all will not necessitate the fixing in advance of some future date for a further inquiry. They dissent altogether from the suggestion made in the Montagu-Chelmsford Report that after the Statutory Commission has finished its work further inquiries into the working of the Indian constitution should be fixed to take place at intervals of 12 years. What is now needed, they say is a remodelling of the provincial constitution on lines which will give it a reasonable chance of natural and healthy growth without threatening it in advance by a further inquiry. The Commissioners add—

'It is proposed that in place of the existing maximum term of three years the normal statutory life of Provincial Legislatures should be five years. The Commissioners are definitely of opinion that generally speaking the size of the present Legislative Councils is too small. It is hoped that the result of any redistribution which is decided upon will be to reduce the average size of the Governors' provinces, but meantime the Commission has to deal with things as they are. It is suggested that an immediate increase in the number of members in the case of the more important provinces to a figure of between 200 and 250 might be sufficient for the present.

Of the highly controversial and most important subject of communal representation the Report says—

"On the one hand communal representation—the provision by law that a particular religious community shall be represented in a popular Legislature solely by members of its own body with a guarantee as to how many communal seats there shall be—is an undoubted obstacle in the way of the growth of a sense of common citizenship. It is open to all the objections formulated in the Montagu-Chelmsford Report. On the other hand we are now faced as the authors of the Montagu-Chelmsford Report were faced by the indisputable fact that the Mohammedan community as a whole is not prepared to give up communal representation and would regard its abolition without the assent of that community not only as the withdrawal of a security which it prizes but as a cancelling of assurance upon which it has relied. What ever view may be taken of the Mohammedan objection the fact itself cannot be disputed and it is one of the greatest possible gravity for all who are engaged in considering the constitutional future of British India.

Communal representation is a very thorny question and one as to which there cannot be said to be anything approaching agreement in India to-day. The subject is pre-eminently one which the rival communities should settle among themselves. But in the absence of a new agreement between Hindus and Mohammedans, the Commissioners are unanimous in holding that communal representation for the Mohammedans of a province must be continued and that Mohammedan voters could not be

deprived of this special protection until a substantial majority of Mohammedan representatives in the Provincial Legislature declared themselves in favour of the change. Later the Commissioners say—'But no third party, however friendly and disinterested, can do what the two communities might co-operate in doing for themselves by mutual agreement. In the absence of such agreement we are compelled to assume in reference to this matter a continuance of separate communal electorates. So long as Mohammedans have separate electorates in the provinces it is impossible to deny to the Sikhs of the Punjab similar treatment if this is what they desire.'

The Commissioners consider that there is no need to continue to reserve seats for non-Brahmins in the Madras Presidency and they incline to the opinion that the time has not yet come for the abolition of reserved seats for Mahatras in Bombay.

The question whether the depressed classes should have separate electorates is discussed. The Commission decides against such a method of treatment. A separate electorate would mean a precise definition of all who are covered by the term thus stigmatising each voter in the list and would militate against the rise of those who are depressed to a higher level.

As a solution the Commission proposes that there should be some reservation of seats for the depressed classes. The number of seats to be reserved for depressed class candidates in non-Mohammedan constituencies should be settled on the following principle: the proportion of the number of such reserve seats to the total number of seats in all the Indian general constituencies should be three quarters of the proportion of the depressed class population to the total population of the electoral area of the province.

Suggestions are put forward regarding the representation of other special classes and interests—Europeans, Anglo-Indians, Indian Christians, universities, commerce and planting, labour, etc. European representation the Report says must continue to be secured by means of separate electorates. The Commissioners say they have made careful inquiries with regard to making adequate arrangements for the representation of labour employed in large scale industry in various parts of India but no ready made solution is available. The best suggestion they can make is that in every province the Governor should have the duty of drawing up rules for securing labour representation. The Commission expresses an opinion in favour not only of maintaining but increasing labour representation if suitable members are available.

Women Members—Although in seven provinces out of nine it is possible for women to be members of the Councils and several women have in fact been made members by nomination no woman candidate so far as the Commission knows has ever been elected. The Report discusses various methods of facilitating the inclusion of women in the Provincial Councils. The Commissioners are opposed to the methods of stipulating by Statute or statutory rule that a certain number

of seats in each Council must be held by women. It is equally impracticable and undesirable, in their view to propose that a certain number of seats should be reserved for women. They consider that the proper course is to leave to women candidates a fair field and no favour. The only provision which the Commissioners think should be made to encourage the presence of women in the Provincial Legislatures is to provide by statutory rule or otherwise that the Governor in exercising his powers of nomination should have special regard to the extent to which women have been returned as members from general constituencies with a view to supplementing their number if he thinks this should be done.

The Franchise—About 2.8 per cent of the population of the areas returning members to the Provincial Councils were registered as voters at the last General Election. The present franchise in the view of the Commission is too limited in its scope to provide the material from which to build any adequate scheme of representative Government. Its only justification is that it was a beginning and that in spite of the mandate that a broad franchise should be aimed at illiteracy and the restricted supply of competent persons to conduct the elections compelled the adoption of limits producing this result. The Commission holds that there should now be such extension of the franchise as is reasonably practicable and that provision should not be made with a view to yet greater extension after a further interval.

Second Chambers—After considering the question of second Chambers in the provinces with very special care the Commission has now found it possible to make a unanimous recommendation one way or the other. The Montagu-Chelmsford Report presented the rival sets of argument and decided at that time against bi-cameral institutions for the Provinces but suggested that the question should be further considered by the periodic commission which it proposed. The Commissioners now say that the considerations set forth by the Montagu-Chelmsford Report are those which appeal to them most whichever view they hold.

The North West Frontier Provinces—The Commissioners have come to the conclusion that responsibility for the administration of the five districts which constitute the North West Frontier Province cannot be separated from responsibility for the peace of, and control over the tribal area beyond. Only thus they say, can the security of the North West Frontier be effectively maintained.

With regard to Baluchistan the Report states that the customary law and method of government associated with Jirgas could not be supplanted without gravely disturbing local sentiment and removing an effective and suitable means of consulting local opinion. It is proposed that British Baluchistan should have some representation in the Central Legislature, but the Commissioners are confident that there is no ground for recommending a change at this stage in the government of the province.

The Council—Part IV is divided into chapters which deal with the Central Legislature, the Governor General in Council, the

influence of the Central Legislature on executive action and policy relations between the Central and the provinces, and the authority of Government.

It is proposed that, in place of the present Legislative Assembly there should be constituted a new body, which the Commission would call the Federal Assembly the members of which would not be directly elected by constituencies of voters but would be mainly chosen by the Provincial Councils themselves. The parts of British India which cannot be included within the areas covered by the Provincial Councils would also be represented in the Federal Assembly.

The Commission recommends that the number of members in the Federal Assembly should be between 250 and 280. In the present Assembly there are 145 members. The number now recommended would give approximately one member per million inhabitants.

There are weighty reasons, according to the Commission, for retaining the Council of State as an integral part of the Central Government and it is therefore proposed that the Council should continue with its existing powers as a body of elected and nominated members chosen in the same proportions as at present.

The existing legislative and financial powers of the two Chambers of the Central Legislature will remain as at present, but additional functions will be performed by the Federal Assembly in the sphere of finance. The Commissioners say that as the future constitution of India develops there will they conceive, be a gradual alteration in the range of duties to be performed by the Central Legislature. While the immediate changes are not great, there are future possibilities which may be far reaching.

A Provincial Fund—The Commissioners accept and fully endorse the general principles of the scheme of the Financial Amendment Act in Part VIII—for the division of resources in British India between the Central and Provincial Governments. They are persuaded that the scheme suggested for the constitution of a Provincial Fund offers the most satisfactory means of ensuring adequate resources to the provinces without infringing their autonomy.

The power of initiating measures of taxation for central purposes will, as heretofore be vested exclusively in the Executive, but all such measures must be passed by the Federal Assembly and also by the Council of State. Both bodies have full power to amend or to reject any such measure, but the present provision would continue that where the Governor-General considers that its passing is essential for the safety, tranquillity or interests of British India or any part thereof, he may certify the measure, which thereupon has all the force of law. As regards the voting of the Estimates, the division between votable and non-votable charges will remain as at present. The Assembly has full power to reject or to make "cuts" in the votable items of expenditure, but the Governor-General in Council has power to restore such demands where he considers they are essential to the discharge of his responsibilities. The Commissioners propose no alteration in this regard.

It is proposed that the legislation necessary for the imposition of taxes assigned to the provinces for the purposes of the Provincial Fund should be passed by the Federal Assembly sitting in special session. The Finance Member of the Central Government would formally introduce the necessary measures. The Report continues —

But it is of the essence of this plan that the proposals for raising additional taxes should emanate from the provinces. We therefore suggest that there should be an Inter Provincial Financial Council which would be summoned by the Finance Member and attended by all the Ministers of Finance of those units of federation which would be entitled to draw on the funds.

We propose that the Provincial Fund should be distributed among the units of the Federation, i.e., both provinces and excluded areas, on the basis of population.

The Governor-General.—The Commissioners declare that it is therefore clear that whatever shape the Government of India may hereafter assume, its formation ought to be such as to secure its internal unity. They then turn to the position of the Governor General and they say —

A second conclusion on the subject of the Central Executive which can be asserted with confidence is that the Governor General must continue to be not only the representative of the King Emperor in all formal and ceremonial matters, but the actual and active head of the Government. We have described in our former volume the range and importance of his present functions and it appears to us evident that in the next stage of India's constitutional evolution this range will not be narrowed and its importance will not decrease. Indeed as has already appeared in our chapter on the Provincial Executive, there are cases in which we think responsibility should be placed on his shoulders which is at present constitutionally discharged by the Governor-General in Council. The question of future relations with the Indian States suggests another instance of the same sort. The influence, advice, and direction of the Viceroy for the time being will certainly be needed for many years to come if the constitutional progress of India is to be successfully promoted.

One change which we think should now be made is to place upon the Governor-General himself the responsibility of selecting and appointing the members of his Cabinet. At present, members of the Governor-General's Executive Council are appointed under the advice of the Secretary of State by warrant under the Royal Sign Manual, and the Secretary of State, in making recommendations is of course largely guided by the Governor-General's advice. But there is a real difference between this situation and the constitutional position which we seek to get established. Under the new plan, the Governor-General would of course remain subject to the superintendence and control of the Secretary of State but apart from this the choice of colleagues would rest with him in theory, as it now usually does in fact.

The Executive Council.—The Government of India Act enacts that three at least of the members of the Governor-General's Executive Council must be persons who have been for at least 10 years in the service of the Crown in India. The Commissioners are by no means disposed to suggest that the time has come to dispense with this provision, but they think that it, and any similar directions as to number or qualifications of the Governor-General's Council, should be expressed not, in the Statute itself but in statutory rules made under the Statute. Such rules would, therefore, be subject to alteration without the necessity of passing a new Government of India Act, though any alteration of rules on this subject must have the approval of both Houses of Parliament expressed by resolution.

It does not seem to us possible (the Commissioners declare) to take the view that Parliament can now surrender all responsibility for future modifications in the structure of the Central Government of India. To suggest that it could do so would be to deny the terms of the Preamble to the Government of India Act, and to forget the conditions included in Mr. Montagu's declaration of August 20 1917. But this recognition of continued Parliamentary responsibility is a very different thing from insisting that no modification is possible in the future without the cumbersome procedure on each occasion of passing a new Statute through the British Parliament. We desire to reduce the rigidity of the statutory structure because we are convinced that Indian institutions ought to be given room to grow and develop. While therefore it is impossible in our judgment, to provide at this stage as much latitude for change in the central sphere as in the provincial constitution we propose by the means we have described to provide in the central sphere also opportunities for adjustment while preserving to Parliament the responsibility, which it cannot at present abandon for future decisions.

The Commander-in-Chief.—In practice a Member of the Governor-General's Council and thus necessarily a member of one or other chamber of the Indian Legislature with the right of attending in and addressing the Chamber to which he does not belong. In the view of the Commission the Commander-in-Chief should not be a Member of the Executive Council and should not sit in the Legislature. "His immensely important and onerous duties are better discharged outside it. Questions of defence so far as they come before the Indian Legislature, should be dealt with by a civilian. The Army Secretary would be available but on occasions of the first importance the task would appropriately fall upon a new Member of the Viceroy's Executive Council whom the Commissioners would describe as the "Leader of the Federal Assembly".

The Commissioners think it "very desirable that there should be included in the Governor-General's Council a Member, not overburdened with departmental work, whose primary function should be to lead the House." This duty at present usually falls upon the Home Member. "A heavily burdened permanent official."

Defence and Security.—Part V is entitled *The Constitutional Problem in Relation to the Defence of India.* In the North West India is exposed to a constant and pressing danger of a magnitude which is quite without parallel in any other part of the Empire. The Commissioners say that the evidence they have heard and what they have seen in the course of their Indian tours leave no doubt in their minds that at least for a very long time to come it will be impossible for the Army entrusted with the task of defending India to dispense with a very considerable British element, including in that term British troops of all arms, a considerable proportion of the regimental officers of the Indian Army and the British personnel in the higher command.

The issues involved are too vital and the practical difficulties too great the Commissioners consider, to justify a precipitate embarkation on a wholesale process of substituting Indian for British personnel in the Indian Army. The Army in India is the only effective barrier between India and the dangers without her gates. We regard it as beyond question that having regard to the Indian and Imperial interests involved, to the dangers to be faced and to the composition of the force, Parliament cannot wash its hands of all responsibility for this Army. Nor do we see how in that event, British officers and men could be recruited and called on to serve in India. The Report further declares—

There is, therefore a dilemma. The declaration of August 20, 1917 stands in its full implication, the British people and the British Parliament have not thought of going back on it yet here is the difficulty, which appears almost insurmountable, arising from the continued presence of the British element in the Army in India. It is impossible to relinquish control over an Army containing this element to Ministers responsible to any elected Legislature. Such a transfer could only take place when no part of the Army in India consists of British officers or troops recruited by the Imperial Government. When this will come about we cannot say but we see no prospect of its happening for very many years.

Moreover, to any who are tempted to question this judgment or to regard it as unduly harsh we would point out a second consideration. At the present moment no Indian holding the King's commission is of higher army rank than a captain—there are we believe, 39 captains of whom 25 are in ordinary regimental employ. None of them are of an age which would prevent their attaining much higher rank even if they passed the necessary examination, before retirement. A Higher Command cannot be revived at short notice out of the existing cadres of Indian Officers, all of junior rank and limited experience.

In the sphere of internal security also the necessity for the presence of British troops, who are the neutral guardians of a peace so frequently assailed in recent years by bitter communal feuds and sectional commotions, raises another difficulty. It appears to the Commission that it would be quite impossible

to contemplate the use of British troops to quell civil disturbances at the unrestricted bidding of Ministers popularly elected and answerable to popularly elected Legislatures. Yet another difficulty which cannot be overlooked is that it is impossible for the Crown upon whom the Indian States rely, to lose control of the instrument by the use of which in case of need the obligations of the Crown towards the States could be discharged.

Cost of the Army.—The cost of the Army in India is borne by the Indian taxpayer and paid out of central revenues. It amounts at present to no less than 55 crores of rupees, equal to about £41,000,000 per annum. As the whole Customs revenue of British India amounts to just over 50 crores, it may be said that the receipts from Customs almost pay for the Army. Much discussion arises in India from time to time as to whether it is equitable for India to find so large a sum for its purpose, and this discussion revolves round the question: What is the Army in India really for? The objects for which the Army in India exists, says the Commission are the defence of India against external aggression and the maintenance of internal order. Its strength is not more than is calculated to be necessary for meeting the emergencies of internal disorder and the possibilities of external attack. The Commission subjects the considerations of cost and frontier defence to close analysis and says the result seems to it to be as follows—

India and Britain are so related that Indian defence cannot now or in any future which is within sight be regarded as a matter of purely Indian concern. The control and direction of such an Army must rest in the hands of agents of the Imperial Government. Nor does it necessarily follow from this that further progress towards the realisation of responsible government in British India is barred until the work of defence can be adequately discharged without the help of British officers and British troops? As things are, there is a block on the line of constitutional advance.

The question is whether there is any other mode of treatment open which would provide adequately for the needs of Indian defence and at the same time offer an earlier prospect for some further constitutional advance at the centre. It seems to us that the only possible method would be to recognize that the protection of the frontiers of India, at any rate for a long time to come should not be regarded as a function of an Indian Government in relation with an Indian Legislature but as a matter of supreme concern to the whole Empire which can only be effectively organized and controlled by an Imperial agency.

Conditions of Settlement.—A solution based on this principle would probably have to be brought about by a definite agreement between India and Great Britain acting on behalf of the Empire. Many points would have to be settled, and we can only indicate the general lines that might be found to be practical. Such a scheme assumes that the forces composing the existing Army in India would no longer be under the control of the Government of India, but would be under

an Imperial authority which would naturally be the Viceroy acting in concert with the Commander in Chief. It would involve an undertaking by the Imperial authorities of the obligations of Indian defence in return for the continued provision of definite facilities as to recruitment, areas transport, and other matters. And, of course, it would involve an equitable adjustment of the burden of finance which we attempt to provide, but which would do not perhaps most naturally take the form of an agreement to provide from Indian revenues an annual total sum, subject to revision at intervals, and with the opportunity of sharing in economies. The contribution would be non-votable. So far, we are dealing with ordinary Army expenditure. In the case of extraordinary or war expenditure there is a broad distinction between the cost of expeditions or operations which are the result of tribal activities and must be considered a normal incident of the Wardenship of the Marches and exceptional expenditure rendered necessary by the organised attack of a foreign Power. In the former case the charges should we think fall entirely (as hitherto) on Indian revenues while we feel that the circumstances may be such in the latter instance as to make a case for spreading the financial burden more widely. If such an agreement could be reached the block to constitutional advance in India which this problem of defence now presents would no longer stand in the way.

If the responsibility for the Army in India is to rest with the Imperial Government that Government would continue to be represented in India by the Governor General, and the day by day administration of the Army would be, as now, in the hands of the Commander in Chief. The latter would however cease to be a member of the Indian Legislature and while he remained a colleague of the Governor General he would cease to be the holder of a portfolio in the Government of India. The Central Legislature, as now would not vote supply for the Army appropriations of revenue for this purpose would be authorized by certificate of the Governor General. But we should like to see the constitution of some Committee on Army Affairs on which the Central Legislature—and in time, we hope the Indian States also—would have representatives for the purpose of discussing and keeping in touch with military questions.

The Commission considers that the obligation to go forward steadfastly and sympathetically with the Indianization of the Army should continue to be honoured in the letter and the spirit if the Army of India were to pass, as the Commission suggests, out of the control of the Government of India. The Commissioners appreciate the fact that in the end, a self governing India can only hope to function with reasonable prospect of success if it can command military forces of its own. And our proposal helps to remove an obstacle to the ultimate possession of such forces.

The Future of Burma.—In Part VI the Commissioners discuss the future of Burma and recommend that Burma should be separated from India immediately. Two main grounds for the Commission's belief in the necessity

of Burma's separation from India are the strength which Burman sentiment in its favour has now attained—to the overshadowing of every other Burman demand—and the constitutional difficulty of giving to Burma a satisfactory place in any centralized system designed to advance the realization of responsible Government in British India.

The Commission points to the limited character of Burma's representation in the Central Legislature and to the fact that much of the time of the Assembly is taken up in discussion of questions which have no practical interest for Burma. Moreover, Burma increasingly feels that its own practical interests sometimes conflict with the policy which commands itself to the majority in the Central Legislature. For example, the tariff policy of India includes a substantial Customs duty on imported steel which operates to protect the Indian steel industry. Burma however requires to import cheap steel for the purpose of her oil industry and for her general development. Thus the interests of the two countries in economic policy have already begun to diverge and it is easy to imagine cases where future policy may make the divergence more considerable still. Yet Burma's special interests carry little weight in the Indian Legislature in comparison with the more powerful influence of great business centres in India like Bombay or Calcutta. The Commissioners add—

'Burma's actual experience as an element represented in the Central Legislature has reinforced the argument for separation based on national sentiment. As long as the Government of India was an autocratic Government responsible only to the British Parliament reasons of administrative convenience might justify the inclusion of Burma in the Indian Empire. But the British Government has announced its intention of establishing by progressive stages responsible government in British India and no one in Burma believes that the Burmans would acquiesce permanently in being governed by a self governed India. We come to the definite conclusion therefore, that nothing but the most overwhelming considerations could justify the continued retention of Burma within the Government of India.

The Indian States.—Future relations with the Indian States are discussed at length in Part VII of the Report. The Commissioners say they are glad to learn from many indications that their proposal of a Conference, to be held after their report is published, to which both representatives of British India and representatives of the States would be invited by His Majesty's Government, has been welcomed on the side of the Indian Princes. In what follows in this part of the Report the Commissioners seek to concentrate attention upon and to analyse certain suggestions in the hope that their work may be useful to this Conference. They consider that they are following what has become a generally accepted view when they affirm their own belief that the essential unity of Greater India will one day be expressed in some form of federal association but that the evolution will be slow and cannot be really pressed.

federations (they point out) come about only when the units to be federated are ready for the process, and we are far from supposing that the Federation of Greater India can be artificially hastened, or that, when it comes, it will spring into being at a bound. The practical question is whether at the present stage there are any definite but modest steps which might be taken by way of tentative advance.

The Chamber of Princes has provided a valuable means for joint consultation, but the Chamber is not in itself a federal organ for it is exclusively concerned with Indian problems looked at from the side of the Indian States.

The Report adds —

What is now needed is some organ, however rudimentary which will for some purposes, however limited address itself to the treatment of matters which are of common concern to the whole of Greater India not from the side of the Indian States alone, nor solely from the side of British India, but from both. If the new step is a very small one it would be of profound significance should it satisfy this condition. We hope that it may be found possible to make a beginning and we have three concrete proposals to put forward.

First, we should like to see a serious and business-like effort now made to draw up a list of those matters of common concern which are so often referred to but have seldom been defined.

Secondly, we should like to see included in the Preamble to any new Government of India Act a recital which would put on record the desire to develop that closer association between the Indian States and British India which is the motive force behind all discussions of an eventual Federal Union. It would, of course, be absolutely necessary to make plain in the Preamble (what is at all times acknowledged and understood) that any such association can only come about if and so far as the Indian States desire that it should.

And thirdly we wish to suggest that steps should be taken now to devise the creation and setting up of a standing consultative body containing representatives both from British India and the Indian States, with powers of discussion and of reaching and recording deliberate results on topics falling within the list of matters of common concern. It is clear that the machinery for joint consultation must precede anything in the nature of executive or legislative action on federal lines.

It is suggested that the Preamble to which reference has been made might contain a recital to the effect that it is desirable to make provision whereby such Indian States as so desire may be associated with British India in the consideration of matters of common concern between the Indian States and British India. The operative clause of the Act might provide that it should be lawful for the Crown to create by proclamation a Council for Greater India for the purpose of consulting on matters of common concern to British India and the Indian States. There would be a specific

provision inserted that it was beyond the competence of the Council for Greater India to call in question or to discuss (a) the internal administration of an Indian State or of British India, or of any part of it (b) the existence and exercise by the British Crown of its functions as Paramount Power. Matters of common concern would be listed in a schedule to the Act.

The Council would consist of say 30 members, of which 10 would be representatives of the States. The Council would be presided over by the Viceroy or in his absence by one of a committee of four Vice-Presidents, two from the States side and two out of the contingent from British India. As regards the scheduled list of matters of common concern, the Commissioners think that the best plan would be to mention certain topics specifically and to add at the end of this specific list (so as to provide a power of expansion) the phrase "together with such other subjects of common concern as the Viceroy from time to time certifies as suitable for consideration by the Council." The Council's discussions would in some cases be in the nature of general debates and in some cases would refer to concrete proposals. The Council would provide an opportunity for taking the Indian States into consultation about changes in the tariff. The Commissioners add —

The whole scheme for the Council, as we conceive it, is designed to make a beginning in the process which may one day lead to Indian federation. What we are proposing is merely a throwing across the gap of the first strands which may in time mark the line of a solid and enduring bridge, and we feel convinced that the process must begin in organized consultation between the States and British India both because such consultation is urgently needed in the interests of both and because it will assuredly foster the sense of need for further developments and bring more nearly within the range of realisation other steps which are as yet too distant and too dim to be entered upon and described.

Finance — The whole of Part VIII containing nine Chapters consists of the report of the Commission's Financial Assessor Mr (now Sir) W T Layton. The Commission's recommendations which follow the general principles of this report, but do not touch upon future revenue and expenditure appear earlier in Part IV. The report is based on two general assumptions, namely that it is both possible and desirable to improve the economic and social condition of India by a substantial increase in the expenditure on nation-building services, and, secondly, that it is possible to raise additional revenues for this purpose, provided that the incidence to further taxation is adjusted to the capacity of the taxpayers to pay. If additional taxation is to be raised however it is necessary that the new constitution should ensure —

(a) That sources of revenue appropriate to their requirements are available for those authorities who have urgent and expanding services to administer,

(b) That all parts of India make a not unfair contribution to common purposes, and

(c) That responsibility for imposing additional taxation is definitely laid upon those who will have to incur additional expenditure

It is stated that the existing financial scheme does not adequately fulfil these conditions. In particular the allocation of resources between the Centre and the Provinces respectively has been criticized and with justice on three main grounds—

(a) Although the provinces have rapidly expanding needs the sources of provincial revenue (of which the chief are land revenue, alcoholic excises and stamps) are almost stationary while the revenue of the Centre (the chief sources are Customs and alcoholic excises, income tax, and salt duty) which has to meet comparatively stationary needs has expanded and is capable of further expansion

(b) It has treated the provinces very unequally by giving some of them a much greater proportionate increase of revenue than others

(c) It has given practically no power to the provinces to tax industrial activities and has therefore handicapped the industrial provinces

An analysis of the central budget and of the elements which compose it shows that a surplus is likely to emerge gradually as a result of the growth of revenue the chief contributor to which will be Customs. Any prospective surplus in the central budget however will go a comparatively little way towards meeting the needs of the provinces. It is therefore essential to find new sources of revenue. Additional funds may be found from the following sources—

(a) Increased yield of the income tax by lowering the exemption limits by steepening the graduation in the case of intermediate incomes and by an amendment of law relating to the taxation of income invested abroad. The rate is also low and a moderate increase should be possible.

(b) Abolition of the exemption of agricultural incomes from income tax

(c) National excises on such commodities as cigarettes and matches

(d) Terminal taxes [These are taxes levied at a railway station on all goods imported or exported at the station]

Allocation of Revenues.—Three methods of dealing with this situation are discussed and finally the method put forward as the one most desirable is that of supplementing the sources of revenue assigned to and collected by the provinces by certain national taxes collected by the Centre on behalf of the provinces and distributed to them on some predetermined automatic basis. A complete scheme of allocation should, the Report states, provide for the distribution of centrally collected revenues, in part according to origin and in part on a population basis. Details are given of the scheme proposed but it is pointed out that the central budget cannot at present afford the immediate transfer of all the resources which it will ultimately lose under the scheme. It is therefore proposed that a time table should be drawn up

under which each of the items would be transferred according to a definite schedule that would complete the transfer in ten years. In drawing up the schedule the urgent needs of Bengal and to a less extent of Bombay should be recognized. If all the proposals embodied in the scheme are carried out the effect would be to add nearly 40 crores to the revenues of provinces by 1940 of which 12 would have been transferred from the Central budget. The proposal to assist the provinces by means of a Provincial Fund is described as essentially a federal idea. The Central Legislative Assembly in the form proposed by the Commission is a suitable body to vote the taxes that form part of the scheme, but the initiative in regard to changes in them should be taken officially by the Provincial Governments of whose budgets they will form an integral part. The financial problem in relation to the Indian States is discussed in the Financial Assessor's report and the importance of finding means of harmonising the financial policy of the States and of British India is emphasized.

The High Courts.—Part X deals with the High Courts. It recommends that the charges of all High Courts should be put upon central revenues and that the administrative control of all High Courts should be exercised by the Government of India and not by the Provincial Governments.

At present the position of the High Court at Calcutta differs from that of other High Courts in Bengal (certain important functions involving control over the High Court which have in other provinces been committed to the Governor in Council have been entrusted to the Governor General in Council. In other words the High Court of Calcutta is under the Government of India for some administrative purposes. All the other High Courts are for administrative purposes under their respective Provincial Governments. This disparity of treatment is due to historic causes. There is no reason why the anomaly should not be removed by putting all the other High Courts (including the Chief Court of Oudh and the Courts of the Judicial Commissioners of the Central Provinces and of Sind) under the administrative control of the Central Government.

The Home and Indian Governments.—In Part XI which deals with the relations between the Home and the Indian Government, it is pointed out that the proposals made by the Commission for the extension of the field within which responsibility for the Government of British India rests upon elected Indian Legislatures involve a corresponding restriction of the control of Parliament. As regards the India Office, the Governor General in Council will remain in constitutional theory under the superintendence direction and control of the Secretary of State, and the extent to which this control is relaxed or falls into desuetude will depend upon future practice and cannot be laid down in the Statute. Apart from his authority over the Governor General in Council, the Secretary of State will exercise no control over Provincial Governments save in so far as he does so in connexion with the use of special powers vested in the Governor.

The functions and composition of the Council of India are modified by the Report. It is proposed to reduce its size and to provide that the majority of its members should have the qualification of more recent Indian experience than is required at present. The functions contemplated for the Council would be essentially advisory, but independent powers would continue for (1) the control of Services conditions, and (2) the control of non-votable Indian expenditure.

The Commission says it is not in a position to judge how far its recommendations will affect the personnel of the India Office, but if material reductions in the India Office staff should result from them the Commission thinks that consideration should be given to the question of granting special compensation to Civil servants for whom equivalent employment cannot be provided elsewhere.

VIEWS OF GOVERNMENT OF INDIA

Summary of Dispatch—In a dispatch dated September 20 the Government of India, as a preliminary to the discussions of the Round Table Conference, submit their views on the further progress which might now be made towards the development of responsible Government in India as an integral part of the British Empire.

The dispatch opens with a brief discussion of the political forces at work in India, the constitutional demands that are most commonly put forward and the strength of opinion on which they rest.

No attempt is made to minimize the wide divergence and the significance of national ideas. There is no doubt that a considerable degree of national consciousness has been evolved among the educated classes as a whole. With the economic and educational development of the country have come, naturally and honourably enough, a greater self-respect both individual and national, and a demand for equality of treatment and status with the West. It is pointed out that it was inevitable that this national impetus should come and it would be a grave mistake to underestimate its force or to depreciate its value.

The Nationalist Demand is stated to be for self Government and Dominion status.

It is couched in terms of British thought and British institutions, for it emanates from those who have been profoundly influenced by British ideas. The demand for self government stated in practical terms is that India should be allowed to manage her own affairs, both in the provinces and subject to any temporary safeguards that may be requisite, at the centre. The claim to Dominion status, so far as that can be separated from ideas of self government has perhaps a sentimental, but not on that account any less potent aspect. The demand is not only that India should be enabled actually within necessary limits to settle her own affairs but that she should be publicly recognized before the eyes of the world as competent to settle them. Both these ideas are included by Indian opinion in that Dominion status which the announcement by the Viceroy on October 31, 1929 described as the natural issue of India's constitutional progress.

It is pointed out that the course of the civil disobedience movement in the last few months has exhibited the strength of the nationalist forces and also their limitations. It is clear that they have on their

side a substantial measure of support from educated Hindus of all classes. There is little doubt also that the minority communities to a large extent share in these broad nationalist aspirations but generally speaking they are not without apprehensions of their position in a self governing India, and they are concentrating attention on the protection of their rights and interests. The general conclusion is drawn that the time has passed when it was safe to assume the passive consent of the governed. The new system must be based as far as possible on the willing consent of a people whose political consciousness is steadily being awakened. There is still in the country a fundamental respect for authority. The new legislatures have established for themselves a position which is gradually coming to be understood and accepted by increasing numbers.

The Government of India then proceed to explain their general outlook on the constitutional problems and the principles which guide their conclusions.

Federation—Of the ultimate constitution of India as an all India federation including not only British India but also the Indian States as pictured by the Statutory Commission the dispatch says—

This is an ideal which we fully accept. There is an essential unity embracing the whole of India which we hope will at some future time find expression in certain joint political institutions. But it is clear, as the Statutory Commission have been careful to point out, that this ideal is at present distant, and that the federation of Greater India to which they look forward cannot be artificially hastened. Much may be done to promote a more vivid sense of the unity of interests in many spheres between British India and the various States and to develop the conception that there are matters of common concern which can best be treated in consultation. Nevertheless, we must recognize that the time has not yet come, when the general body of Indian States would be prepared to take a step so far-reaching in its character as to enter into any formal federal relations with British India.

While therefore we are entirely at one with the Statutory Commission in holding that the ideal is a federation of all India and that this ideal should be clearly borne in mind when drawing the main outlines of the constitution of the new India, we must also recognize

that the ideal is not likely to realize itself save in its own due time. There is a certain danger that if we direct our gaze too fixedly to a distant future we may tend to overlook the needs of an urgent present. The main problem which must engage our attention is how British India may be developed in a manner which shall not only be consistent with the wider vision but shall be appropriate to its own immediate requirements.

We have already an administrative unity and our first task is to decentralize with a view to permitting the development in the provinces of that degree of independent activity which should characterize the units of a federation. We are therefore in full agreement with the broad aim of the Commission to give to the provinces the maximum of autonomy consistent with the interest of India as a whole and to make each province as far as possible mistress in its own house. But in following this policy we must be careful not to sacrifice the spirit of national unity which has gradually been developing under the centralized British administration. We require a vigorous central authority capable of sustaining the heavy burdens that necessarily fall upon it.

The Central Authority—The form which the central authority should take is described as the most difficult problem. The Government of India offer in a later passage in the dispatch their own suggestions for the general treatment of this problem which while admittedly not proof against criticism, seem to us on the basis of our own experience, less open to objection than others that we have seen. The conception underlying these suggestions is shown in the following words—

"The conditions of the problem suggest to us the importance of defining as clearly as possible the purposes which Britain must continue to safeguard in India, and making it plain that, where those purposes are not concerned India should be free to manage her own affairs. The British Government must satisfy itself on certain essential points, for instance that the defence of India from external attack, which rests, and for many years must continue to rest largely on British troops is fully assured; that relations with foreign States, with the ultimate possibilities of war which they involve are conducted under its authority; that the conditions of internal security are maintained that financial obligations are provided for and the requisite financial stability and credit of the country adequately secured; that reasonable treatment is accorded to minorities; and that unfair discrimination is not practised against any section of the community. In our opinion the ultimate control of these matters must in present conditions reside in the British Parliament. It would be understood that upon Parliament rests an obligation to secure certain definite purposes, and that for these express purposes it may be necessary for Parliament to intervene at any point in the administration of the central Government.

But says, the dispatch whatever may be the plan adopted, we are convinced that no

scheme of government at the centre can work with success, unless it is recognized that Parliament and the Indian Legislature have each their special contribution to make to the welfare of India which is the joint purpose of both. Our aim should be a partnership in common cause.

The Provinces—Coming to a consideration of the detailed proposals of the Statutory Commission and following the Commission's order the Government of India deal first with the Governors Provinces. With regard to the vexed question of provincial boundaries they suggest the early appointment of two separate committees to investigate the proposals for constituting new Provinces in Sind and Orissa. The important proposal of the Statutory Commission for the abolition of diarchy and the consequent establishment in the Provinces of responsible Governments (with no official share) dealing with the whole provincial field, including law and order is accepted with full recognition of the risks inherent in so great a change. This conclusion is stated to be in agreement with the great mass of opinion in India, both official and non official.

Second Chamber—The Government of India accept the recommendations of the Governments of Madras, Bombay, the Punjab, the Central Provinces and Assam that there should be no second chamber in those provinces. Similarly they accept the recommendations of the Governments of Bengal the United Provinces and Bihar and Orissa that in those provinces there should be a second chamber and suggest that the manner in which the Upper House should in each instance be composed in those three provinces should be left to further investigation by the Franchise Committee in the light of the suggestions which the three Governments have put forward.

It is later explained that the Government of India agree with the majority of the Provincial Governments that it would be unwise to attempt to turn upon India measures for the enfranchisement of great numbers of women. They suggest therefore that this matter should continue to be left to the decision of the provincial councils. So long however as the principle is set out by the Joint Select Committee of Parliament is maintained they think it to be a proper course that the suggestions of the Commission for the special enfranchisement of women should be further investigated by the Franchise Committee.

The problem of communal representation is discussed at some length, and it is pointed out that on its solution will depend in no small measure the success or failure of the new constitution. The efforts made to reach a settlement between the Hindus and the Moslems are highly reviewed and the need for an agreed solution is recognized. The view is expressed in agreement with the Statutory Commission and with every Provincial Government that separate communal electorates should not be taken away without the consent of the community concerned and that

each consent should require the votes of two thirds of the members in the legislature of the community concerned.

It is also explained that on the more general aspects of this baffling problem we consider that it may be a legitimate grievance to deprive Moslems in the Punjab and in Bengal (where they form a majority of the population) of representation in the Councils in proportion to their population merely because of the weightage allowed to Moslem minorities elsewhere.

The recommendation which was made by the Statutory Commission to discontinue the representation of landholders by means of special constituencies is not approved. The special representation enjoyed by Europeans and other classes is maintained. The problem of the representation of the depressed classes and of labour should it be thought be further examined by a franchise Committee.

With regard to the formation of Provincial Cabinets special attention is given to the suggestion made by the Statutory Commission that the Governor should possess the discretion to appoint official Ministers. The Commission proposed that such Ministers should become ex officio members of the Legislature and it was indicated that they would ordinarily be experienced officials. It is pointed out in the Dispatch that there is a general consensus of opinion in the replies of the Provincial Governments that an official Minister would be difficult to maintain in office against the wishes of his colleagues. The Government of India, however, are reluctant to depart from the recommendation of the Commission that there should be a discretionary power with the Governor to make such appointments should circumstances so require. They think it likely that an official Minister would seldom be appointed, and that, if appointed his appointment would rest on general consent. They agree, however, with the Commission that the Governor should be free to exercise discretion in the matter.

It is agreed that it would be neither practicable nor desirable at once to enact the position that the Governor should be bound on all subjects by the advice of his Ministers, but the use by the Governor of his overriding powers will, it is anticipated, be infrequent and reserved for exceptional occasions when no other course seems appropriate. Not the least of the relevant considerations for giving the Governor overriding powers is stated to be the reliance which the minority communities will repose in the Governor for their protection.

The problem of the North West Frontier Province is discussed separately and reasons are suggested for giving to this Province a form of government somewhat more liberal than was proposed either by the Statutory Commission or by the Indian Central Committee. The realities of the situation make it a matter of the first importance that the scheme adopted should attract a reasonable measure of public support, and, subject to the necessary safeguards, that it should not leave

the way open for invidious comparisons between the form of Government in the North West Frontier Province and that introduced elsewhere. A scheme prepared by the Chief Commissioner of the North West Frontier Province is put forward for consideration comprising a form of executive Government in which the Chief Commissioner would be assisted by one official and one non official Minister. There would as suggested by the Statutory Commission be a Legislature consisting of elected and non elected elements in approximately equal proportions.

With regard to the proposal for the separation of Burma from India the conclusion of the Government of India is stated as follows:—

Assuming that an equitable financial settlement will be made between the two countries, and that their respective economic interests will be safeguarded by arrangements which we hope will be mutually advantageous, we support in principle the proposal that Burma should now be separated. At the same time we feel strongly that it is a matter regarding which Indian opinion should have ample opportunity to declare itself and we would not ask His Majesty's Government to come to any definite decision until there has first been full discussion of the whole question at the Round Table Conference.

The Central Government.—Facing to the Central Government the Government of India consider that the main problem is the nature of the Central Executive and its relations with the Legislature. In their view conditions at the centre involve an inevitable duality or sharing of power between Parliament and the Indian Legislature. In laying down the main conditions of a strong government on the lines which have already been drawn irrevocably for India, they indicate the difficulties at present experienced owing to lack of harmony between an Executive responsible in all matters to the Secretary of State and a Legislature with a substantial majority of elected members. They draw attention to the changes proposed by the Commission in the composition of the Assembly which involve a considerable increase in the total numbers and a reduction in the official element and observe that there is little ground to anticipate that the substitution of indirect for direct election proposed by the Commission would produce a Legislature of which it could be predicted that it would work harmoniously with the Executive contemplated by the Commission.

The Government of India suggest that the proposals of the Commission are hardly likely to produce the strong Central Government which the Commission desire to see. Indeed they carry a stage further a process which we consider has already reached the limits of safety. The policy pursued in the past in developing the constitution has been to make successive advances in the Legislature while maintaining a more conservative treatment in the Executive. That may have been a wise course as a matter of political education, but in other respects it has had consequences not salutary. It has tended to foster irresponsible

officials in the Assembly and placed the Executive in a difficult position. A stage has now been reached when the appropriate course appears to be to endeavour to bring the development in the Legislature and the Executive into closer co-ordination. We should therefore, prefer to pursue a somewhat more cautious policy in regard to the Legislature and to consider whether it is not possible to contemplate some development of the Commission's proposals for the Executive in its relations on the one hand to the Secretary of State and on the other to the Legislature which would afford promise of more favourable conditions than these proposals as they have been generally understood, would appear to contain.

Under the proposals of the Commission we fear the Executive would find itself constantly faced with the dilemma either of conflict with the Legislature under conditions in which it could never expect a majority or of subordination to the views of the Legislature. The answer suggested by the Commission to this line of argument is that in fact Government policy will be profoundly affected by the action of the Legislature, and that the Executive will to an increasing degree be responsive to the will of the members of the Assembly. This doctrine of responsiveness is one to which we ourselves attach great importance, but it must be recognized on the one hand that it cannot be applied when the popular view is in opposition to the policy which Parliament considers it necessary to pursue and on the other hand, that when it is applied consistently it approaches very near to responsibility. Responsiveness to the Legislature is difficult to combine with a strict adherence to the principle of responsibility to Parliament over the whole field. The difficulties inherent in the situation would be greatly enhanced by constituting the Executive and the Legislature on principles which would widen the gap between them.

Defence.—The Commission have been greatly impressed by two incontestable facts. The first is that the defence of India involves interests in which the whole Empire is concerned. The second is that though we look forward to a future in which India will assume responsibility for her own defence, for the present and for many years to come the defence of India must rest on an army which includes a large British element. From these two facts the Commission draw the conclusion, which we fully accept, that Parliament cannot now or in any future which is within sight divest itself of all responsibility for the army in India. The Commission view this conclusion as involving an obstacle in the way of progress to full responsibility. We agree that the problem of defence is the most serious difficulty that stands in the way of India's attainment of fully responsible self-government, and that it is likely to continue longest. But at the moment it is by no means the only difficulty, and we think it is important not to suggest that its removal would at once clear the way to full responsible government over the rest of the central field. It is evident that it is not the view of the Indian Statutory Commission.

A Unitary Government.—The conclusion of the Government of India is that 'it would seem necessary to look to some solution on the lines of a unitary Government' and it is suggested that such a Government, while containing a definite official element and not formally responsible to the Indian Legislature, would yet include an appreciable popular element consisting of elected members of the Legislature, who might command sufficient support in that body to afford in normal circumstances the promise of reasonable harmony between the Executive and the Legislature. The proposal of the Statutory Commission that the members of the Governor General's Council should be appointed not as now, by the Crown but by the Governor-General is welcomed, and considerable constitutional significance is attached to this change.

How the Government would work.—The Dispatch indicates at some length how a Government of the type proposed might be expected to work. The objections to it are not ignored, but stated as follows:—

'It involves a form of dualism within the Government. It will not work harmoniously without goodwill. It can be attacked on the one hand on the ground that, owing to the strong influence of the elected members and the Legislature, the responsibilities which the Government of India owe to Parliament will not be fully discharged. It can be attacked on the other hand for its failure to offer clear cut responsibility on the popular side. Most of these objections are inherent in any attempt to share power. For the success of any such attempt it is necessary to assume a measure of agreement. Without this no constitution will function satisfactorily. It may be that some other method than the one we have adumbrated can be devised. But let the main elements of the problem be remembered. The Executive must own responsibility in certain matters to Parliament. The Legislature must on any supposition have a substantial popular majority. If a completely irresponsible Executive is confronted by a predominantly popular Legislature the result must be intolerable friction.

In discussing the powers of the Governor General the Government of India declares that it is evident that the powers of the Governor-General in relation to the Legislature must remain unimpaired.

Safeguards.—The purposes which, it is suggested, His Majesty's Government must safeguard are briefly summarized as defence, foreign relations, internal security, financial obligations, financial stability, protection of minorities and of the rights of services recruited by the Secretary of State and the prevention of unfair economic and commercial discrimination.

Finally, the Government of India deal with the potentialities of development. 'It must be expected that any scheme of government at the centre will be judged by Indian opinion on the promise it affords of development into full responsibility. We think that the suggested form of unitary government leaves the path open for such development on natural lines, and this is in our view perhaps its main attraction.'

The Lower House.—In dealing with the Lower House the Government of India state—

It may be that the representation of provinces by indirect election might facilitate at a later date the representation of the States in the Federal Assembly, but we would make two comments. The first is that it is far from certain that federation for the whole of India will come about by the inclusion of the States in the Assembly. It may be that some new federal organ will be developed. The second is that even if the States did enter the Assembly it does not appear to us to be necessary that the method of representation of the States and the provinces of British India must be uniform. We should therefore hesitate to put the federal argument of the Commission too high.

Turning to the broad questions of the composition and size of the Assembly, the Government of India declare that they do not think that the time has yet come for the abolition of the nominated portion of the Assembly. We would retain nomination for the two purposes of curing inequalities or defects in representation by election and of obtaining some additional support in the Assembly for an Executive of the form which we contemplate. We would in this way secure an element to represent the unfranchised and articulate as well as spokesmen who would explain and defend the purposes for which Parliament must intervene in the administration of India.

The present Assembly has 145 members. A somewhat larger House is suggested with a minimum of 200 members.

The Upper House.—With regard to the Upper House emphasis is laid on the importance of having a second Chamber so constituted as to be able to give to the Executive reasonable and discriminating support and the view is expressed that the Council of State should remain much as it is at present. It is recognized however that if the Assembly were to continue to be constituted on the basis of direct election there might be some advantage in taking occasion through the Council of State of familiarizing members with the federal idea and the system of indirect election. Subject to the two conditions that the change involved no prejudice to the rights of minorities, and that it commended itself to public opinion, the Government of India would be prepared to accept the proposals of the Statutory Commission for indirect election to the Council of State.

THE ARMY

It is considered preferable, after examining both of the constitutional and of the administrative aspects, that the proposal of the Commission to place the control of the Army in India under an Imperial authority should not be adopted and that the Government of India should retain its control of the administration of defence. The Commission themselves, however, recommend the adoption of their scheme only on the understanding that it meet with acceptance. If Indian opinion were decidedly in its favour we should be prepared to reconsider our views. The proposal hitherto does not appear to have enlisted any public support.

It is suggested in agreement with the Commission, that the Commander in Chief should cease to be a member of the Indian Legislature, and that his place in that respect should be taken by a civilian member for defence, who would become the responsible member of Government and Government spokesman in the Legislature on all matters of defence policy. This would constitute the simplest method of relieving the Commander in Chief of duties which are extraneous to the nature of his profession and appointment. It is proposed, however, that the Commander in Chief should as a matter of rule be present in the Governor General's Council when military affairs are discussed.

With regard to the Indianization of the Army, it is stated to be of paramount importance that we should satisfy Indian public opinion that we are in earnest in our policy and that our measures of Indianization are directed towards a definite goal. It is equally important that our critics on the other hand should recognize that the maintenance of efficiency is an indispensable condition of progress and that this plea is not raised for the purpose of obstructing legitimate demands. The policy of Indianization is reviewed and the arguments for and against establishing an Indian Staff Corps are fully stated. The Government of India not being unanimous on the point.

Central Finance.—With regard to central finance the special difficulties inherent in a transfer of responsibility are fully set out. Emphasis is chiefly laid first on the vital importance to India of the maintenance of credit in the widest sense, and secondly on the magnitude of the interest which has hitherto been safeguarded under the responsibility of the Secretary of State. Reference is also made to the unusual responsibilities now carried by the Government in relation to currency and to the special difficulties created by the immediate financial and economic situation partly as a result of the disturbances and mistrust caused by the recent subversive movements and the task of repudiating debt.

The conclusion is drawn that the occasion for a transfer of financial responsibility cannot be reached apart from the fulfilment of certain conditions such as the restoration of normal economic conditions, the re-establishment of credit and confidence, and the inauguration and successful working for some time of a reserve bank with adequate sterling reserves.

It would be the task of the Government to do all in its power to expedite the fulfilment of such of the conditions as it can influence. But on the other hand we must emphasize that the chances of an advance are dependent on action to be taken on the Indian side, for we consider it essential that Indians should realize that they also have a definite task to fulfil. The manner in which the necessary conditions may be fulfilled is only sketched in outline for it is precisely on the subject of these conditions that free discussion at the Round Table Conference is likely to be helpful.

With regard to commercial policy it is suggested that subject to two necessary limitations, there should be no interference with India's management of her Customs tariff. The first of these limitations is financial. The Govern-

ment of India must look to the tariff as the principal source of their revenues and the tariff, therefore has a financial aspect which must receive full consideration. The second limitation is concerned with external relations. This "is not likely to involve constant interference, but is consistent with the grant of considerable latitude to the Government of India when commercial negotiations have to be undertaken either with foreign countries or with other parts of the British Commonwealth. So far as Great Britain itself is concerned, control might reasonably be exercised to secure for British goods most favoured nation tariff treatment, but it would be for the Indian Government and Legislature of the future to decide all questions of preferential rates of duty.

With regard to commercial and industrial policy generally the brief is expressed that if once agreement could be reached as to the position of British enterprise in India and if by that means the apprehensions of the European business community could be removed, there is no reason why the control of policy should not pass into Indian hands. While we cannot but sympathize with the earnest desire of Indians to see their countrymen taking an increasing share in the commercial and industrial life of the country, we must also take account of the anxiety with which European business men regard the future after the transfer of power has taken place, and in so far as this anxiety may seem to be well founded we are concerned to provide safeguards against injustice. The matter is one which requires full and frank discussion between those principally concerned and we have no doubt it will receive close attention at the Round Table Conference.

With regard to Railways it is said that "if in the future the control of commercial and industrial policy is to rest with the Indian Legislature the general direction of railway policy should be placed in the same hands."

The question of the Services which are still recruited by the Secretary of State on an all India basis is said to be one of great importance for the future administration of the country, and, we think for the successful working of the new Constitution which it is proposed to set up. With regard to the Indian Civil Service and the Indian Police Service the Government of India state, that they have no hesitation in supporting the proposal that recruitment should be continued on an all India basis by the Secretary of State and under the guarantee of his protection. It is however made plain that the continuance of recruitment for these two Services must not be taken as implying an intention that they should be retained indefinitely and it seems to the Government of India inevitable that when the proportions of Indians to Europeans contemplated by the Lee Commission have been attained, the future of each of these two Services must be fully reviewed.

A separate section on relations with the States contains a discussion of the Commission's suggestion that the exercise of paramountcy should no longer be a function of the Government of India. It is agreed that paramountcy should vest in the Crown. The proposal for

the establishment of a Council for Greater India is supported, and emphasis is laid on the need for an early review of the financial and economic relations between the Indian States and British India. It is hoped that the occasion for reaching an agreement on broad principles may be afforded by the Round Table Conference.

After a discussion of the relations between the Government of India and the Secretary of State which would seem to follow from the general scheme suggested by the Government of India the Dispatch concludes —

The recommendations of the Indian Statutory Commission as to the provincial constitutions with which in general we agree represent a generous response to the popular demand for provincial autonomy. They contain within themselves the means of increasing adaptation to local circumstances, and to the wishes of those who will be charged with the task of working the constitution that the Commission have outlined. Our proposals for the centre in amplification of the plan put forward by the Commission, have been designed with a double purpose. On the one hand we have sought to examine the means by which the relations between Executive and Legislature can be established on a basis which offers a reasonable chance of harmony in working. On the other we have endeavoured to point the way to action that may now be taken to place upon the constitution the first but definite impress of Dominion status. If we read history aright it is exactly in this way that each and all of the Dominions have attained to constitutional nationhood.

Accepting the recommendations of the Commission that the members of the Central Cabinet should be appointed by the Governor General, we have drawn what appeared to us the consequential inference that the exercise of the functions for the Government of India which reside in the Crown should be directly devolved upon the Governor General and that therewith should go the power to appropriate the revenues of India. We think it right to state clearly that if this were done the Government of India would no longer merely be the agent of the Secretary of State. For the first time it would possess a distinct individuality. It would be true, be within specific limits under the control of his Majesty's Government, but it is of the essence of our proposals that that control should be of such a nature as to establish partnership in place of subordination.

The Government of India would then be a distinct entity, capable of acting in domestic matters on its own initiative and, within the ambit of its uncontrolled powers free to pursue its own policy. For as the Dominions and foreign countries, it would occupy the new position which growing freedom in the conduct of external affairs would connote. That it would not be an entirely independent Government is due to circumstances, internal and external to India, which are generally familiar and which invest the problem with such peculiar difficulty. But, while we are bound to suggest means by which provision can be made for the period of transition which must elapse before the complete

fulfilment of British purpose, as declared in the announcements made on behalf of His Majesty's Government we would set no artificial or statutory barrier to the natural evolution we desire to see. We believe that the greater part of Indian opinion will be ready to recognize

the special interests of Parliament provided that Great Britain on her side is prepared by action to show that she does not falter in her desire to invest India with the constitutional status that she seeks, and that her political development appears to us to justify

VIEWS OF PROVINCIAL GOVERNMENTS

Following the publication of the Simon Report the Provincial Governments prepared their views, and the subsidiary reports of the Governments of Bombay, Madras, Bengal, the Punjab, the Central Provinces, the United Provinces, Bihar and Orissa, Assam, and Burma are now available. Some of these reports show very general agreement with the recommendations of the now defunct Simon Commission. Most are in favour of a federal basis for the future Government of India. All express anxiety for the security of the Services and opinions are sharply divided on the problem of Indian defence. Almost all approve the continuance of the Council of State. One or two Governments, like Madras, refrained from comment on the Central Government and confined themselves to expansive criticisms of the future of provincial government. A general conclusion would be that provincial needs differ considerably, and these needs must be met by a correspondingly flexible legislature. The almost overwhelming condemnation of the proposal for Second Chambers in the Provinces for instance does not invalidate the claim of a certain section in the United Provinces that it would find one useful.

Appended are a few of the observations made by the Provincial Governments.

Federal Government

Bombay—The proposed reconstitution will not give the Presidency a fair representation. The future Government of India must have a federal basis.

Bengal—If India is to be one of the constituent States of the Commonwealth of Nations united under the Crown the ultimate constitution must be federal.

The Punjab (Official)—Indirect election will emphasize and establish beyond dispute the federal nature of the Indian constitution.

United Provinces—The direct system of election to the Federal Assembly should continue as it has existed hitherto.

The Central Provinces—The Legislative Assembly has voted satisfactorily the national aspirations of the country. Unless those for whom the reforms have been designed are willing to work a Federal Assembly, it is of little use to force its creation.

Bihar and Orissa—On the proposal for a Federal Assembly opinion is divided.

Assam—The proposal is welcomed.

Provincial Government.

Bombay—A Provincial Cabinet should not include Ministers appointed from outside the Council. Existing restrictions against encroachment upon the central sphere are too rigid.

Madras—The Government accepts substantially the recommendations of the Report. Mahomedans must retain separate electorates until they agree to surrender them. The Governor must retain the right to nominate representatives for certain minorities.

Bengal—Dvarkh must go and a unitary Government be established. The transfer of all subjects including Law and Order to Ministers is inadequate. The transfer cannot be made without safeguards. The safeguards provided in the Report are inadequate and illusory.

United Provinces—Conscious of the great dangers involved in responsible government but realising the abolition of dyarchy to be inevitable, the Government proposes important safeguards. Members of the Ministry must accept responsibility for the whole policy of the Government. The Governor may include in his Ministry non-officials other than elected members of the legislature. A provincial statute must fix the salaries of Ministers. Votes of censure may be admissible only when they apply to the Ministry as a whole.

The Governor

Bombay—There must be some ultimate authority empowered to carry on the administration in emergencies. In the province the Governor appears to be the only authority to whom these powers can be entrusted.

Madras—In the exercise of special and emergency powers the Governor should be subject to the control of the Governor General. It is not necessary for the Governor to be the agent of the Governor General.

Bengal—The Governor must be armed with full and ample powers to deal with any emergency that may arise when the ordinary machinery of Government has come to a standstill or when its powers are seriously misdirected. Similar reserve powers must remain with the Governor General in matters affecting the Central Government.

Central Provinces—It is useless to envisage a Governor in constant need of powers against his Ministers. Once mutual confidence has gone, the time for the Governor to part with his Ministers has come.

United Provinces—The Governor must be allowed to overrule his Ministers when this is necessary (1) to protect the safety of the province (2) to prevent serious prejudice to one or more sections of the community (3) to secure the fulfilment of Government liabilities (4) to carry out an order from the Government of India or the Secretary of State and (5) to fulfil duties statutorily imposed upon him personally.

The Punjab—Safeguards are unnecessary other than by the overriding power of the Governor, there is no way of securing them.

Bihar and Orissa—It is impossible under present conditions for the Governor to be merely a constitutional Governor. A limited power of interference should not hamper the growth of a sense of responsibility.

Assam—The Governor's powers of intervention in finance and legislation must be strictly parallel to his powers of interference in the executive field.

Second Chambers

Bombay—A second chamber is too costly and it would be difficult to secure a sufficient number of members for it.

Madras—Though it might perform many useful functions it would dissipate too much the talent now available.

Bengal—These bodies are legislative not executive. They are not in session for more than a small part of the year. They therefore provide no safeguard in the matter of daily administration.

United Provinces—There is no general agreement. Some members believe that a second chamber will obviate the use of the Governor's special powers and will have the anxieties provoked by a wide extension of the franchise. In the United Provinces there are classes from which such a chamber can suitably be constituted.

The Punjab (Officials)—The balance of argument is against having a second chamber in the Province.

The Army

Bombay—The pace of Indianization must be accelerated. The Commission's recommendations are not acceptable. They would make the attainment of Dominion Status an impossibility. Indian sentiment would prefer a Dominion army built up under the orders of the Commander in Chief.

Madras—Indianization of the Army should proceed far more rapidly than at present.

Bengal—The reasons advanced for the changes proposed by the Simon Report are insufficient. It is most desirable that the existing arrangements should not be altered at present.

Central Provinces—Indian sentiment is not in favour of an army divorced from the control of the Government. No army can function *in vacuo*. Indians would not barter their duty to defend themselves for an Imperial subsidy. The risk be taken of reducing some what the present crushing military expenditure so as to set free funds for nation building purposes.

United Provinces—The Army must be adequate for defence and for many years to come British troops and British officers with Indian troops will be necessary.

The Punjab (Officials)—The menace is a reality. For many years to come the Army must contain British troops and British officers serving with British units.

PROVING OF WILLS

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The value of immovable properties are usually assessed at 1½ years purchase on the net Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2%, between Rs. 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purpose of probate duty the following items are allowed to be deducted:—

1. Debts left by the deceased including mortgage encumbrances.

2. The amount of funeral expenses.

3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immovable properties have not been properly valued the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula.

The Portuguese possessions in India all of which are situated within the limits of Bombay Presidency consist of the Province of Goa on the Arabian Sea Coast, the territory of Daman with the small territory called Pragana-Nagar

Avely on the Gujarat Coast, at the entrance to the Gulf of Cambay, and the little island of Diu with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula. All these three territories constitute what is called the State of India.

GOA

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south and the eastern boundary is the range of the Western Ghats which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the *Velhas Conquistas*, or Old Conquests comprising the island of Goa acquired by the Portuguese in 1510, and the neighbouring municipalities of Salsette, Bardes and Mormugao acquired in 1543, and of the *Novas Conquistas*, or New Conquests, comprising the municipalities of Pernem, Sanquelim, Ponda, Quepem, Canacona, Satali and Sangnem acquired in the latter half of the 18th century. The small island of Anjediva situated opposite the port of Karwar, in the British district of North Kanara, forms administratively a portion of the Canacona municipality. This was acquired in 1805. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east, just off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks of which the highest, Bomsegar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats and the principal eight, which are all navigable are in size of some importance. Goa possesses a fine harbour, formed by the promontories of Bardes and Salsette. Half way between these extremities lies the *cabo* or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Mormugao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Mormugao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines. A breakwater and port have been built there and the trade is considerable being chiefly transit trade from British territory. The international transit of Mormugao port was in 1926 about Rs 440 lakhs.

The People

The total population of Goa was 531,952 at the census of 1921. This gives a density of 408 persons to the square mile and the population showed an increase of 9 per cent since the

census ten years previously. In the Velhas Conquistas the majority of the population is Christian. In the Novas Conquistas Hindus are more numerous than Christians. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions claiming to be Brahmins, Chaudos and low castes, which do not intermarry. The Hindus who form about one half of the total population are largely Maratha and do not differ from those of the adjacent, Konkani districts of Bombay. All classes of the people with the exception of Europeans, use the Konkani dialect of Marathi with some admixture of Portuguese words. The official language is Portuguese which is commonly spoken in the capital and the principal towns as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a portion of British India, and the provinces of Macau (China) and Timor (Oceania), with missions in foreign countries and Mozambique (Portuguese East Africa). The Christians of Daman and Diu are subject under a new treaty signed in 1928 between Portugal and the Holy See to the Archbishop of Goa. There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country

A little over one third of the entire territory of Goa is stated to be under cultivation. The fertility of the soil varies considerably according to quality situation and water-supply. The Velhas Conquistas are as a rule better and more intensively cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm but the majority of holdings are of much smaller extent varying from half an acre to five or six acres. The staple produce of the country is rice, of which there are two good harvests but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of coconut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are

cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. There is a great shortage of agricultural labour in the Velhas Conquistas, and the cultivation of rice fields is now practically controlled by the Hindu population. In the summer months bands of artisans and field labourers from the adjoining British territory make their way into Bardes where the demand for labour is always keen. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory, but has not been seriously worked. Manganese also exists and some mines are being worked at present, the ore being exported to the Continent.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese Empire and its trade is now insignificant.

The present trade of Goa is not very large. Its imports amount to about Rs 180 lakhs and exports to about Rs 40 lakhs. The discrepancy is met from the money sent to Goa by the many emigrants who are to be found all over the world. Few manufacturing industries of any moment exist and most manufactured articles in use are imported. Exports chiefly consist of coconuts, betel nuts, mangoes and other fruits and raw produce.

A line of railway connects Mormugao with the Madras and Southern Mahratta Railway. Its length from Mormugao to Castle Rock above the Ghats where it joins the British system is 61 miles of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration and the bulk of the trade of Mormugao port is what it brings down from and takes to the interior. The telegraphs in Portuguese territories are worked as a separate system from the British. The latter however had an office at Nova-Goa maintained jointly by the two Governments but since 1925 the Nova-Goa office has been handed over to the Portuguese Government which now maintains and works all the telegraphs in its territories.

Taxes and Tariffs

The country was in a state of chronic financial equilibrium for nearly sixty years with occasional exceptions. The last war enhanced the deficits to alarming proportions and these were met by fresh taxes and new loans. Most of the new taxes were the result of the initiative of the Governor General Jaime de MORAIS, who is popularly known as the Governor of Taxes. Only in 1927 the country experienced the joys of a balanced budget and the public servants whose salaries had always remained in arrears are now being paid regularly. There is an estimated surplus of about a lakh and a half which has been earmarked for promoting the industrial progress of the country. If municipal

and national taxes be added together, the country presents a very high incidence of taxation, even higher than that of British India, the average coming to about Rs 8-3 per capita. There is no income-tax, except for government servants, but there is a special ten per cent tax on all incomes derived in the shape of interest on loans. This tax is a powerful contributory cause to the flight of capital from Portuguese India. The chief sources of revenue are the land tax, Excise and the customs. There is a special tax on emigrants which yields to the State about Rs 80,000. The country being economically backward the taxes give very little indication of its productive capacity or of its annual wealth. The national wealth is a matter of pure conjecture for lack of statistics.

The tariff schedule is based on the three-fold principle fiscal, protective and preferential. There is a limited free list on which books and paper figure prominently. The fiscal tariff ranges from 10 to 30 per cent, according to the nature of the commodities, but the duties in several cases are specific, not *ad valorem*. This causes considerable hardship to trade, and specially to the poorer classes of consumers. The preferential tariff applies to goods coming from Lisbon and the Portuguese Colonies. Very recently the principle of protection has been extended to the export of canned fruit which are entitled to a bounty of 10 per cent on their basic price.

The Capital.

Kova-Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar. Old Goa is some six miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Mormugao and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1768, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city with its row of public buildings and elegant private residences as seen from the water is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Primary School, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the viceregal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History

Goa was captured for the Portuguese by Alfonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. Portugal however with its three millions of population was too small to defend itself against Spain and maintain at the same time its immense Empire in the four Continents. Albuquerque tried to consolidate Portuguese rule in India by his policy of attracting the conquered Indians and granting them civil and religious liberties. His contemporaries however could not understand his far-seeing statesmanship and after his death they undid all his work being their dominion on conquest by the sword and military force and they laboured to consolidate it by a proselytising organisation which throws all the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions and the Inquisition which was a power in the land. The sixty years subjection to Spain in the 17th century completed the ruin of the Portuguese Empire in the East and though the Marquis of Pombal in the 18th century tried to stave off its decadence his subordinates in far off India either could not understand or would not carry out his orders and even his strong hand was unable to stop the decline. It was in the 19th century that the colonials began to enjoy full Portuguese citizenship and sent their representatives to the Parliament in Lisbon.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off and the Novas Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satal in the Novas Conquistas revolted. In 1871 the native army in Goa mutinied and the King's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranes joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912 troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913. There has been no outbreak after that date.

The people on the whole appear to be quite satisfied with the Portuguese connection. There is no agitation for further reforms as in British India and not a sign of disaffection against Portuguese rule. This is chiefly due to the fact that under the present regime the natives of Goa enjoy complete equality with the natives of Por-

tugal, many of the sons of Goa occupying high and responsible positions in Portugal. Thus Elvino de Brito who was Minister of Public Works towards the end of the last century was a native of Goa as was the father of Dr. Bettan court Rodrigues, Minister for Foreign Affairs in General Carmonas dictatorial Government. Natives of Goa are also Dr. Almeida Aze, the President of the Supreme Court in Lisbon, Dr. Caetano Gonsalves, Judge of the same Court and Mr. Alberto Xavier, Secretary General of the Ministry of Finance.

Administration.

The Lisbon Government by Decree No 3266, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (Carta Organica) in force since 1st July 1919. This Charter, regarding civil and financial administration of the colony, was modified by rules Nos 1005 and 1022 dated 7th and 26th August 1920 and decrees Nos 008 and 7030 dated 9th and 18th October. A new Organic Charter modifying in certain parts the earlier one was granted by Decree No 12,499 of 4th October 1926 and is now in force.

The territory of Portuguese India is ruled by one Governor-General, residing in the Capital of the State at Panjim alias Nova-Goa, and is divided into three districts, Goa, Daman and Diu. The last two are each under a Lieutenant-Governor. The district of Goa is under the direct superintendency of the Governor General.

Subordinate to the Governor General the following Secretariats are working: Home and Political, Finance, Customs, Education, Military, Naval, Agriculture, Health and Public Works. There are also three special and autonomous Departments, which do not constitute exclusive Secretariats, one of them being the Department of Posts and Telegraphs, the second that of Survey and the third that of the Fiscal of the W I P Railway.

As the principal organ of administration next to the Governor General and in collaboration with him works a Governor's Council (*Conselho do Governo*) with Legislative and advisory powers. The Council is constituted in addition to the Governor-General, *ex officio* President of four officials (Attorney General, the Director of Finance, the Director of Civil Administration and the Director of Public Works) five elected members (three representing *Velhas Conquistas* one the *Novas Conquistas* and one the Districts of Daman and Diu) and five members nominated by the Governor-General to represent the municipalities, agricultural, commercial and other interests and the press.

In each province of Goa, Daman and Diu, there is a District Council to supervise the Municipalities and other local institutions. The District Council of Goa is composed of the Director of Civil Administration, President, the Government Prosecutor of the Nova-Goa Civil Court, the Deputy Chief Health Officer, the Engineer next to the Director of Public Works, the Deputy Director of Finance, the Chairman of the Municipal Corporation of the Islands, one member elected by the Commercial and Industrial Associations of the district, one member elected by the 60 highest tax payers of Goa, one member elected by the Associations of Lapid-

owners and Farmers of the District, and one member advocates elected by the Legislative Council among the legally qualified.

At Damam and Diu the corresponding body is composed of the local Governor, President, the Government Prosecutor, the Chief of the Public Works Department, the Health Officer, the Financial Director of the district, the Chairman of the Municipal Corporation, two members elected by 40 highest tax payers of the District and one member elected by the Merchants, Industrialists and Farmers of the district.

Under the provisions of the above quoted Decree is also officiating in the capital of Portuguese India a administrative court tribunal to take cognizance and decide all litigious administrative matters, fiscal questions and accounts. It is named *Tribunal Administrativo Fiscal e de Contas* and is composed of the Chief Justice as President, four High Court judges, one superior Government officer who must be a Bachelor of Laws, nominated by the Government and a citizen, who is not an official elected by the Governor-General's Council. When matters regarding finances and accounts

come up for decision and discussion the Director of Finance also sits on the Tribunal.

Under the presidency of the Governor-General the following bodies are also working —

Technical Council of Public Works.—Its members are all engineers on permanent duty in the head office a military officer of highest rank in the army or navy, the Director of Finance, the Attorney-General, the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works.

Council of Public Instruction.—This Council presided over by the Governor-General is composed of five officials, the Director of Civil Administration, the Director of the Medical College, the Director of the Lyceum, the Director of the Normal School and the Inspector of Primary Schools, and four nominated members.

There is one High Court in the State of India with five Judges and one Attorney-General, and Courts of Justice at Panjim, Margao, Mapuch, Bicholim, Quepem e Damão, and Municipal Courts of Justice at Mormugão (Vasco da Gama), Pondá Diu and Nagar-Aveli.

PORT OF MORMUGÃO

Mormugão is situated towards the south of Aguada Bar on the left Bar, on the left bank of Zeary River in Lat 15° 25' N and Long 73° 47' E, about 225 miles south of Bombay and 61 miles south of Panjim, the Capital of Portuguese India. The Port of Mormugão is the natural outlet to the sea for the whole area served by the M & S M. Ry. (metre-gauge), and offers the shortest route both passenger and goods traffic. The distance from Aden to Mormugão is about the same as from Aden to Bombay. The Port is provided with light-houses, buoys and all necessary marks and it is easily accessible all the year round and at any hour of the day or night even without the assistance of a Pilot. Pilotage is not compulsory, but when usual pilot flag is hoisted, a qualified officer will board the vessel and render such assistance.

Mormugão Harbour is the terminal station of the West of India Portuguese Railway which is controlled by the Madras and Southern Maharashtra Railway Company with headquarters at Madras. Goods are shipped direct from Mormugão to any Continental Ports every facility being afforded for such direct shipments. Cargo can be unloaded from or loaded direct into Railway wagons, which run alongside steamers, thus reducing handling. Warehouses are built on the quay and have railway sidings alongside. Steamers of over 5,000 tons net register, from any Continental Ports can be discharged or loaded rapidly and in complete safety, in a working day of 10 hours 650 tons from work or 800 tons bale or bag cargo can easily be loaded or discharged. The port is provided with steam cranes and all other appliances for quick loading and discharging of vessels, one of the cranes being of 30 tons capacity for discharging heavy lifts. The tonnage, quay dues and all other charges are very low, special concessions being granted for steamers arriving from European or American Ports touching Lisbon. Fresh water can be obtained at a low cost.

The Bombay Steam Navigation Company's (Shepherd) steamers between Bombay and Mangalore call at Mormugão twice a week. The British India Steam Navigation Company's steamers between Bombay and Africa call at Mormugão at least once a month. The Elderman Steam Line maintains a regular service from Liverpool to Mormugão calling occasionally at Lisbon. This service offers every facility for shipment from the United Kingdom to stations on the M & S M. Railway under the "Combined Sea and Rail Through Bills of Lading." There are several stevedoring firms, the maximum rate for discharging or loading coal and general cargo being fixed by Government at 6 annas per ton, deadweight. Goods for British India pass through Goa without any charge being collected by Portuguese Government. British Customs duty payable at Castle-Rock can be paid by the Railway Company and collected at destination. Goods from stations on the M & S M. Ry. System to Mormugão or vice-versa are railied without transhipment, thus avoiding a second handling. Steam tugs, barges, etc., for unloading in the stream can be had at a very low charge.

With a view to promoting the economical, commercial and industrial development of Mormugão, a special Department under the designation of the "Mormugão Improvement Trust" with its head office at Vasco da Gama, 2 miles from Mormugão Harbour, has been created and the Local Government have introduced various regulations granting every facility to those intending to raise buildings for residential and industrial purposes in the whole area, comprising about 800 acres, near the Harbour. There are over 2,000 plots, each measuring between 1,000 and 2,000 square metres (each square yard = 0.8361 square metre), available for residential quarters, granted on permanent lease on each payment of 2 annas to Rs 1-8 per square metre, according to their situation, in addition to an annual payment of 4 ptes per square metre as lease-hold rent.

Within about 60 days from the date of application for a plot, the same is made over to the applicant or to the highest bidder, should there be more than one applicant for one and the same plot. The plan of buildings is in all cases subject to the approval of the Chairman of the Improvement Trust, such plan being required to be submitted within 60 days from the date the plot is made over to the lessee, and the period within which building is to be completed is 2 years. Importation of building materials is allowed free of Custom duties. In addition to the above, there is an extensive area available and reserved only for Industrial and Commercial Establishments, this area being known as "Free Zone." Within this "Free Zone," in addition to plots, which are leased at a very low rate for building factories, bonded warehouses or for establishment of any kind of Industrial or commercial concerns, in accordance with rules and regulations lately issued by the local Government, special concessions and privileges are granted, such as

(I) *For Establishment of Factories or Industrial Concerns*—All machinery, building materials, tools, raw materials, etc., required for construction, maintenance and regular working

of the Factories are permitted free of import duty, likewise export of the goods manufactured within the "Free Zone."

(II) *For Establishment of Depots of Manufactured or Unmanufactured Goods, Bonded Warehouses, etc., etc.*—All goods imported by the Concessionaire for the purpose of such depot are allowed to be exported to any Foreign territory, after being improved and repacked, if necessary, without payment of either import or export duty.

(III) *Exemption of Government Taxes.*—In addition to the above privileges, all Factories, Commercial Establishments, buildings, etc., within the "Free Zone" are exempt from all Government taxes for a period of 20 years from May 1923. Applications for any of the above concessions have to be addressed to H.E. the Governor General of Portuguese India and presented at the office of the Mormugão Improvement Trust at Vasco da Gama, giving therein full particulars of the area and plot, etc., required. Such applications are disposed of within as little time as possible. Full information can be obtained from the Mormugão Improvement Trust, Vasco da Gama.

DAMAN

The settlement of Damam lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Damam proper, lying on the coast, and the detached pargana of Nagar Aveli separated from it by a narrow strip of British territory and bisected by the B. E. & C. I. Railway. Damam proper contains an area of 22 square miles and 26 villages and has a population (1921) of 17,566 of whom 1,480 are Christians. The number of houses is according to the same census 4,095. Nagar Aveli has an area of 60 square miles and a population (1921) of 31,043 of whom only 271 are Christians. The number of houses is 6,069. The town of Damam was sacked by the Portuguese in 1581, rebuilt by the natives and retaken by the Portuguese in 1583, when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile, especially in Nagar Aveli, but despite the

ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar Aveli and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Damam carried on an extensive Commerce especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a Judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogia, on the Peninsula, separated by the channel and the fortress of Simbor about 8 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession

of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth from north to south, two miles. The area is 80 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1921, is 12,844, of whom 324 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements with certain dependent lodges, or plots. They aggregate 808 square miles, and had a total population in the first January 1930 of 288,546. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Bona, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu found ed the first Campagne d'Orient, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664 granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted without success to establish itself in Madagascar Colbert's Company again took up the idea of direct trade with India and its President Caron, founded in 1668 the Compagnie or agency at Surate. But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee, and Caron, passing over to the Coromandel coast in 1673, seized St. Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen saved out of the wreck of the settlements at Trincomalee and St. Thome he took up his abode at Pondicherry, then a small village which he purchased in 1683 from the Raja of Gingee. He built fortifications and a trade began to spring up, but he was unable to hold the town against the Dutch who wrested it from him in 1693 and held it until it was restored to the French by the Peace of Ryswick in 1697. Pondicherry became in this year and has ever since remained the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to be Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697 Martin was appointed Governor, and under his able management Pondicherry became an entrepot of trade.

Chandernagore, in Lower Bengal, had been acquired by the French Company in 1686 by grant from the Delhi Emperor. Mahé, on the Malabar Coast was obtained in 1725, under the government of M. Lenoir, Karikal, on the Coromandel Coast, under that of M. Dumas, in 1739. Yanam, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration

The military command and administration in chief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur Yvanou (François Adrien). He is assisted by a

Chief Justice and by several 'Chefs de Service' in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely Pondicherry, Ariancoppan, Modallarepeth, Oulgarot, Villenour, Throubouvane Bahour and Netapeam for the establishment of Pondicherry, Karikal, Néravy, Nedouneadour, Trunalar Grande Aïdée Ootahéry for the establishment of Karikal and also Chandernagore, Mahé and Yanam. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry and those of administrators at Chandernagore, Yanam, Mahé and Karikal, together with other headquarters charges necessarily engross a large proportion of the revenue. All the state and dignity of an independent Government with four dependent ones, have to be maintained. This is effected by rigid economy and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India and of the Missions Étrangères the successors of the Mission du Carmel founded by the Jesuits in 1716. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running via Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest of British India and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent was reorganised by a decree of 7th March, 1914. The capital Pondicherry, is a very handsome town and presents especially from the sea, a striking appearance of French civilisation.

People and Trade.

The Settlements are represented in Parliament at Paris by one senator and one deputy. The Senator is Mons. Lemoigne. The Deputy is Mons. Coponat. There were in 1929 69 primary schools and 3 colleges all maintained by the Government, with 508 teachers and 10,922 pupils. Local revenue and expenditure (Budget of 1930) Rs. 2,311,525. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 3 cotton mills, and at Chandernagore 1 jute mill. The cotton mills have in all 1,691 looms and 71,744 spindles employing 7,490 persons. There are also at work one oil factory and a few oil presses for groundnuts, and one ice factory,

The chief exports from Pondicherry are all seeds. At the ports of Pondicherry, Karikal, and Mahé in 1929 the imports amounted to Rs 8,743 048 and the exports to Rs 80,110 047. At these three ports in 1929 305 vessels entered and cleared, tonnage 129,115T.

visited by French steamers, sailing monthly between Colombo and Ceylon in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to December 1929.

PONDICHERY

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram Pondicherry branch of the South Indian Railway. The area of the Settlement is 11½ square miles and its population in the first January 1930 was 47,678. It consists of the eight communes of Pondicherry. The Settlement was founded in 1674 under François Martin. In 1693, it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1781 resulted in the capture of the place, which was restored in 1760. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where they border on the sea. The Collector of

South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government, who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the *Ville blanche* and the *Ville noire*. The *Ville blanche* has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green verandahs. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. There is no real harbour at Pondicherry; ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *mascala* boats of this coast. Facing the shore end of the pier is a statue of the great Dupleix, to whom the place and the French name owe so much.

CHANDERNAGORE

Chandernagore is situated on the bank of the Hooghly, a short distance below Calcutta. Population (in the first January 1930) 26,897. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagore has

disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Dupleix, formerly called St. Mary's Institution, founded in 1688 and under the direct control of the French Government.

KARIKAL

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The settlement is divided into six communes, containing 110 villages in all, and covering an area of 58 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1898 it was 93,055. In 1901 76,526, in 1901, 54,008, in 1923 57,023, in 1924, 56,922, in 1925, 479,663 and in 1930 59,800, but the density is still very high, being 1,063 persons per square mile. Kumbakonam is the only town in Tanjore District which has a higher density. Each of the six communes—namely, Karikal, La Grande Allee, Nedungadu, Ootcheri, Néravy and Tirunelveli—possesses a mayor and council. The members are all elected by

universal suffrage but in the municipality Karikal the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about 1½ miles from its mouth. It has a brisk trade in rice with Oeylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Paralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

The Frontiers.

By those who take a long view of politics in the wide sense of the term it will be seen that the Indian Frontier problem, which has loomed so large in the discussion of Indian questions has always borne a two fold character—the local issue and the international issue. For almost a century the international issue was the greater of the two, and the most serious question which the Indian Government, both directly and as the exponents of British Imperial policy had to face. But the tendency of later times was for the international aspect to recede and for the local aspect to grow in importance until it might be said, with as much truth as characterises all generalisations, that the local issue dominated, if it did not absorb the situation.

The Local Problem—The local problem, in its broadest outlines, may be briefly indicated before proceeding to discuss it in detail. From the Arabian Sea on the West to the confines of Nepal is a wild and troublous sea of some of the highest mountains in the world. The thin valleys in these immense ranges are poorly populated by hardy, brave, militant mountaineers, rendered the fiercer and the more difficult by professing the martial Moslem faith accentuated by the most bitter fanaticism. But apart as the population is, it is in excess of the supporting power of the country. These mountaineers in all parts of the world, these brave and fearless men have sought to eke out their exigent agriculture by raiding the rich plains of Hindustan. We may find a fairly close parallel to the situation in the position of the Highlands of Scotland until after the rebellion of 1745 the English Government of the day sought a permanent remedy by opening for the warlike Highlanders a military career in the famous Highland regiments and in rendering military operations easier by the construction of Wade's road. The Highland problem has disappeared so long from English politics that its pregnant lessons are little realised, but if the curious student will read again that brilliant novel by Neil Munro, "The New Road," he will appreciate what Wade's work meant for the Highlands of Scotland, and what lessons it teaches those who are called upon to face in its local aspect, the Indian frontier problem. So far as the area with which we are dealing was concerned, two policies were tried. In Baluchistan, the genius of Sir Robert Sandeman devised the method of entering into military occupation of the principal points, and thence controlling the country.

At the same time close engagements were entered into with the principal chiefs, through whom the tribesmen were kept in order. That policy was so successful that whilst the administration was expensive the Baluchistan frontier did not seriously embarrass the Government of India from the time when Sandeman set his mark on the land. Not that the country was entirely peaceful. Occasional tribal raids or risings necessitated occasional military operations, and the Gomal Pass was involved in the general tribal disturbances which followed the wanton declaration of war by Afghanistan in 1919. But speaking broadly, Sandeman brought peace to Baluchistan, and to the large frontier area which is embraced in that generic term. So far as this section of the frontier is

concerned it may be said that no frontier problem exists, save the need for an economical and constructive policy.

Towards Afghanistan—Far otherwise is it with the section of the frontier which stretches from Baluchistan to the confines of Nepal. That has, for three quarters of a century, been the scene of almost ceaseless military operations, which have constituted a devastating drain on the Indian exchequer. For years one sought for a definite policy guiding the actions of the Government of India. One explanation of these inconsistencies was found in the existence of two schools of thought. Once the frontier with Afghanistan had been delimited the soldiers naturally pressed for the armed occupation of the whole country right up to the confines of Afghanistan or at any rate, for military posts, linked with good communications, which would dominate the country. But those who looked at policy not only from the military standpoint, were fearful of two considerations. They felt that occupation up to the Afghan frontier would only shift the frontier problem farther North. Instead of the differing tribes we should they argued, have to meet the Afghan on our border line. If Afghanistan were a strong, homogeneous State that would be a matter of little account. But even under the iron rule of Abdurhaman Khan the Amir's writ ran but slightly in the southern confines of his kingdom. Under his successor, Habibullah Khan, whose policy was generally wise and successful, it ran still less firmly. The Amir was unable to control the organisation of the tribal gatherings which involved us in the Zakka Khel and Mohmand expeditions during the Indian secretarship; of that arch pacifist, Lord Morley. Nor did it enable Habibullah to deal effectively with a rising against his own Governor in Khost. The Afghan forces melted away under transport difficulties when they were moved against the rebellious Khostwalle, and the Amir had to make peace with his troublesome vassals. Therefore, it was said, occupation up to what is called the Durand Line because it is the line demarcated by the Frontier Commission in which Sir Mortimer Durand was the British Plenipotentiary, would simply mean that in time of trouble we should have to deal with Afghanistan instead of a tribe or two, and with the the intractable tribesmen along our difficult line of communications. There was the further consideration that financiers were of the fixed belief that even if the Forward was adopted. Policy was wise from the military standpoint it would involve charges over an indefinite period greater than the Indian finances would bear. Moreover on this section of the frontier, the position was complicated by the expansion of Russia in Central Asia. The eastern passes, and the passes down which for centuries from the time of Alexander the Great invaders have swept from Persia and Central Asia to loot the fat plains of Hindustan traverse this region. Therefore it was deemed essential to control, if not to occupy them, in the interests of the Imperial situation. In this zone therefore policy ebbed and flowed between the Forward

School which would have occupied, or dominated, the whole Frontier up to the Durand Line that is to say up to the Afghan frontier and the Close Border School, which would have us remain out of the difficult mountains some and meet the tribesmen on the plains if they sailed forth. The extreme advocates of this school would even have us return to the line of the Indus.

The Two Policies.—The result of this conflict of opinion was a series of wavering compromises, which like all compromises was profoundly unsatisfactory. We pushed forward posts here and there which irritated the Tribesmen and made them fearful of their prized independence without controlling them. These advanced posts were in many cases inadequately held and rarely were they linked with their supporting posts by adequate means of communication. We preserved between our administrative frontier and the Durand Line which demarcated our frontier with Afghanistan an irregular belt of land called 'The Independent Territory', in which neither was nor the Afghan Government exercised jurisdiction. This was left entirely under the control of the tribes who peopled it. Now it was often asked why we did not follow the precedent of Baluchistan and Sindhanesha the Independent Territory. That was one of the perennial topics of Frontier discussions. But stress was laid upon the essential differences between this zone and Baluchistan. Sir Robert Sandeman found a strong tribal system existing in Baluchistan and he was able to enter into direct engagements with the tribal Chiefs. There is no such tribal organisation in the Independent Territory. The tribal Chiefs or maliks, exercise a very precarious authority and the instrument for the collective expression of the tribal will is not the chief but the Jirga, or tribal council, of the most democratic character where the voice of the young men of the tribe often has the same influence, in time of excitement perhaps more influence, than the voice of the wiser greybeards. The bitter fruit of this policy of compromise was reaped in 1897 when following a minor outbreak in the Tochi Valley the general uneasiness flamed into a rising which involved the whole of the North West Frontier from the Gomal to the borders of Nepal. A force over thirty thousand strong had to be mobilised to deal with it. Even this large force owing to the immense difficulties of transportation was unable effectively to deal with the situation, though peace was made. The emergency thus created synchronised with the advent of Lord Curzon as Viceroy. He dealt with it in masterful fashion. In the first place, he separated the frontier zone from the Government of the Punjab, which had hitherto been responsible for its administration and had organised for the purpose a special force of Frontier soldiers, known as the Punjab Irregular Frontier Force. This was the revival of a scheme as old as the Viceroyalty of Lord Lytton, though no other Viceroy had been able to carry it through, in the face of the strong opposition of successive Punjab Governments. This area so separated was constituted into a separate administrative zone under the direct authority of the Government of India, exercised through a Chief Commissioner. Then Lord Curzon withdrew the advanced military posts and concentrated the Regular troops in bases better linked with the main

military centres of India by roads and railways. The advanced posts, and especially important Passes like the Tochi, the Kurram and the Khyber, were entrusted to the defence of local militia, recruited from the tribesmen themselves, and officered by British officers drawn from the ranks of the Indian Army. Later it was supplemented by a new development policy. The construction of the Upper Swat Canal afterwards developed into the Swat Canal (or Irrigation) led to such an increase in cultivation that the tribesmen were given a means of livelihood and were invested with the magic charm of valuable property. The irrigated part of the Frontier has since been one of the most peaceful in the whole border line.

Lord Curzon's Success.—Judged by every reasonable standard the Curzon policy was successful. It did not give us complete peace. There were occasional punitive expeditions demanded, such as for instance the Zaka Khel and Mohmand expeditions and the Waziris and in particular the truculent Mahsud Waziris never ceased raiding. But in comparison with what had gone before it gave relative peace. It endured throughout the Great War, though the Waziris built up a heavy bill of offences, which awaited settlement when Government were free from the immense preoccupations of the war. It broke down under the strain of the wanton invasion of India by the Afghans in the hot weather of 1919. On February 20th the Amir Habibullah Khan was assassinated in his sleep near Jelalabad. Although he does not figure so prominently in frontier history as his son father Abdurrahman Khan, he nevertheless has high claims on the favourable verdict of history. None anticipated that any successor to Abdurrahman Khan could hold in the leash of a single State the fractious, fanatical tribes who make up the population of the Afghan kingdom. Yet this Habibullah did. On occasions his attitude seemed to be equivocal, as when armed gatherings of the tribes called lashkars were permitted to assemble in Afghan territory and to invade the Independent Territory causing the Zaka Khel and Mohmand expeditions. But we must not judge a State like Afghanistan by European standards, the Amir had often to bow before the fanatical elements amongst his own people until they had burnt their fingers by contact with the British troops. At the outset of the Great War he warned the Government that he might often have to do things which seemed unfriendly, but they must trust him. In truth the position of the Amir when Turkey entered on the war, and called Moslems everywhere to arms on the side of Germany was extraordinarily difficult. He received Turkish, German and Austrian missions in Kabul from which British representatives were still excluded. But he kept Afghanistan out of the war, and with the complete defeat of the Central Powers and their satellites, his policy was justified up to the hilt. Indeed, his success was the cause of his assassination. The irreconcilable elements in the Kingdom saw that the day of reckoning had come and strove to avert the settlement of their account by the murder. When he was done to death, his brother, Nasrullah Khan, was proclaimed Amir by the assassins. But the conscience of Afghanistan revolted against the idea of Nasrullah, the arch-fanatic of the ruling House of Kabul, ascending

the throne over the blood-stained corpse of his brother. A military movement in Kabul itself brought him aside and installed the son of Habibullah, Amanullah Khan, on the throne. But Amanullah Khan soon found it was a thorny bed on which he lay, and encouraged by the disorders in India which followed the passing of stringent measures to deal with anarchical crime set his troops in motion on April 25 1919, and proclaiming a jihad promised his soldiers the traditional loot of Hindustan. The Indian Army was at once set in motion, and as has always been the case the regular Afghan Army was easily beaten. Dacca was seized, Jalalabad and Kabul were frequently bombed from the air, and there was nothing to prevent our occupation of Kabul save the knowledge gleaned from the bitter heritage of the wars of 1838 and 1878 that it is one thing to overact a government in Afghanistan but it is quite another to set up a stable government in its stead. The Government of India wisely held their hand and the Afghans having sued for peace a treaty was signed on the 8th August 1919.

But an untoward effect of this wanton war was to set the frontier from the Gomal to the Khyber ablaze. With one or two exceptions, the Tribal Militia could not stand the strain of an appeal from their fellow tribesmen, and either melted away or joined the rising. This has often been described as the failure of the Curzon policy, which was based on the tribal militia. But there is another aspect to this issue which was set out in a series of brilliant articles which Mr. Arthur Moore, its special correspondent, contributed to *The Times*. He pointed out that the militia was meant to be a military police force. The lapse of time, and forgetfulness of its real purpose, had overruled the militia into an imitation of the regular army. The militia was meant to be a police. When the war broke out the units were treated as a covering force behind which the Regular Army mobilised. This is a role which it was never intended they should serve, exposed to a strain which they should never have been called upon to bear they crumpled under it. If on the outward of trouble troops had promptly hurried to their support all might have been well. Left to look after themselves with no sign of support, they found themselves too weak to hold their positions and militarily their only course was to retire from the midst of their own kinsmen as the soul of revolt surged towards them. They would not take it.

Russia and the Frontier—The Curzon policy was up to the time of its collapse greatly assisted by extraneous events. The greatest external force in moulding Indian frontier policy was the long struggle with Russia. For nearly three quarters of a century a veiled warfare for predominance in Asia was waged between Great Britain and Russia. There are few pages in British foreign policy less attractive to the student of Imperial affairs. Russia was confronted in Central Asia with precisely the same conditions as those which faced England in India when the course of events converted the old East India Company from a trading corpora-

tion into a governing body. The decaying khanates of Central Asia were impossible neighbours. Confronted with an inferior civilisation, and with neighbours who would not let her alone, Russia had to advance. True, the adventurous spirits in her armies, and some of the great administrators in the Tsar's capital were not adverse to paying off on the Indian Borderland the score against Great Britain for the Crimean War, and for what the Russians thought was depriving them of the fruits of their costly victory over Turkey in 1877-78. The result was a long and unsatisfactory guerrilla enterprise between the hardiest spirits on both sides accompanied by periodic panics in the British Press each time the Russians moved forward which induced the ceding, after the Russian occupation of Merv, of the generic term 'Mervousness'. This external force involved the Government of India in the humiliations of the Afghan War of 1838, with the tragic destruction of the retiring Indian force between Kabul and Jalalabad, slightly relieved by the heroic defence of Jalalabad and the firmness of General Pollock in refusing to withdraw the punitive army until he had set his mark on Kabul by the razing of the famous Dula Bazar fortress. It involved us in the second Afghan War of 1878, which left the baffling problem of no stable government in Afghanistan. There was a gleam of light when Abdurrahman Khan whom we set up at Kabul to relieve us of our perplexities proved himself a strong and capable ruler, if one ruthless in his methods. But in the early eighties the two States were on the verge of war over a squabble for the possession of Fendeh and then men began to think a little more clearly. There began a series of boundary delimitations and agreements which clarified the situation without however finally settling it. The old controversy broke out in another form when intrigues with a Buddhist monk, Dorjief, during Lord Curzon's viceroyalty, gave rise to the grave suspicion that the scene had only shifted to Tibet. An expedition to Lhasa rent the veil which had so long concealed the mysterious city and dispersed the miasma of this intrigue. But it was not until the conclusion of the Anglo-Russian agreement of 1907 that the two countries arrived at a stage long sought by those who looked beyond their noses. The actual authors of the Agreement were Lord Grey, the Foreign Secretary and Lord Hardinge, formerly British Ambassador in Petrograd, but it had been desired by their predecessors, whose efforts were rendered nugatory by the intransigent attitude of the dominant forces in Petrograd. It was not until Russia was chastened on the battlefields of Manchuria by Japan and disappeared as a sea power in the decisive battle of Tsushima, that an atmosphere was created favourable to the conclusion of an Agreement. This embraced the whole frontier zone. There were many unsatisfactory features in the Agreement, especially in regard to Persia for which we had to pay a considerable price in the attitude of Persians in the War. But again taking long views, the Agreement fully justified itself in a broad definition of the interest of the two countries, which put an end to the period of excursions and alarms up to the outbreak of the War. Russia then ceased to be a material factor in

the Indian Frontier Problem With the establishment of the Soviet Oligarchy in Moscow uneasiness has returned for the geographical and allied circumstances which influenced the policy of the Tsarist regime exert precisely the same pressure upon its successor and the Soviet have a troublesome motive which the Tsars had not their aim to produce world revolution is avowed and Britain and the Constitutionalism for which she stands are the greatest obstacles in their path

German Influence—As nature abhors a vacuum so in the case of States bordered by higher civilisations no sooner does one strong influence recede than some other takes its place. Long before the signing of the Anglo-Russian Agreement the shadow of the German menace had begun to appear on the horizon imitative, not creative, in this as in most other activities, the Germans adapted their methods from the penetration by railway which was so marked a feature of Russian expansion in Manchuria, brought to an end by the disastrous issue of the war with Japan. The seeds of the German effort were sown when the Kaiser, extending the hand of Christian fellowship to the Sultan of Turkey, Abdul Hamid, at a time when that sovereign was ostracised by Europe for his direct complicity in the massacre of Armenians, or rather one of the massacres of Armenians, made German influence supreme at Constantinople. His theatrical tour through Palestine which was generally treated in Europe as an exhibition of opera bouffe, soon bore fruit in the acquisition by German interests of the principal railways in Anatolia. Later it fructified more effectively in the Baghdad Railway concession, under which German interests secured the right of extending the Anatolian line from the port of Haider Pasha, opposite Constantinople, to a port in the Persian Gulf. Now successive British Statesmen of both parties had declared that the acquisition of a territorial foot hold in the Persian Gulf by any power—Russia and the port of Bandar Abbas being then in view—would be regarded as an unfriendly act. There followed a replica of the period of alarms and excursions which had disfigured our relations with Russia. Undaunted, even when their endeavour to secure British co-operation in the enterprise failed and when the Revolution in Turkey which set the Committee of Union and Progress in power entailed a temporary interruption of their influence at Constantinople, the Germans pressed forward with their enterprise. They pushed the Anatolian railways as far east as Boursulu, and constructed a line northwards from Baghdad to Samarra. They sent a mission to explore the potentialities of the port of Koweit in the Persian Gulf, and set the Turks in motion to subordinate the Sheikh of Koweit to direct Turkish sovereignty, with a nominal view to extending the Baghdad railway from Basra to Koweit, or the vicinity of Koweit at the deep water inlet behind Bubian Island. They commenced the most difficult part of the work in piercing the Amanus and Taurus ranges by a series of tunnels, and laid the rails on the other side of the mountains across the Euphrates to Ras-al Ain. Behind this railway activity stood a grandiose policy, which is indicated in what became known in Germany as "B.B.B"—Berlin, Byzantium, Baghdad

Throughout the progress of these schemes, which did not stop short of Baghdad, but were directed through a port in the Persian Gulf at India, the Germans were anxious to secure the co-operation of Great Britain, if they could do so on their own terms, that is to say without affecting the enterprise as a dominant German adventure. Shortly before the commencement of the war the protracted negotiations with London which had this end in view ended in a definite agreement between the two Powers. Under this agreement the Gulf section of the line was to have been British and the other portion German. But this agreement which had not been signed became waste paper with the outbreak of the war and the German plans vanished in thin air with the complete defeat of Turkey and Germany. Nevertheless the railway did not stand still during the war. Germany made immense efforts to complete the difficult tunnel sections and the work was substantially finished when the Armistice was signed.

The Significance of the Baghdad Railway—The real significance of the Baghdad Railway was little appreciated in Great Britain. It was constantly pictured as a great trunk line, which would short circuit the traditional British dominance by sea and absorb the passenger and goods traffic from the East. This idea could only be nourished by those completely ignorant of the conditions of the Indian passenger service and the essentials of a competitive route for the carriage of merchandise. The rush of passenger traffic from India is from April to June in order to escape the hot weather in India and the return traffic is spread over the period of from October to January. From April to June the heat in Mesopotamia is appalling. To imagine that the passenger traffic from India would turn from the easy and comfortable as well as fairly expeditious sea route from Bombay to Marseilles and thence by the easiest railway travelling outside the British Isles to Calais and London for such a land route was an amazing chimera. The Baghdad route would have involved a sea voyage from Bombay or Karachi to Koweit or Basra then a journey across the burning plains of Mesopotamia and Asia Minor to Haider Pasha, then across the Straits to Constantinople and finally right across Europe to a North Sea port. This would in any circumstances have been a costly freak journey in comparison with the sea route. Then as for the commercial aspect of the line, the natural port of the Middle East is Basra. The sea freight from England or Germany to Basra, is about one pound sterling a ton before the war it was often down to fifteen shillings. The freight from Basra to Baghdad was from thirty shillings to two pounds a ton. To imagine again that merchandise would desert this route for a land and sea route which would have involved a double break of bulk at Constantinople and Haider Pasha, is again a chimera. The freight charges could not have been less than fifteen to twenty pounds a ton.

As a through route the primary purpose of the Baghdad Railway was strategic. It was designed to make the Power seated at Constantinople—and that Power the Germans—were resolved should be Germany—complete master of Asia Minor and The Middle East and the route selected, often criticised, was the best for the rapid

movement of troops to the strategic centres. As a commercial line, the Railway, if completed, would have served three zones. The western area of Turkey in Asia at Haider Pasha. The rich lands of Anatolia at Alexandria. The eastern zone at Basra. The Germans, it is understood, attached immense importance to the subsequent engagements with Turkey which placed them in maritime command at Alexandria. They began to inaugurate a commercial position in the Persian Gulf through the establishment of a subsidised line of steamers run by the great Hamburg America corporation. They strove to obtain an actual footing in the Gulf through the German house of Woukhaus. We doubt if the Germans were ever serious in their alleged designs on Koweit, which could never have borne a more definite relation to the commerce of the Gulf than Flushing to Antwerp or Cuxhaven to Hamburg, that was one of the red herrings they drew across their trail to divert attention from their real objective Basra which is destined by virtue of an unchallengeable geographical and natural position to be the great port of The Middle East. These considerations have no more than an academic value now. Germany was defeated. The Turks when they emerged from an isolated military Isolationism based on Angora, were confronted with the immense problem of rebuilding their bankrupt State. deprived of the most intelligent section of the old population—the Greeks and the Armenians by massacre and expulsion—were a very different factor. The completion of the through line was indefinitely postponed. But as the advantages of the route, for the purposes we have indicated are many and great, the ultimate construction of the through line is only a matter of time so we have placed these authoritative characteristics on record for the guidance of opinion when the project of the through route is revived, as it must be.

Turkey and the Frontier—The position of Turkey on the Indian frontier was never of any considerable importance in itself, and never assumed any significance, save as the *crucial* *courier* of Germany when she passed under the tutelage of that Power and for a limited period during the war. Although so long established in Mesopotamia, Turkey was not very firmly seated in that country, the Arabs tolerated rather than accepted Turkish rule so long as they were substantially left alone and the administration, it is understood, never paid its way. For a brief period Midhat Pasha raised the status of Mesopotamia, and after the Revolution that fine soldier Nasim Pasha became a power in the land. But speaking broadly Turkey remained in Mesopotamia because it was no-one's interest, even that of the Arab, to turn her out. When however Germany developed her 'B B B' policy, Turkey was used as a stalking horse. She moved a small force to the Peninsula of Al Kadr in order to frighten the Sheikh of Bahrain, and tried to convert the nominal suzerainty exercised, or rather claimed, over the Sheikh of Koweit into a *de facto* suzerainty, exercised by military force. These efforts faded before the vigorous action of the British Government which concluded a binding arrangement with the Sheikh of

Koweit, and the position of the Turks at Al Kadr was always very precarious. On the outbreak of the war however the situation profoundly changed. When the sound and carefully executed expedition to Basra and its strategic hinterland was developed into the insane enterprise to capture Baghdad by *coup de main*, with very inadequate forces, and still more inadequate transport we found ourselves involved in military operations of the most extensive and unprofitable character. These were completely successful with General Maude's occupation of Baghdad. After the Russian *debacle* we found ourselves involved in a new front, which stretched from the Euphrates to the wildest part of Central Asia, producing military exploits of an almost epic character but exercising little influence on the war. They were brought to an end by pressure not on extensive wings, but at the heart of Turkish Power in Palestine, where Lord Allenby scattered the Turks like chaff. But the aftermath of the war left us in an indefinite position in Mesopotamia with indefinite frontiers. This enabled the Turks, if they were so disposed to be troublesome through guerilla warfare in the Mosul zone, and by stirring up the Kurds who are the Ishmaelites of Asia Minor. The conclusion of the Treaty of Lausanne in 1923 brought temporary relief, but it did not settle the main issue, the frontier between Turkey and Iraq. Under the Treaty it was provided that if the two parties could not agree to a boundary line delimitation should be left to The League of Nations. Negotiations were promptly opened at Constantinople but it was immediately found that there could be no mutual agreement. The Turks demanded the whole of the Mosul vilayet, and the British delegates declared that Mosul and its hinterland were necessary to the existence of Iraq. The issue therefore went to the League of Nations. That body despatched a neutral commission to study the position on the spot. This commission reported that the best settlement would be for the Mosul vilayet to be incorporated in Iraq, if the British Government were prepared to prolong its mandate over that State for a period of twenty five years. When the report of this commission came before the League in 1925 Britain gave the necessary guarantee and the Council of the League unanimously allotted the Mosul vilayet to Iraq. The Turkish delegates, who at first recognised the decisive authority of the League then declared that they would not be bound by its decisions. So the matter rested at the end of the year, with Iraq in occupation of the disputed up to the temporary frontier, which is known as The Brussels Line. After at first breathing nothing but armed resistance to acceptance of the award the Turks afterwards assumed a more conciliatory note and alarmed, it may be, by the threat of Italian aggression accepted the frontier line demarcated by the League.

France and the Frontier—If we touch for a few sentences on the position of France on the frontier of India, it is not because they have any present day significance, but in order to complete this brief survey of the waxing and waning of external influences on Indian frontier policy. It is difficult to find any sound policy behind the efforts of France to obtain a coaling station at Maskat, in the Persian Gulf, and her

long opposition to the steps necessary to extinguish the slave trade and hold in check the immense traffic in arms which was equipping all the tribesmen on our North West Frontier with rifles of precision and a large supply of ammunition. We can find no more definite purpose in it than a general pin-pricking policy, a desire to play the part of *Buena*, and perhaps a source of annoyance to Great Britain, which would form a useful lever for the extraction of considerable concessions in West Africa, particularly in the neighbourhood of Gambia, as the price of abatement. These embarrassments were slowly removed one by one after the conclusion of the Anglo-French Entente. Far otherwise was it in the East. The consolidation of French authority in French Indo-China was the prelude to designs for the expansion of this authority at the expense of Siam and to find compensation there for the reduced British protectorate of Egypt. There had earlier been mutterings in Burma. We were established in Lower Burma in the thirties and in the eighties the foolish and tyrannical King Theebaw in Upper Burma became an impossible neighbour and ambitious Frenchmen were not averse to fanning his opposition to the British. However, if any hopes were entertained of extending the Asiatic possessions of France in this direction they were dissipated by the Second Burmese War and the firm establishment of British rule. Far otherwise was it on the confines of Siam. It was the fixed purpose of British policy to preserve Siam as a buffer state between Burma then a regular Province of the Indian Empire and French Indo-China. This policy was definitely challenged by French encroachments on Siam. Matters approached a crisis in 1894, and we were within measurable distance of a situation which might have ended in open war between the two States. But as in the case of Persia and later when Major Marchand marched across Africa to Fashoda, the influence of goodwill made statesmen on both sides ask themselves what they might be going to fight about. They found there was nothing essential and an agreement was negotiated between the two Powers, which secured the independence and integrity of Siam. That agreement has been consolidated by wise and progressive rule in Siam itself under its own independent sovereign, who is imbued with a strong friendship for Great Britain whilst at the same time maintaining good relations with French neighbours.

The New Frontier Problem.—The whole purpose of this brief sketch has been to show that for three generations—most assuredly since the events leading to the Afghan War of 1839—the Indian frontier problem has never been a local problem. It has been dominated by external influences—in the main the long struggle between Great Britain and Russia, for a brief period the German ambition to build up a dominant position in the East through the revival of the land route and to a much lesser extent by the ambitions of France and Turkey. The circumstances affecting the Frontier from centre beyond it have greatly changed. Old dangers have disappeared. And generally, conditions have become more like those normal to critical land frontiers anywhere in the world in this present time of swift

communications, serial operations and easy propaganda. Consequently a great deal of new attention is necessarily being directed to local aspects of the general problem. The tribesman was always an opponent to be respected. Brave, hardy, fanatical, he has always been a first class fighting man. Knowing every inch of the inhospitable country to which punitive operations must of necessity take place, he has hung on our rearwards and given them an infinite of trouble. Even when armed with a fowl and when every cartridge had to be husbanded with jealous care the tribesman was a respectable antagonist. Now the tribesman are everywhere armed with magazine rifles, either imported through the Persian Gulf when gunrunning was a thriving occupation stolen from British magazines or secured from Russian and Afghan sources. They have an abundant supply of ammunition. Considerable numbers of the fighting men have been trained in the ranks of the Indian, my either as Regulars in the Pathan regiments or else in the tribal militias. We found this to our cost in the events following the Afghan War of 1919. The Afghan regular army was of little account. The tribesmen who rose at the call of the Jihad, especially in Waziristan, were of great account. They gave our troops the hardest fighting they have ever had on the Frontier, their marksmanship and fire discipline were described by experienced soldiers as admirable. The tribal militia the keystone of the Curzon system, had for all practical purposes disappeared, what was to take its place?

Immediately following the Afghan War, the frontier positions were garrisoned by regular troops, but this was only a temporary measure. It may be said that the crux of the situation was in Waziristan. This sector of the Frontier has always been the most difficult of the whole, because of the intractable character of the people, and of their inveterate raiding activities. Besides possessing a bolt hole into Afghanistan they had in the past evaded effective punishment. In view of the complete disappearance of the external menace and the consequent lapsing of any necessity to preserve open lines of communication which would enable us to go to the support of Afghanistan, now formally recognised in the Treaty of 1921 as a completely independent State, there were many who urged the desirability of complete withdrawal, even to the line of the Indus. This extreme school gained little support. Our position in Quetta on the one side and Peshawar on the other is fully consolidated and no good case could be made out for withdrawing from it. On the other hand, there was a strong case made out for leaving the tribesmen severely alone from the Gomal to the Kurram, and dealing with them if they emerged from their fastnesses. The military standpoint was that the Waziris are absolutely intractable, that it was unfair to impose on troops the frequent necessity of punitive operations in most arduous conditions and that the only solution of the question was the occupation of dominant points in Waziristan, as far north as Laddha, and linking these posts with our military bases and particularly with the termini of the Indian frontier railways, by good motor roads.

This controversy lasted long. It has resulted in a typically British compromise which specially arose from the changed conditions in which we found ourselves in 1922 when our troops were in occupation of Waziristan as a result of the operations forced upon us for the suppression of the tribal outbreak which the Afghans stirred up in support of their invasion of India in 1919. The present policy has been aptly described as the half forward policy. There has been no withdrawal in the ordinary sense of the term, but the limit of the North Waziristan occupation has been fixed at Hamrak not at Ladlha. A network of consoling roads has been pushed forward. Its

elaboration continues. In South Waziristan Wana has been re-occupied, partly in response to a pressing invitation from the Wana Wazirs because they wanted to share the benefits which they saw British occupation to be bringing to their cousins northward of them. The work of control and of civilisation is rapidly progressing in the whole territory. But of this particulars are given on 272 and following pages.

The main Indian rail head, which for many years terminated at Jamrud at the easterly entrance to the Khyber Pass, was in the autumn of 1925 extended to Landi at the opposite end of the Pass and within a mile of the frontier between India and Afghanistan.

I—THE PERSIAN GULF.

From what has gone before it will be seen that the keynote of this discussion of Indian frontier policy is that the external menace has largely disappeared. No part of the frontier is more powerfully influenced by this consideration than the Persian Gulf. Our first appearance in the Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, the supercession of the land by the sea route and the appearance of anarchy in the interior the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace. This work it quietly and efficiently performed. Piracy was stamped out, the Trucial Chiefs who occupy the Pirate Coast were gradually brought into close relations with the Government, the vessels of the Royal Navy kept watch and ward, and our consuls regulated the external affairs of the Arab rulers on the Arab coast. In return for these services Great Britain claimed no selfish advantages. The waters of the Gulf were kept free to the navigation of the ships of all nations, and though Great Britain could have made any territorial acquisitions she pleased she retained possession of only the tiny station of Basidu. Left to herself Great Britain desired no other policy, but for a quarter of a century the Gulf was involved in European affairs. France sought to acquire a coaling station at Jass, near Maskat, and obstructed the efforts of the British Government to stamp out the slave trade and to check the immense traffic in arms which was equipping the tribes on our land frontier with weapons of precision and quantities of ammunition. All causes of difference were gradually removed by agreements following the Anglo-French Entente. Russia sent "one of her finest cruisers to show the flag" in the Gulf, and established consular posts where there were no interests of protection. She was credited with the intention of occupying a warm water port, and in particular with casting nervous eyes on the most dreadful spot in the Gulf, Bandar Abbas. This menace declined

after the signing of the Anglo-Russian Agreement and disappeared with the collapse of Russian power following the Revolution. Then Turkey, either acting for herself, or as the *agent courier* of Germany under whose domination she had passed began to stir. She threatened the Shakh of Bahrain by the armed occupation of the peninsula of Al Kahr and moved troops to enforce her suzerainty over Kuwait, the best port in the Persian Gulf and a possible terminus of the Baghdad Railway. Further to consolidate her interests, or to stake out a claim, Germany sent the heavily subsidised ships of the Hamburg-America line to the Gulf, where they comported themselves as the instruments of Imperial policy rather than as inoffensive merchantmen. She also strove, through the agency of the firm of Winkhaus, to acquire a territorial footing on the island of Sharjah. These events stirred the British Government to an unusual activity in the waters of the Gulf.

Counter Measures

The first effective steps to counter these influences were taken during the vigorous vice-royalty of Lord Curzon, who visited the Gulf during his early travels and incorporated a masterly survey of its features in his monumental work on Persia. He appointed the ablest men he could find to the head of affairs, established several new consulates, and was instrumental in improving the sea communications with the Gulf ports. The British Government also took alarm. They were fortified in their stand against foreign intrigue by the opinion of a writer of unchallenged authority. The American Naval writer, the late Admiral Mahan, placed on record his view that Concession in the Persian Gulf, whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control will imperil Great Britain's naval position in the Farther East, her political position in India, her commercial interests in both, and the Imperial tie between herself and Australasia. The Imperial standpoint, endorsed by both Parties in the State, was set out by Lord Lansdowne in

words of great import—“We (i.e., His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests, which we should certainly resist with all the means at our disposal. The negative measures following these declarations were followed by a constructive policy when the oil fields in the Bakhtiari country, with a great refinery, were developed by the Anglo-Persian Oil Company in which the British Government has a large financial stake. But with the disappearance of these external forces on Gulf policy as set out in the introduction to this section, the politics of the Persian Gulf recoded in importance until they are now more than they were before these external influences developed, a local question, mainly a question of police. They are therefore set out more briefly and those who desire a complete narrative are referred to the Indian Year Book for 1928, pp. 178-138.

Maskat

Maskat, which is reached in about forty eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim which is the real entrance to the Gulf, but its natural strength and his torical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

Formerly Maskat was part of a domain which embraced Zanzibar, and the islands of Kish and Larak, with Bander Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast controlled by the six Trucial Chiefs. The ill name of this territory has now ceased to have any meaning but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations

of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection.

The commercial importance of the Pirate Coast is increasing through the rise of Debal. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia drove this traffic from Lingah to Debal. The Trucial Chiefs are—Debal, Abu Thabeeb, Shargah, Ajman, Um-al-Gawain and Ras-el-Khaysma.

Bahrain.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrain. Of this group of islands only those of Bahrain and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be landed on the donkeys for which Bahrain is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds makes the Sheikh the richest ruler in the Gulf.

In the neighbourhood of Bahrain is the vast burying ground which has hitherto baffled archaeologists. The generally accepted theory is that it is a relic of the Phoenicians, who are known to have traded in these waters.

Political Agent Captain C G Prior

Koweit

In the north west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is a possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chenevix selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to a pair of horns—at the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea for the mariners of Koweit are noted for their boldness and hardihood.

Political Agent Lt-Col H R P Dixon, CIE

Muhammarah.

On the opposite side of the entrance to the Shatt-el Arab lie the territories of Sheikh Khazal of Muhammarah. The town, favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Memar, Lynch

Brothers. This route provides the shortest passage to Isfahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammarah for the oil which they win in the rich fields which they have tapped near Ahwas. Its importance will be still further accentuated by the opening of the railway to Khorramabad by way of Dizful which is now under construction.

Vice Consul at Ahwas Mr H. R. D. Gibbon—
Monyenny

Basra

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the present sea terminus of the Baghdad Railway. It stands on the Shatt-el Arab, sixty miles from its mouth, favourably situated to receive the whole waterborne trade of the Tigris and Euphrates Rivers. The local traffic is valuable for the richness of the date groves on either side of the Shatt-el Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route via Kerman shah and Hamadan.

The political destinies of Basra are at present wrapped up with the destinies of the new Arab State which we have set up in Mesopotamia under King Faisal. When the war was over we found ourselves committed to immense, undefined and burdensome responsibilities in that land. The sound concepts which dictated the original expedition were dislocated in the foolish advance to Baghdad, then the great military enterprises necessitated by the fall of Kut-al Amara carried our frontier north to Mosul and the mountains of Kurdistan, east to the Persian boundary and west to the confines of Trans-Jordan. Amongst ardent Imperialists there was undoubtedly the hope that this immense area would be in one way or another an integral part of the British Empire. The cold fit followed when the cost was measured, and the Arabs rose in a revolt which showed that any such domination could only be maintained by force of arms and that the cost would be prodigious. Under these circumstances King Faisal was imported from the Hedjaz and installed on the throne under the aegis of Great Britain. Still we were committed to the support of the new kingdom, and that most dangerous condition arose—responsibility without any real power unless King Faisal was to be a mere puppet. Immense expenditure and indefinite military commitments. In these circumstances there was an insistent demand for withdrawal from the land. British policy moved slowly towards that end, but a definite step was taken in 1923. The Secretary of State for the Colonies announced this policy in a statement which is reproduced textually for the purpose of reference. Addressing the House of Lords on May 3rd he said—

Your Lordships will remember that the Cabinet have been discussing this matter for some time and decisions have now been taken

Sir Percy Cox has accordingly been authorized by His Majesty's Government to make an announcement at Baghdad the terms of which I propose to read out to Your Lordships. This announcement was drawn up in consultation with King Faisal and his Government, and has their cordial assent. It is being published at Baghdad to-day.

The announcement is as follows—

It will be remembered that in the autumn of last year, after a lengthy exchange of views, it was decided between the Governments of His Britannic Majesty and His Majesty King Faisal that a Treaty of Alliance should be entered into between His Britannic Majesty and His Majesty the King of Iraq. This Treaty which was signed on the 10th October, 1922, and the term of which was to be twenty years (subject to periodical revision at the desire of either party) provided for the establishment of an independent Constitutional Government in Iraq enjoying a certain measure of advice and assistance from Great Britain of the nature and extent indicated in the text of the Treaty itself and of subsidiary Agreements which were to be made thereunder.

Since then the Iraq Government has made great strides along the path of independent, and stable existence and has been able successfully to assume administrative responsibility, and both parties being equally anxious that the commitments and responsibilities of His Majesty's Government in respect of Iraq should be terminated as soon as possible, it is considered that the period of the Treaty in its present form can conveniently be shortened. In order to obviate the inconvenience of introducing amendments into the body of a Treaty already signed it has been decided to bring about the necessary modifications by means of a protocol which like the Treaty itself, will be subject to ratification by the Constituent Assembly.

Accordingly a protocol has now been signed by the parties in the following terms—

It is understood between the High Contracting Parties that, notwithstanding the provisions of Article 18 the present Treaty is to terminate upon Iraq becoming member of the League of Nations and in any case not later than four years from the ratification of peace with Turkey. Nothing in this protocol shall prevent a fresh agreement from being concluded with a view to regulate the subsequent relations between the High Contracting Parties, and negotiations for that object shall be entered into between them before the expiration of the above period.

It will be noticed that under this protocol the Treaty in its present form is to terminate on the entry of Iraq into the League of Nations or in four years, whichever may be earlier.

The position of Iraq as regards the League is that when the Treaty has been ratified His Britannic Majesty will be bound under Article 6 to use his good offices to secure the admission of Iraq to membership of the League of Nations as soon as possible. His Majesty's Government will be in a position to take this step on the fulfilment of the two following essential conditions, namely, the delimitation of the frontiers of Iraq, and the establishment of a stable government in accordance with the Organic Law

Under the Treaty of Lausanne between Turkey and the Powers which was signed in 1923, it was agreed that the frontier between King Faisal's State and Turkey, the important frontier because the future of Mosul was in dispute should be settled by the League of Nations, should Great Britain and Turkey be unable to come to agreement by direct negotiation. These direct negotiations were opened at Constantinople, but no agreement was reached so the question was opened before the Council of the League in September 1924. Whilst the matter was under discussion complaint was made by Great Britain that Turkey had violated the provisional frontier drawn in the Treaty of Lausanne and certain irregular hostilities were carried on in the disputed zone. This matter too was remitted to the League and a further provisional boundary was drawn, which was accepted by both parties.

Here the matter remained until the autumn of 1925. In order to secure the material for a decision the League of Nations despatched a neutral commission to Mosul to investigate the situation. This commission produced a long and involved report, but one which led by devious paths to a common sense recommendation. It was that the first essential in the Mosul vilayet is stable government. The desires of the people were for incorporation in the State of Iraq. If therefore the British Government was willing to extend its mandate over Iraq for a further period of twenty-five years—a guarantee of stable government—then Mosul should be incorporated in Iraq. If Britain was not willing then Mosul should return to Turkey. When the matter came before the Council of the League Great Britain gave the necessary guarantee. The Turks thereupon challenged the whole competence of the Council to give an award under the terms of the Treaty of Lausanne. The issue was remitted to the Court of International Justice at The Hague which decided in favour of the competence of the Council. About this time there was published the report of a distinguished Ethiopian General, General Leindoner, who had been despatched by the League to investigate allegations of brutality by the Turks in deporting Christians from their own zone, and this report was of the most damning character. Great Britain having given the necessary assurance that she was prepared to extend her mandate over Iraq for a further twenty-five years, thereupon the Council of the League allocated the whole of the area in dispute, right up to the temporary frontier—commonly called The Brussels Line—to Iraq. The Turks refused to accept the award and withdrew from Geneva threatening force. Later wiser counsels and in 1926 Turkey accepted a frontier substantially as drawn by the League. A formal treaty was concluded between Great Britain and Iraq extending the mandate for a further twenty-five years. The British Government express the hope that a shorter period will be sufficient to see Iraq on its feet as an independent and stable State, and the present policy of H. M. Government is to establish this independence at the earliest possible date.

A New Treaty.—A new Treaty regulating the relations of Iraq with Great Britain, the Man-

datory Power was negotiated in 1927 and signed towards the end of the year. The full text is not available but a semi official announcement on December 24th may be regarded as substantially authentic.

The Treaty declares that there shall be peace and friendship between His Britannic Majesty and His Majesty the King of Iraq. It states that Provided the present rate of progress in Iraq is maintained and all goes well in the interval, His Britannic Majesty will support the candidature of Iraq for admission to the League of Nations in 1932. It stipulates that separate agreements superseding those of March 25 1924, shall regulate the financial and military relations.

The King of Iraq undertakes to secure the execution of all international obligations which His Britannic Majesty has undertaken to see carried out in respect of Iraq. He also undertakes not to modify the existing provisions of Iraqi organic law so as adversely to affect the rights and interests of foreigners, and to constitute any difference in the rights before the law among Iraqis on the grounds of differences of race religion or language.

There shall be full and frank consultation between the high contracting parties in all matters of foreign policy which may affect their common interests. The King of Iraq undertakes, so soon as local conditions permit, to accede to all general international agreements already existing, or which may be concluded hereafter, with the approval of the League of Nations in respect of the slave trade, the traffic in drugs, arms and munitions, the traffic in women and children, transit, navigation, aviation, and communications, and also to execute the provisions of the Covenant of the League of Nations, the Treaty of Lausanne, the Anglo-French Boundary Convention, and the San Remo Oil Agreement in so far as they apply to Iraq.

There shall be no discrimination in matters concerning taxation commerce, or navigation against nationals or companies of any State which is a member of the League of Nations, or of any State to which the King of Iraq has agreed by Treaty that the same rights should be ensured as if it were a member of the League.

Any difference that may arise between the high contracting parties shall be referred to the Permanent Court of International Justice provided for by Article Fourteen of the Covenant of the League. The Treaty shall be subjected to revision with the object of making all the modifications required by the circumstances when Iraq enters the League of Nations.

It is important to remember that there is a considerable difference between the vilayet of Bagra and the other portions of King Faisal's State. Bagra has for long been in the closest commercial contact with India, and in many respects a commercial appendage of Bombay. Its people have not much in common with those of the North. They took no part in the Arab rising which followed the war, and they ask nothing better than to remain in close touch with India and through India with the British Government, if we are correct in the

Railway Position in the Middle East.

supposition that Basra is destined to be the great port of the Middle East, then its future under an Arab State, with no experience of administration in such conditions is one of the greatest interest which can hardly be regarded as settled by the policy underlying the declaration which is set out above.

The Persian Shore

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Lohann. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kists which preclude the idea of rail connection, and if ever a railway to the central tableland is opened the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debel on the Firsat Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the very of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman

and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore under the shadow of Cape Musandim, lies another sheltered deep-water anchorage, Bikhmstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. On the Makran coast there is the cable station of Jask, and the possible port of Chahbar.

II—SEISTAN

The concentration of public attention on the Persian Gulf was allowed to obscure the frontier importance of Seistan. Yet it was for many years a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar, and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattar. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations, it is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Ashkabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Whether with this purpose or not, Russian

intrigue was particularly active in Seistan in the early years of the century. Having Russianised Khorassan her agents moved into Seistan and through the agency of the Belgian Customs officials, scientific missions and an irritating plague cordon, sought to establish influence and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned.

The natural conditions which give to Seistan this strategic importance persist. Meantime British influence is being consolidated through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robot is 465 miles, most of it dead level, and it has now been provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spersand, on the Bolan Railway to Nushki, so as to provide a better starting point for the caravans than Quetta. This line was extended to the Persian Frontier, during the war as a military measure, but the traffic supports only two trains a week.

III—PERSIA.

From causes which only need to be very briefly set out, the Persian question as affecting Indian frontier policy has receded until it is of no account. Reference is made in the introduction to this section to the fact that the conclusion of the Anglo-Russian Agreement left us a bitter legacy in Persia. That Agreement divided Persia into two zones of influence, and the Persians bitterly resented this apparent division of their kingdom between the two Powers, though no such end was in view. German agents working cleverly on this feeling, established an influence which was not suspected, and when the war broke out they were able to raise the tribes in opposition to Great Britain in the South, and after the fall of Kut-al Amara when a Turkish Division penetrated Western Persia they exercised a strong influence in Teheran. With the defeat of Turkey and the Central Powers this influence disappeared but at that time there was no authority in Persia besides that of the British Government, which had strong forces in the North West and controlled the southern provinces through a force organised under British officers and called The South Persian Rifles. It was one of the first tasks of the British Government to regularise this position, and for this purpose an agreement was reached with the then Persian Government, the main features of which were—

To respect Persian integrity

To supply experts for Persian administration

To supply officers and equipment for a Persian force for the maintenance of order

To provide a loan for these purposes

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for £2,000,000 at 7 per cent. redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position.—We have given the main points in the Anglo-Persian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in the Indian Year Book for 1921, page 138 *et seq*. It has been explained that most Persians construed it into a guarantee of protection against all external enemies. When the British troops in the north-west retired before the Bolsheviks,

the Persians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew.

A remark frequently heard amongst soldiers and politicians in India after the War was that Great Britain must take an active hand in Persia because she could not be a passive witness to chaos in that country. The view always taken in the Indian Year Book was that the internal affairs of Persia were her own concern, if she preferred chaos to order that was her own look out, but left alone she would hammer out some form of Government. That position has been justified. The Sirdar Sipah or commander in chief, a rough but energetic soldier, gradually took charge of Persian affairs and established a thinly veiled military dictatorship which made the Government feared and respected throughout the country for the first time since the assassination of Shah Nasr-ed din. A body of capable Americans under Dr. Millspaugh restored order to the chaotic finances. These two forces operating in unison gave Persia the best government she had known for a generation. But the Sirdar Sipah chafed under the irregularities of his position, with a Shah spending his time in Europe and wasting the resources of the country. He moved to have his position regularised by the deposition of the absentee Shah and his own ascent of the throne. At first he was defeated by the opposition of the Mollahs, but in 1925 prevailed, when the Shah was formally deposed and the Sirdar Sipah chosen monarch in his place. The change was made without disturbance and Persia entered on a period of peace and consolidation which has removed it from the disturbing forces in the post-war world. Since then considerable progress has been made with the reform of the administration, and many projects are afoot for the improvement of communications, which is the greatest need of the land, such as an air service to Teheran and railway construction. The least reassuring episode was the departure of the American financial mission, which had done admirable work in the restoration of the finances. When their contract expired Dr. Millspaugh and his colleagues were offered a renewal of it on terms which they did not regard as satisfactory, especially in regard to the powers they were to exercise. They therefore withdrew from the country and have been replaced by other foreign advisers.

Sir Percy Lorraine assumed office as British Minister at Teheran in December 1921. He proceeded on leave that year and Sir R. Olive was appointed to officiate.

IV—THE PRESENT FRONTIER PROBLEM

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1893 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line there lies a belt of territory of varying width extending from the Gomal Pass in the south to Kashmir in the north, this is generically known as the Tribal Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin in whom Afghan, Tartar, Turkoman, Persian Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chitral truly said "the only bond that ever could unite them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade by service in the Indian Army or in the Khassadars, or else in the outset which till-men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains.

Frontier Policy

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics. In the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought no permanent improvement in its train. The fruit of this unpopularity thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Gomal, was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secre-

tary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exarise over the tribes the political influence requisite to secure our imperial interests to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab a province whose head is busied with many other concerns. Lord Curzon created in 1901, the North West Frontier Province, and placed it in charge of a Chief Commissioner with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next, Lord Curzon withdrew the regular troops so far as possible from the advanced posts, and placed these fortresses in charge of tribal levies, officered by a handful of British officers. The most successful of these was the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow gauge line, since converted to the broad-gauge, was constructed from Kamalgarh to Kohat at the entrance of the Kohat Pass, and to Thal in the midst of the Kurram Valley. These railways were completed by Lines to Tonk and Bannu. By this means the striking power of the regular forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade and the Lower Swat Canal converted fractious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (9 ft Irrigation). Now it is completed there are other works awaiting attention. For many years this policy was completely justified by results.

A New Policy

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory particularly in Waziristan, peopled by the most reckless raiders on the whole border-line with a bolt hole into Afghanistan when pressed from the British side. It endured through the Great War and did not break

down until the Amir of Afghanistan sought refuge from his internal troubles in a jihad against India. In this insane enterprise the Afghans placed less reliance in their regular troops, which have never offered more than a contemptible resistance to the British forces than in the armed tribesmen. In this they were justified, for the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan Militia broke and there was serious trouble throughout the Zhob district. The Afridis, our most serious enemies in 1897, and the most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later, it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahauds and the Waziris broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west, and by the districts of Bannu and Dera Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The fighting was the most severe in the history of the Frontier. The Mahauds fought with great tenacity. Their shooting was amazingly good, their tactics were admirable, for amongst their ranks were many men trained either in the Militia or in the Indian Army, and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own undoing, their losses were the heaviest in the long history of the Borderland and when the Mahauds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

A New Chapter.—As the result of the Afghan War of 1919, Indian frontier policy was again thrown into the melting pot. There was much vague discussion of the position in the course of the months which followed the Afghan War and the troubles in Waziristan which succeeded it, but this discussion did not really come to a head until February-March 1922. The Budget then presented to the country revealed a serious financial position. It showed that despite serious increases in taxation, the country had suffered a series of deficits which had been financed out of borrowings. Further heavy taxation was proposed in this Budget but even then the equilibrium which the financial authorities regarded as of paramount importance was not attained. When the accounts were examined, it was seen that the heaviest charges on the exchequer were those under Military Expenses and that there was an indefinitely large and seemingly unending expenditure on Waziristan. This forced the Military, and allied with it the Frontier expenditure to the front. In actual practice the discussion was really focussed on

Waziristan. In essentials it was the aged controversy—shall we deal with this part of the Frontier on what is known as the Sandeman system, namely, by occupying commanding posts within the country itself, dominating the tribesmen but interfering little in their own affairs or shall we revert to what was known as the close border system, as modified by Lord Curzon, of withdrawing our regular troops to strategic positions outside the tribal areas, leaving the tribesmen, organised into militia to keep the passes open and punishing the tribesmen by expeditions when their raiding propensities become unbearable.

The Curzon Policy.—The Curzon policy, adopted in 1899 to clear up the aftermath of the serious and unsatisfactory frontier rising in 1897 was a compromise between the "occupation and the "close border policies. It was based on the withdrawal of the regular troops so far as possible to cantonments in rear whilst the frontier posts, such as those in the Peshawar, Wana and in the P. Hyber and Kurram were held by militia, recruited from amongst the tribesmen themselves. The cantonments for regular troops were linked so far as possible with the Indian railway system, so as to permit of rapid reinforcement. But it must be remembered that like all Frontier students, Lord Curzon did not regard this as the final policy. He wrote in the Memorandum formulating his ideas "It is of course inevitable that in the passage of time the whole Waziri country up to the Durand line will come more and more under our control. No policy in the world can resist or greatly retard that consummation. My desire is to bring it about by gradual degrees and above all without the constant aid and presence of British troops." The Curzon policy, though it was not pursued with the steadfastness he would have followed if he had remained in control gave us moderate—or rather it should be said bearable—frontier conditions until the Afghan War. It then broke down, because the tribal militia, on which it was based, could not withstand the wave of fanaticism, and other conditions set up by the Afghan invasion of 1919. The Khyber militia faded away, the Waziri militia either mutinied, as at Wana, or deserted. The pillar of the Curzon system fell in the military phrase of the hour, it could not stand the test of religious fanaticism or an Afghan War. The very word Militia became anathema.

The Policy.—The policy first adumbrated to meet these changed conditions was outlined by Lord Chelmsford, the then Viceroy, in a speech which he addressed to the Indian Legislatures. He said it had been decided to retain commanding posts in Waziristan, to open up the country by roads, to extend the main Indian railway system from its then terminus, Jamrud, through the Khyber to the frontier of Afghanistan and to take over the duties of the Militia by regular troops. That immediate policy was soon modified so far as the garrisoning of these frontier positions by regular troops was concerned. Such duties are immensely unpopular in the regular army, which is not organised and equipped for work of this character. Irregulars have always existed on the frontier, and as they had disappeared with the Militia, it was necessary to recreate them

WAZIRISTAN

The new form of irregular was what have been called *Khasadars* and *Scouts*. The *Khasadar* is an extremely irregular. He has no British officers and no uniform, except a distinguishing kind of paper. In contradistinction to the old *Militia*, he finds his own rifle. As one informed observer remarked, the beauty of the system is that so long as the *Khasadars*, under their own headmen, secure the immunity of the caravans and perform their other police duties, they draw their pay and no questions

are asked. If they desert in the day of trouble, they lose their pay but the Government loses no rifles nor does it risk mutiny or the loss of British and Indian officers. But the application of this policy produced an acute controversy. It was one thing to say that commanding posts in Waziristan should be retained, it was another to decide what these posts should be. We must therefore consider the special problem of Waziristan.

V—WAZIRISTAN

We can now approach the real frontier question of the day, the future of Waziristan. What follows is drawn from an admirable article contributed to the January number of "The Journal of the United Service Institution of India," written by Lt Col G M Routh, D.S.O.

Geographically Waziristan is a rough parallelogram averaging 60 miles from East to West and 180 from North to South. The western half consists of the Sulaiman Range gradually rising up to the ridge from five to ten thousand feet high, which forms the water shed between the Indus and the Helmand Rivers and corresponds with the Durand Line separating India from Afghanistan. This is the western boundary. On the east is the Indus. North is the water shed of the Kurram River running East and West about 80 miles north of Bannu separating Waziristan from the Kohat District. South is a zigzag political boundary from the Durand Line running between Wana and Fort Sande man in Beluchistan with a turn southwards to the Indus.

The western half is a rugged and inhospitable medley of ridges and ravines straggled and confused in hopeless disarray. The more inhabited portions lie well up the slope at heights of four to six thousand feet. Here are our outposts of Wana and Ladha some 15 and 20 miles respectively from the Durand Line, in the centre of the grazing district, the latter within five miles of important villages of Kaurigum and Makin.

The submontane tracts from the hills to the Indus vary from the highly cultivated and irrigated land round Bannu to the sandy desert in the Marwat above Peru.

Where irrigation or river water is obtainable cultivation is attempted under conditions which can hardly be encouraging. Other tracts like that between Peru and Tank, usually pastoral, can only hope for an occasional crop after a lucky rainfall.

Inhabitants.—The inhabitants, unable to support existence on their meagre soil, make up the margin by armed robbery of their richer and more peaceful neighbours. The name originates according to tradition from one Wazir, two of whose grandsons were the actual founders of the race. Of the four main tribes Darweshkhal, Mahsuds, Dawars and Batanni, only the first two are true Wazirs. Their villages are separate though dotted about more or less indiscriminately, and inter-marriage is the exception—in fact all traditionally are in open strife, a circumstance which, until some bright political comet like the Afghan War of 1919 joined them together, as materially added our dealings with them.

Unlike other parts of India, however, these wild people acknowledge little allegiance to maliks or headmen. No one except perhaps the Mulla Powindah till his death in 1918 could speak of any portion of them as his following.

Policy.—The policy of the British was at first one of non interference with the tribes. Even now only part of the country is administered. Gradually it was found that more and more supervision became necessary to control raiding and this was attempted by expeditions to portions of the country with Regulars followed by building posts and brick towers to be held by *Militia*. These posts were at first placed at the points where raiders usually debouched. The Political Officers, at first supported by Regulars, built up from 1904 onwards a force of some 3,000 *Militia* with British Officers at their disposal, who were backed up by the garrisons at Bannu and Dera Ismail Khan. In addition certain allowances were made to the tribes for good behaviour, cessation of raids and surrender of offenders when required, also for tribal escorts as necessary. Gradually, as occasion required, posts were occupied. Wana was occupied in 1895 at the request of the Wana Wazirs. Similarly the Tochi in 1896. In the comprehensive expedition of 1895-96 when this policy was put into effect, the British arms were shown in every remote valley in the vain hope of taming the Mahsuds. It was hoped the various posts would prove a pacifying influence and a rallying ground for Government supporters. From 1904 to 1919 they were held by *Militia*. Roads and communications were improved and tribal allowances augmented by sales of produce to the troops on a liberal scale.

A Programme.—Lt Col Routh then outlined a possible policy for Waziristan. We give it textually, because we believe that when it was written it reflected how military opinion in India was developing.

To the unprejudiced mind it appears more practical to grasp the settle firmly and dominate the inhabited tracts. Why should not the road now being made to Ladha be continued 84 miles north to the Tochi road at Datta Khel and 29 miles south to Wana? Why should we not occupy the healthier portions of Waziristan rather than the foothills or Cis-Indus zones? The Razmak district round Makin 5,000 feet up is both healthy and fertile. The same applies to the Shawal valley lying behind Pir Gul, the national peak near Ladha rising to a height of 11,556 feet above the sea. The Wana plain, 5,000 feet up 80 miles by 15, could with railways support an army corps, there is no doubt that a forward railway policy will help to solve the problem. A line has been surveyed from

Tank to Draban and thence up the valley to Fort Sandeman, so connecting with the Zhob and perhaps later to Wana. The Gumal Tangi from Murassa to Khajuri Kach is the apparently obvious route but would be prohibitively expensive in construction and require much tunnelling. Beyond Khajuri Kach *via* Tanai and Bogha Kot to Wana, some 23 miles offers no difficulty. The old policy of the raiders working westwards and our retributive expeditions stretching their very temporary tentacles eastwards seems to suggest better lateral communications. The broad gauge at Kohat might without undue cost be extended to Thal and thence to Idak *via* Spinwam. From here till further extension proved desirable a motor road through Razmak, Makin and Dwatol to link up with that now surveyed to Ladha sounds possible to the looker on. Eventually such communications, road rail, or both, could continue to Wana, Fort Sandeman and Quetta *via* Hindu Ragh a strategic line offering great defensive possibilities substituting Razmak, which resembles Ootacamund, and healthy uplands for the deadly fever spots now occupied. The very fact of employing the tribesmen on these works with good pay and good engineers tends to pacify the country as well as providing healthy accessible hill stations in place of the proverbially comfortable cantonments which now exist in this part of the Frontier.

A Compromise.—A full statement of the policy finally adopted by Government in view of the situation left upon their hands after the Mahsud rebellion was made by the Foreign Secretary, Sir (then Mr.) Denys Bray, in the course of a Budget discussion in the Legislative Assembly on 6th March 1923. He outlined neither a Forward policy nor a Close Border policy. Both these terms had, in fact, ceased to be appropriate. Circumstances had so changed that neither the one plan nor the other remained within the bounds of reasonable argument.

The Foreign Secretary explained that the ingredients of the Frontier problem at the present day are essentially three, namely: the Frontier districts, the neighbouring friendly State of Afghanistan, and the so-called Independent Territory, this last being the belt of unsettled mountain country which lies between the borders of British India and India. He proceeded specially to show that this belt is, in fact, within India. It is boundary pillars that mark off Waziristan from Afghanistan, it is boundary pillars that include Waziristan in India. We are apt to call Waziristan independent territory, and it is only from the point of view of our British districts that these tribes are trans-frontier tribes. From the point of view of India, from the international point of view that is, they are *de-facto* tribes of India. If Waziristan and her tribes are India's scourge they are also India's responsibility—and India's alone. That is an international fact that we must never forget.

Sir Denys next referred to the triumph of the Sandeman policy in Baluchistan. He pointed out that some people long ago believed that the same policy would prove effective in Waziristan. But what was a practical proposition 20 or 30 years ago is not necessarily so now. The task is infinitely more difficult

to-day chiefly because the tribesmen are infinitely better armed, their arms having increased at least tenfold during the last 20 years. Dealing with the Close Border prescription he showed that if one erected a Chinese wall of barbed wire fence along the plain some distance below the hills all the time the problem in front of us would be going from bad to worse, with the inevitable increase of arms in the trans border and with that inevitable increase in the economic stringency in this mountainous tract which would make the tribesmen more and more desperate more and more thrown back on barbarism. A rigid Close Border policy is really a policy of negation, and nothing more. We might gain for our districts a momentary respite from raids but we would be leaving behind a legacy of infinitely worse trouble for their descendants.

The settled policy of Government in Waziristan Sir Denys showed, was the control of that country through a road system of which about 140 miles would lie in Waziristan itself and one hundred miles along the border of Dirajat and the maintenance of some 4,000 Khassadars and of some 6,000 irregulars while at Razmak 7,000 feet high and overlooking northern Waziristan there would be an advanced base occupied by a strong garrison of regular troops. Razmak he showed to be further from the Durand line than the old-established posts in the Tochi. In the geographical sense, therefore the policy was in one signal respect, a backward policy. None the less, it was a forward policy in a very real sense for it was a policy of constructive progress and was a big step forward on the long and laborious road towards the pacification through civilization, of the most backward and inaccessible, and therefore the most treacherous and aggressive tribes on the border. Come what may, civilization must be made to penetrate these inaccessible mountains or we must admit that there is no solution to the Waziristan problem, and we must fold our hands while it grows inevitably worse.

The policy thus initiated has proceeded with results according with the highest reasonable expectations and exceeding the most sanguine hopes of most people concerned in its formulation.

The roads are policed by the Khassadars, who have, in the main, proved faithful to their trust. The open hostility of the Waziri tribesmen to the presence of troops and other agents of Government in their midst, which at the outset they showed by shooting up individuals and small bodies of troops on every opportunity, has faded away, and the people have shown an understanding of the rule of law and under the control exercised, a readiness to conform to it. In various small but significant ways methods of civilization have caught the imagination of the people and won their approval. Thus, the safety of the roads has encouraged, and is buttressed by, a considerable development of motor bus traffic. The roads, as the King's Highway are officially held to be sacrosanct, that is, no shooting up or other pursuit of personal or tribal feuds is permitted upon them. This permits villagers to proceed to and from the plains towns in safety. Under the influence of their women, the tribesmen have

applied that the ban against shooting upon the highway shall be extended to all the country, for three miles on either side of the highway. Tentative efforts to introduce primary education have been possible and have achieved as much success as could be expected. The hospitals and dispensaries maintained for irregular troops called Scouts employed about the country, attend to the wants of the tribespeople who come to them. So much has this arrangement been appreciated that the Mahsuds formally, applied for the establishment of a hospital of their own. With great humour they offered to provide such an institution with the necessary surgical instrument, saying that they had saved this from the time when the British formerly left the country. In other words they offered what they had captured or looted during the 1919 emeut.

A remarkable illustration of the acceptance by the people of the new conditions was provided a year or two ago by the Wana Wazirs when they partitioned the Political Authorities for the occupation of south Waziristan corresponding with that already established in northern Waziristan. A motor road had already been run out from Hundole through Hagunall and the Shuhai Lang to Sarakhal. A brigade of troops, hitherto stationed at Mawal, wheeled about the Lak Zam area following down the deep valley from northern Waziristan debouches on to the Betajaf was accordingly ordered up to Wana in the autumn of 1929. It proceeded throughout the journey without opposition and was warmly welcomed by the tribes people at Wana where it established itself in a favourably sited camp not far from the fort which was the earlier centre of British occupation.

The reoccupation of Wana and the circum-stances in which it took place illustrate that a policy is a live thing. In other words it is not a programme which can reach fulfilment or completion. It lives and always waits upon some new action to give it further expression. In this respect the new policy though it has only demonstrably been applied in Waziristan, must be regarded as that which governs the actions of the authorities in regard at least to the whole Frontier region lying between Baluchistan and the Khyber Pass, except, possibly, the Kurram Valley.

A startling new development upon the North West Frontier during 1930 was the spread thereto of agitation carried on by the Indian National Congress the interior of India in pursuit of its efforts to bring political pressure to bear upon the Government of India and above them His Majesty's Government. The Congress at its annual session at Lahore in the week following Christmas 1929, adopted a programme aiming at the separation of India from the British Empire and at the promotion of revolution in India to secure this end. In particular it avowedly set out to make Government impossible. Revolutionary agitation and especially a campaign to promote disobedience of the civil law in order to bring the administration to a standstill, commenced all over India immediately after the Congress meetings. The settled districts of the N.W.F.F., were the scene of this, in common with

the rest of the land. The agitation was there carried on by Congress agents organised in what are known as Khilafat Committees. For their purpose they made special use of Congress misrepresentations of the Sarda Act recently passed by the Indian Legislature by the official and Hindu votes against the opposition of the Muslim non official members. This measure makes illegal and provides penalties for the marriage of boys and girls below stated minimum ages. The age at which marriage may take place is also in general terms laid down for Mohammedans by their religious law. Hence the Muslims in British India while acknowledging that the Sarda Act would not in practice affect them because its provisions in no way over ruled their religious law never the less saw in the measure an act affecting the domain of their religious law and passed, in spite of their dissent in a Legislature in which Muslims are, by their own a hopeless minority. They regarded its enactment as a grave illustration of their fears that under any scheme of democratic self government in India Muslim interests would not be safe against disregard by the Hindu majority.

Outbreak at Peshawar in 1930—This Muslim apprehension has since the passing of the Act strongly influenced the attitude of the community towards all questions of political reform and the lever which misrepresentation of the Act provided for stirring up anti Government agitation is the almost wholly and fanatical Muslim province in the north can easily be understood. Grossly untrue propaganda was carried on. It was for instance alleged that under the Act all girls must be medically examined before marriage. An elaboration of this untruth was that the Government were recruiting a large body of Hindu inspectors to make the examinations. And the agitation was deliberately pushed outwards from the settled districts of the N.W.F. into the tribal areas. Waziristan was amongst the first of them to be inundated with the propaganda. This was in March-April 1930. The poison spread outwards from Peshawar into Tirah about the same time. The agitation was sedulously carried on in the district northward of Peshawar city and from thence was pushed into Mohmand country. The first point of violent combustion was Peshawar city where the mob murderously broke out on 23rd April 1930. Within a short time Afridi bands descended the ravines and nullahs from Tirah to join in the fray. The Mohmands became greatly excited and sent down bands to sit near the border and watch for an opportunity to join in. The Upper Fokhs Wazir simultaneously took to arms and shortly afterwards the Mahsuds Wazirs, about Ladha did the same. At this stage, the development of the Air arm in India proved of incalculable value. Aeroplanes patrolled the whole country and were frequently employed by the political authorities to take preventive and punitive action by bombing. The road system meanwhile, as shot troops to be moved at will to positions of advantage for dealing with whatever serious tribal aggression appeared likely.

In the result, the Mohmands after being bombed several times, found discretion the better part of valour and made no descent in force. The Afridis twice endeavoured to raid

Peshawar in force but by combined air and land action were both times driven back to their hills with no achievement to report. The Orakzais of southern Tirah threatened to descend by the Ublan Pass upon Kohat and their western clans attacked a post in the Upper Kurram and endeavoured to attack Parachinar. Helped by the machinations of Congress agents they succeeded in drawing two or three clans of Afghan tribesmen across the border into the fray. Combined air and ground action crushed these efforts. The Tochi Wazirs heavily attacked Datta Khel. The Mahsuds were similarly repulsed and punished when they assaulted Surarogha, in the valley of the Taklamakan.

All outbreaks of revolt were suppressed in the same manner and the establishment of new fortified posts on the Peshawar plain immediately opposite the main valleys leading out of Tirah, and the construction of roads for their service, now indicate the application of the new frontier policy in that region.

It will be seen that the events of the summer of 1930 put the Policy to a severe test and that its successful operation in the emergency was specially assisted by the Royal Air Force. The resultant position appears, then, to be that the control of the tribes, where the policy has already been expressed in road building and in the establishment of suitable garrisons is effective, that the political and military ground organisation with which the Policy is supported brings about the introduction of the ameliorative influence of civilisation and that the rapidity and success with which the Royal Air Force can operate over the hills, tends to diminish the amount of ground force necessary. On the other hand the two descents of the Afridis upon the plain and their return to their homes without great loss despite all that the Royal Air Force and large bodies of troops could do, indicate the capacity for mischief which lies in the hands of the Tirah tribes, and must remain there so long as the Policy is not extended over their highlands.

VI—AFGHANISTAN

The relations of Afghanistan with the Indian Empire were for long dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholic episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the transit frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Sektan. It was the purpose of British policy to close them and of Russia to endeavour to keep them at any rate half open. To this end, having

pushed her trans-Persian railway to Samarkand, Russia thrust a military line from Merv to the Kushkimaq Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the trans-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chaghar Rift, lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Khejnk tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or by the direct route through Sektan.

Further east, the Indian railway system was carried to Jamrud and by the autumn of 1925 up the Khyber Pass to Landi Kotal and down the other side of the Pass to Landi Khana. A first class military road sometimes double, sometimes treble, also threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Landi Khana. Later, a commencement was made with the Lol Shikhar Railway, which, starting from Peshawar, was designed to penetrate the Mullagori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons, this line was suddenly stopped and is now thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly in the first particular it has early and largely succeeded. The second aim may now also be said to have been attained. When the late Abdurrahman was invited to ascend the throne, as the only means of escape from the tangle of 1879 none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year increased to eighteen by the Durand Agreement of 1893, and subsequently to over 30 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission—which nearly precipitated war over the Panjdeh episode in 1885—determined the northern boundaries. The Pamir Agreement delimited the borders amid those anomy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber, which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the Mullahs award closed the old feud with Persia over the distribution of the waters of the Helmand in Sistan. It was estimated by competent authorities that about the time of Abdurrahman's death, Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahman Khan distrusted British policy up to the day of his

death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St James.

Afghanistan and the War.—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the wise sayings of the Frontier that the system which Abdurrahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but that they must trust him, certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconception. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a jihad or holy Islamic war. But he committed no act of hostility as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified. He had kept Afghanistan out of the war, he had adhered to the winning side, his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir.—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 26th February 1919. The circumstances surrounding his murder have never been fully explained, but there is strong ground for the belief that it was prompted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come; they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nusratullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jalalabad in his stead, but public opinion in Afghanistan

revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and with drew. The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced. He had to deal with the war party in Afghanistan, he was confronted with the dissimulation arising from the manner in which the murderers of Habibullah had been dealt with, the fanatical element was exasperated by the imprisonment of Nasrullah, and the Army was so incensed that it had to be removed from Kabul and given occupation to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlett Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India, of whom the most prominent was Ghulam Hyder Khan, the Afghan postmaster at Peshawar, fanned Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes on whom the Afghans placed their chief reliance.

Speedy Defeat.—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with. Strong British forces moved up the Khyber and seized Dacca, Jelalabad was repeatedly bombed from the air and also Kabul. Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which is set out in the Indian Year Book, 1923, pp 196-197.

Post War Relations.—It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards. During the hot weather of 1923 there were prolonged discussions at Mussoorie between Afghan Representatives and British officials under Sir Henry Dobbs. These were private, but it is believed that a complete agreement was reached. Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul where a peace treaty was signed.

The main points of the Treaty are set out in the Indian Year Book, 1923, pp 197, 198-199.

Afghanistan after the War.—Since the war the relations between Afghanistan and Great Britain have been good and improving. There were painful episodes in 1922 when a murder gang from the tribal territory on the British side of the Frontier committed raids in British India, murdering English people and kidnapping English women and then took refuge in Afghanistan. In course of time this gang was broken up. His Majesty the King of Afghanistan had troubles within his own borders which have made him glad of British help. The main object of his government was to strengthen the resources of the country and to bring it into closer relation with modern methods of administration. But Afghanistan is an intensely conservative country and no changes are popular, especially violent was the opposition to a secular form of administration and education. The direct result was a formidable rebellion of Mangals and Zadrans in the Southern Provinces, and serious reverses to the regular troops sent against the rebels. At one time the position was serious, but the rebels were not sufficiently united to develop their successes, and with the aid of aeroplanes and other assistance afforded by the Government of India the insurrection was broken. Whilst this assistance was appreciated the whole business gave a serious set back to the reforms initiated by His Majesty, he had to withdraw almost the whole of his administrative code and to revert to the Mahomedan Law which was previously in force.

Bolshevik Penetration.—Taking a long view a much more serious development of the politics of Afghanistan at the period to which the foregoing notes apply was the penetration of the Bolsheviks. These astute propagandists have converted the former Trans Caspian states of Turkestan Russia into Soviet Republics, where the rule of the Bolsheviks is much more drastic and disruptive than was that of what was called the despotism of the Romanoffs. The object of this policy is gradually to sweep into the Soviet system the outlying provinces of Persia of China and of Afghanistan. In Persia this policy has been foiled by the vigour of the Sipah Salah Reza Khan since declared Shah. In Chinese Turkestan it is pursued with qualified success. In Afghanistan it also made certain progress. The first step of the Bolsheviks was to extend the Soviet Republics of Tajikistan, Uzbekia and Turkmenistan so as to absorb all Northern Afghanistan. This was later apparently abandoned for the moment for a more gentle penetration. Large subsidies, mostly delivered in kind were given to Afghanistan. Telegraph lines were erected all over the country, roads were constructed, large quantities of arms and ammunition were supplied, whilst an air force with Russian pilots and mechanics was created and was largely developed. In return the Bolsheviks received important trading facilities. The whole purpose of this policy was ultimately to make it possible to attack Great Britain in India through an absorbed Afghanistan.

It is very doubtful if the Amir and his advisers were deceived by these practices, and whether they did not pursue the simple plan of taking

all they could get without the slightest intention of handing themselves over to the Bolsheviks. But it is easier to let the Bolshevik in than to get him out. Friends of the Afghans were asking themselves whether the Amir was not nourishing vipers in his bosom. Towards the end of 1925 and in the early part of 1926 there was a rude awakening. The Northern Frontier of the country has always been unsettled because of the shifting courses of the Oxus. In December Bolshevik forces captured with violence the Afghan post of Darkabad, killing one soldier. These events aroused great indignation at Kabul and were denounced by the Amir *coram publico*. There is no little evidence to show that though the form of government has changed in Russia the aims of Russian policy are the same. It used to be said that the best of Russian good faith under the Anglo-Russian Agreement would be the attitude of Petrograd towards the extension of the Orenburg Tashkent railway to Termez. That line has been constructed by the Bolsheviks. The Afghans have had their eyes opened.

Russo Afghan Treaty—Outwardly the relations between the two States are friendly. In December 1926 the Afghan papers published the text of a new treaty concluded with Soviet Russia, which was signed on August 31st, but it provided that it should in no way interfere with the secret treaty signed in Moscow on February 28th, 1921. The principal clauses of this treaty as disclosed in the Afghan papers are as follows—

Clause 1—In the event of war or hostile action between one of the contracting parties and a third power or powers, the other contracting party will observe neutrality in respect of the first contracting party.

Clause 2—Both the contracting parties agree to abstain from mutual aggression, the one against the other. Within their own dominions also they will do nothing which may cause political or military harm to the other party. The contracting parties particularly agree not to make alliances or political and military agreements with any one or more other powers against each other. Each will also abstain from joining any boycott or financial or economic blockade organized against the other party. Besides this in case the attitude of a third power or powers is hostile towards one of the contracting parties the other contracting party will not help such hostile policy, and, further, will prohibit the execution of such policy and hostile actions and measures within its dominions.

Clause 3—The high contracting parties acknowledge one another's Government as rightful and independent. They agree to abstain from all sorts of armed or unarmed interference in one another's internal affairs. They will decidedly neither join nor help any one or more other powers which interfere in or against one of the contracting Government. None of the contracting parties will permit in its dominions the formation or existence of societies and the activities of individuals whose object is to gather armed force with a view to injuring the other's independence, or otherwise such activities will be checked. Similarly, neither of the con-

tracting parties will allow armed forces, arms ammunition, or other war material meant to be used against the other contracting party to pass through its dominions.

Clause 6—This treaty will take effect from the date of its ratification which should take place within three months of its signature. It will be valid for three years. After this period it will remain in force for another year provided neither of the parties has given notice six months before the date of its expiry that it would cease after that time.

On March 23rd there was also signed in Berlin a treaty between Germany and Afghanistan which amounted to no more than the establishment of diplomatic relations.

A British Minister is established in Kabul as well as the representatives of other European States. The representatives of Afghanistan are established in India and in London, and at some of the European capitals. The various subsidiary agreements under the Treaty have been carried into effect.

The King's Tour—In the closing months of 1927 His Majesty King Amanullah, accompanied by the Queen and a staff of officials, commenced a long tour to India and Europe. It is understood that this was one of the cherished ambitions of his father, King Habibullah, who was assassinated in 1919. King Amanullah, when he set out, was warmly welcomed in India and received a great popular greeting in Bombay both from his co-religionists and from members of other communities who forgot the invasion of India, in 1919. He then took ship to Europe. He was the guest of His Majesty King George V in London, and visited the principal European capitals. He made a State visit to Turkey and returned to Afghanistan by way of Soviet Russia and Persia. A series of treaties with the governments of the countries visited was announced and the King returned to Kabul in the late summer of 1928, the tour having been unclouded by untoward incident. Afghanistan was peaceful during his long absence.

Reforming Zeal—King Amanullah returned to his realm full of reforming zeal. He was much impressed by the political and social institutions of the western lands he visited and in particular by the dramatic forcefulness with which Mustafa Kemal Pasha had driven Turkey along the path of reform, or perhaps it would be more correct to say westernization. In this he was encouraged by the Queen, who was desirous of seeing the women of Afghanistan enjoy some of the freedom and opportunity won by and for the women of the West. Edict after edict was issued changing the whole structure of Afghan society. New codes and taxes were imposed. It was proposed that women should emerge from their seclusion and doff the veil, the co-education of boys and girls was prescribed, in September Government officials were forbidden to practise polygamy, in October European dress was ordered for the people of Kabul. At the same time, the pay of the regular troops fell into arrear.

With every appreciation of the spirit and direction of these changes friends of His Majesty advised the King to moderate the pace. They reminded him that in 1924 far less drastic changes had brought serious trouble in their train. In May of that year the Lame Mullah raised the standard of rebellion amongst the Gilzai and Mangal clansmen of Khost. The Mullahs were openly active against the King and His Majesty was equally frank in his hostility to them. Possibly also well-wishers suggested that what was possible in Turkey after centuries of close contact with the West, and where the ground had been prepared by missionary effort and a long struggle for the emancipation of women, might be less easy in Afghanistan where there had been no contact with the western world.

A change of Kings—Events moved rapidly in 1929. A notorious north Afghan badmash, Bacha-i-Saqao, raised the standard of revolt and inflicted severe losses on the Afghan Regular troops discontented as they were by arrears of pay. Day by day the Afghan representatives in various parts of the world issued messages asserting that the rebels had been destroyed, and a rapid series of pronouncements declared the withdrawal of all the reforms and the establishment of a Council of Provincial Representatives. Communications with the outer world were broken. King Amanullah and his family fled from Kabul to Kandahar, and then from Kandahar via Quetta to Bombay where they took ship to Europe. King Amanullah on his arrival at Rome entered into possession of the Afghan Legation where he remained. Bacha-i-Saqao declared himself King of Afghanistan, and for a few months held his position in Kabul. Without money, administrative experience or a disciplined following his throne was a thorny one and he

was harassed by constant attacks. The Royal Air Force in India meanwhile went to the rescue of the British Nationals beleaguered in and around Kabul and in a series of brilliant flights evacuated all without the slightest hitch. The most formidable of the new king's adversaries were led by General Nadir Khan, a scion of the old ruling house with a wide knowledge of the old ruling house with a wide knowledge of the old ruling house. Heavy fighting took place. Fortunes varied. Nadir Khan almost gave up his chance as finally lost. But a band of Wazirs from the British side of the border, attracted by prospects of loot, joined Nadir and finally seized Kabul in his name and interest. Nadir Khan thus became Victor and shortly afterwards, at the wish of the Afghans, Bacha-i-Saqao was executed with other rebels and when the year closed Nadir Khan was to all seeming in firm possession of the Kingdom. He despatched members of his family to the principal Afghan Legations in Europe. A Shikharai rising near the exit from the Khyber Pass took place in February 1930 and was repressed with unexpected success and vigour. There followed a serious rebellion in Kohistan, Bacha-i-Saqao's country. This also was promptly quelled. And thereafter Nadir Khan has ruled without challenge. He is now devoting himself to the reorganisation of his Army. He has given evidence of his friendliness towards Britain and India. He co-operated effectively to prevent tribes on his side of the frontier joining those on the British side against the Government of India in response to the Congress agitation in the summer of 1930. The trade routes have been re-opened and the new king has again taken up Amanullah's power of reform but in a statesmanlike manner which carries the Mullahs along with him.

British Representatives—R. R. Macnachie, C. I. E.

VII—TIBET

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse—the spiritual equal if not superior of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hastings' departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Maconachie of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over

Tibet was recognised, and to whose views until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontier. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjief, who had established a remarkable ascendancy in the councils of the Dalai Lama. After a few years residence at Lhasa Dorjief went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission of which the head was officially described in Russia as "the senior Tantric Khomba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjief returned to Lhasa to report progress, and in 1901 was at St. Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjief had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904

In view of these conditions the Government of India, treating the Li-a of Chinese suzerainty over Tibet as a constitutional fiction proposed in 1903 to despatch a mission, with as armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility and there was fighting at Tuna and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890, to open trade marts at Gyantse, Gartok and Yatung to pay an indemnity of £500,000 (seventy-five lakhs of rupees), the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government Intervention.

For reasons which were not apparent at the time, but which have since been made clear,

the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893 remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

Chinese Action

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that he would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a constitutional fiction, it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Kih-feng, Acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet. He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meanwhile the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908, was received by the Court and despatched to resume his duties at Lhasa. Moving by leisurely stages he arrived there at Christmas, 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He

was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India made strong protests to China against this action. They pointed out that Great Britain while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913 in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic, saying that Tibet came within the sphere of Chinese internal administration, and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Govern-

ment of India, Mr Ivan Chen representative of China, and Mr Long Chen Shatra, Prime Minister to the Dalai Lama, threatened out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initiated in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1913 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Peking was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marches, hostilities were suspended and an armistice was concluded.

From what has gone before it will be seen that the importance which formerly attached to the political condition of Tibet was much less a local than an external question and was influenced by our relations with Russia and China rather than with our relations with Tibet. Russia having relapsed into a state of considerable confusion and China having relapsed into a state of absolute confusion these external forces have disappeared, and Tibet no longer looms on the Indian political horizon. The veil has been drawn afresh over Lhasa, and affairs in that country pursue an isolated course, with this considerable difference. The Dalai Lama is now on terms of the greatest cordiality with the Government of India. In 1920 he requested that a British officer should be sent to discuss with him the position in Central Asia brought about by the Revolution in Russia and the collapse of Government in China, and Mr Bell, C.M.G., I.C.S. Political Officer in Yikim, was deputed for this purpose. In 1922 telephonic communication between Lhasa and India was established.

*British Trade Agent, Gyantse and Yaktung—
Captain D. R. Smith*

VIII —THE NORTH-EASTERN FRONTIER

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Kopal, Sikkim and Bhutan. From Chitral to Gilgit, now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is Kashmir. The characteristics of this State are considered under Indian States

(*q.v.*), it is almost the only important Native State in India with frontier responsibilities and it worthily discharges them through the agency of its efficient Indian State troops—four regiments of infantry and two Mountain Batteries composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then we come to the long narrow strip of Nepal. This Gurkha State stands in special relation with the British Government. It is for all practical purposes independent, and the British Resident at Kathmandu exercises no influence on the internal administration. The governing

machine in Nepal is also peculiar. The Mahara (Dhira), who comes from the Secodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister Mr Chandra Shamsher has visited England and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia. Under the firm rule of the present Prime Minister Nepal has been largely free from internal disturbance and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of Bhutan and Sikkim, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China was officially notified that Great Britain would protect the rights and interests of these States. At the request of the Nepalese Government a British railway expert was deputed to visit the country and advise on the best means of improving communications with India. As the result of his report the Nepalese Government have decided to construct a light railway from Bishakhori to Razaul. Great success has attended the efforts of the Nepalese Government to abolish slavery.

Assam and Burma

When we come to the Assam border tribes—the Daffas, the Miris, the Abors and the Malsmis. Excepting the Abors none of these tribes have recently given trouble. The murder of Mr Wilkinson and Dr Gregerson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N. E. frontier. A force of 2,500 and about 400

military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murder was delivered up. The cost of the expedition was Rs. 21,00,000. At the same time friendly missions were sent to the Mishmis and Miris countries. Close contact with these forest-dwelling and leech infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagas runs northwards from Manipur. The Nagas are a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myittha and Bhamo districts of Burma. Over the greater part of this area a labyrinth of hills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilization is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States, with an area of fifty thousand square miles and a population of 1,500,000. These States are still administered by the Sawbwas or hereditary chiefs, subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Rail way to Lashio, opened in 1903, was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karen States lie on the frontier south of the Shan States. South of Karen the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent. A notable humanitarian development of recent years is the success of the measures to abolish slavery in the Hukawng Valley. In this remote place in the north east of Burma a wild system of slavery existed, but in response to the initiative and pressure of British officers they were all freed by April 1923.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in invading Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibis and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samarra.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra to Haerath, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-el-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches

off in the neighbourhood of Kirkuk in the direction of Mosul. A line also runs westward from Baghdad to Fajr, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julla, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urmia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman. The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North West Frontier does not suggest the early removal of the strategic difficulties. The completion of a broad gauge line extending the Indian railway system through the Khyber Pass to Landi Khana at its western extremity, opens a prospect of further possible rail connections with Afghanistan.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammedan, at the opening of the Karun Valley where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

Foreign Consular Officers in India.

The Army.

The great sepoy army of India originated in the small establishments of guards known as *peons*, enrolled for the protection of the factories of the East India Company but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1686 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1680, but in 1684 the garrison of Fort St. George consisted of only ten men. In 1691 Bombay was occupied by 400 soldiers, and in 1698 the number was only 285 of whom 88 were English and the rest French, Portuguese and Indians.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Duplex were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander in Chief. In Madras the European companies were developed into the Madras Fusiliers, similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Olive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Duplex had by 1760 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Olive and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owing nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the Indian armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and

the Indians numbered some 67,000, the infantry being generally formed into 75 regiments of two battalions each. In Bengal, regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798, the Marquis Wellesley arrived as Governor-General firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French and then turned his attention to the Mahratta States in which Sindia had established power over the Mughal Emperor at Delhi by means of a large regular army offered by Europeans under the French adventurist Poron. In campaigns against Sindia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Amaya. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the Fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 10th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas Expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century. *Bourbon was taken from the French*. *Ceylon and the Spice Islands were wrested from the Dutch* and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814, the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817, hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The

Mahratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten respectively at Kirkee, Sitabdi, and Malhapor. This was the last war in Southern India. The tide of war rolled to the north never to return. In the Punjab to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824 the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of Indian infantry, 5 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars.—In 1839, a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measure retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former awe. Sikh aggression led to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Muddki and Ferozeshahr the opening battles but did not surrender until they had been overthrown at the battles of Aliwal and Sobroon. Two years later, an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chillianwala, our brave soldiers were finally overcome at Gujrat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended over the frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established and was constantly engaged in small expeditions which while they involved little bloodshed, kept the force employed and involved much arduous work.

The Indian Mutiny.—On the eve of the mutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 Indian troops in the Madras Army 8,000 British and 49,000 Indian troops, and in the Bombay Army 9,000 British and 45,000 Indian troops. The proportion of Indian to British was therefore too large for safety. The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances, and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge

in which the powder was enclosed in a paper cover, which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports that flour was mixed with bone dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Barrackpore and in an outbreak at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose and, aided by the mob, burned the houses of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by few Indian battalions, who join of the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September. In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1859 ended in the defeat of the Rani of Jhansi.

Minor Campaigns.—During the period until 1870, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Amoy Campaign, and the Abyssinian War. Then followed the Afghan War in which the leading figure was Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to and ensued upon the annexation of Burma several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reorganisation after the Mutiny.—In 1857 the East India Company ceased to exist

and their army was taken over by the Crown. At this time the army was organized into three armies, viz. Bengal, Bombay and Madras, the total strength being 65,000 British and 140,000 Indian troops.

Several minor re-organizations took place during the following years such as the linking of three Regiments together and the raising of (class) Regiments and Companies. In 1885 the next large reorganization took place. This was the abolition of the three Armies and the introduction of the command system. Four Commands were formed, viz. Punjab, Bengal, Madras and Bombay.

Lord Kitchener's Scheme.—This system lasted until 1904 when under Lord Kitchener's re-organization the Madras Command was abolished and the Army divided into three Commands—the Northern, Eastern and Western corresponding to the Punjab, Bombay and Bengal Commands.

In 1907, Lord Kitchener considered that consequent on the delegation of administrative powers to Divisional Commanders, retention of such powers by Lieutenant Generals of Commands led to delay in the despatch of business. The Command system was therefore abolished and India was divided into two Armies—the Northern and Southern—each under a General Officer who was responsible for the command, inspection and training of the troops but was given no administrative responsibilities.

Early in the War both Army Commanders took the field and were not replaced until 1918 and 1917 when both had practically the same functions as their predecessors. It was now realised that administration was being unduly centralised at Army Headquarters and the machinery was becoming clogged with unnecessary details. To secure efficiency at A. H. Q., therefore a certain measure of decentralisation was carried out in 1918. With the alteration of the designation Army to "Command" at this time, a considerable increase was made in the administrative staffs of the two Commands and the General Officers Commanding were given powers to deal with all administrative questions other than those dealing with matters of policy new principles or war.

The commands were increased to four in 1920, each under a General Officer Commanding in Chief.

Present System of Administration

The essential features of the Army as constructed on its present basis will be found in "The Army in India and its Evolution" a publication issued in 1924 with the authority of the Government of India.

The Secretary of State, as one of His Majesty's Ministers has a special responsibility and authority in regard to the military administration in India.

The Secretary of State's principal adviser on Indian military affairs is the Secretary in the Military Department of the India Office. The post is filled by an officer of the Indian Army of high rank with recent Indian experience. The appointment is at present held by Field Marshal Sir Claude Jacob, G.C.B., K.O.F.I., K.C.M.G., who was formerly General Officer Commanding in-Chief of the Northern Command and officiated as Commander in

Chief from April 1925 to August 1925. The Military Secretary is assisted by one first grade staff officer, selected from the Indian Army in order that he may keep in touch with the current Indian affairs, the Military Secretary is expected to visit India during the tenure of his office. In addition, by a practice which has obtained for many years, a retired Indian Army officer of high rank has a seat upon the Secretary of State's Council.

The superintendence, direction and control of the civil and military government of India are vested in the Governor-General in Council, who is required to pay due obedience to all such orders as he may receive from the Secretary of State. The Viceroy or Executive Council exercises in respect of Army administration the same authority and functions as they exercise in respect of other departments of the Government in the first phase of the representative institutions conferred upon India by the Montagu-Chelmsford Reforms. Scheme Army expenditure and the direction of military policy have been excluded from the control of the Indian Legislature.

The Commander in Chief.—The next authority in the chain of administrative arrangements is His Excellency the Commander-in-Chief, who by custom is also the Army Member of the Viceroy's Executive Council. The appointment is held by His Excellency General Sir Philip Walhouse (retired) Bart. G.C.B., K.C.M.G., D.S.O., A.D.C. British Service who succeeded Field Marshal Sir William Birdwood. He is also a member of the Council of State. All the work connected with the administration of the Army, the formulation and execution of the military policy of the Government of India, the responsibility for maintaining every branch of the Army combatant and non-combatant, in a state of efficiency, and the supreme direction of any military operations based upon India are centred in one authority,—the Commander-in-Chief and Army Member. In addition, he administers the Royal Indian Marine and the Royal Air Force in India. The Commander-in-Chief is assisted in the executive side of his administration by 4 Principal Staff Officers, viz., the Chief of the General Staff, the Adjutant-General, the Quartermaster-General and the Master-General of Ordnance.

The Army Department.—The Department is administered by a Secretary who like other Secretaries in the civil departments, is a Secretary to the Government of India as a whole possessing the constitutional right of access to the Viceroy, he is also for the purposes of Sub-section 4, Section 26 of the Regimental Debts Act 1895 (58 Vict. C. 5) and the Regulations made thereunder Secretary to the Government of India in the Military Department, and for purposes of the Royal Indian Marine, Secretary to the Government of India in the Marine Department. He also exercises the powers vested in the Army Council by the Geneva Convention Act, 1911, so far as that Act applies to India under the Order in Council No. 1551 of 1915. He is assisted by a Deputy Secretary, an Establishment Officer, a Director of Military Lands and Cantonments, three Assistant Secretaries (one of whom is also Secretary of the Indian Soldiers' Board) and the Officer in-charge, Medal Distribution.

The Army Department deals with all army services proper, and also the administration of the Royal Indian Marine and the Royal Air Force in India in so far as questions regarding the orders of the Government of India are concerned. The Army Department Secretariat has no direct relations with commanders of troops or the staffs of formations subordinate to Army Headquarters. It has continuous and intimate relations with Army Headquarters in all administrative matters and is responsible for the administration of Cantonments, the estates of deceased officers and the compilation of the Indian Army List. The Army administration is represented in the Legislature by the Army Member in the Council of State and by the Army Secretary in the Legislative Assembly.

The Military Council—Is composed of the Commander in Chief as President, and the following members, namely: The Chief of the General Staff, as Vice-President, the Adjutant-General, the Quartermaster-General, the Master-General of Ordnance, the Secretary to the Government of India in the Army Department and the Financial Adviser Military Finance, representing the Finance Department of the Government of India. It is mainly an advisory body, constituted for the purpose of assisting the Commander in Chief in the performance of his administrative duties. It has no collective responsibility. It meets when convened by the Commander in Chief for the consideration of cases of sufficient importance and difficulty to require examination in conference. The heads of the minor independent branches of Army Headquarters and the directors of technical services attend when required.

Military Territorial Areas

Indian Territory is divided into four commands each under a General Officer Commanding in Chief and the Independent District of Burma under a Commander. The details of the organization are given in the table on the next page and it will be seen that Commands comprise 14 districts, 4 Independent Brigades Areas and 31 Brigades and Brigade Areas. The Northern Command with its headquarters at Meerut coincides roughly with the Punjab and North West Frontier Provinces; the Southern Command, with headquarters at Poona, coincides roughly with the Bombay and Madras Presidencies and part of the Central Provinces and Rajputana; the Eastern Command, with headquarters at Calcutta, coincides roughly with the Bengal Presidency and the United Provinces; the Western Command, whose headquarters are at Quetta, covers Sind and Baluchistan.

The General Officer Commanding in Chief of each command is responsible for the command administration, training and general efficiency of the troops stationed within his area, and also for all internal security arrangements.

Apart from the four commands, the only formation directly controlled by Army Headquarters is the Burma district which mainly because of its geographical situation cannot conveniently be included in any of the four command areas. The Assam Independent Brigade which was under the administrative control of the Government of India was transferred to the administrative control of His Majesty's Government from the 1st April 1927.

The distribution of the troops allotted to the commands and districts has been determined by the principle that the striking force must be ready to function in war, commanded and constituted as it is in peace. With this end in view the Army in India is now regarded as comprising three categories of troops:

- (1) Covering Troops,
- (2) The Field Army,
- (3) Internal Security Troops.

The role of the Covering Force is to deal with minor frontier outbreaks and in the event of major operations, to form a screen behind which mobilisation can proceed undisturbed. The force consists of approximately 12 infantry brigades with a due proportion of other arms.

The Field Army consists of 4 Divisions and 4 Cavalry Brigades. The Field Army is India's striking force in a major war.

Army Headquarters

The organization of the Army Headquarters with the Commander in Chief as the head is founded upon four Principal Staff Officers charged with the administration of—

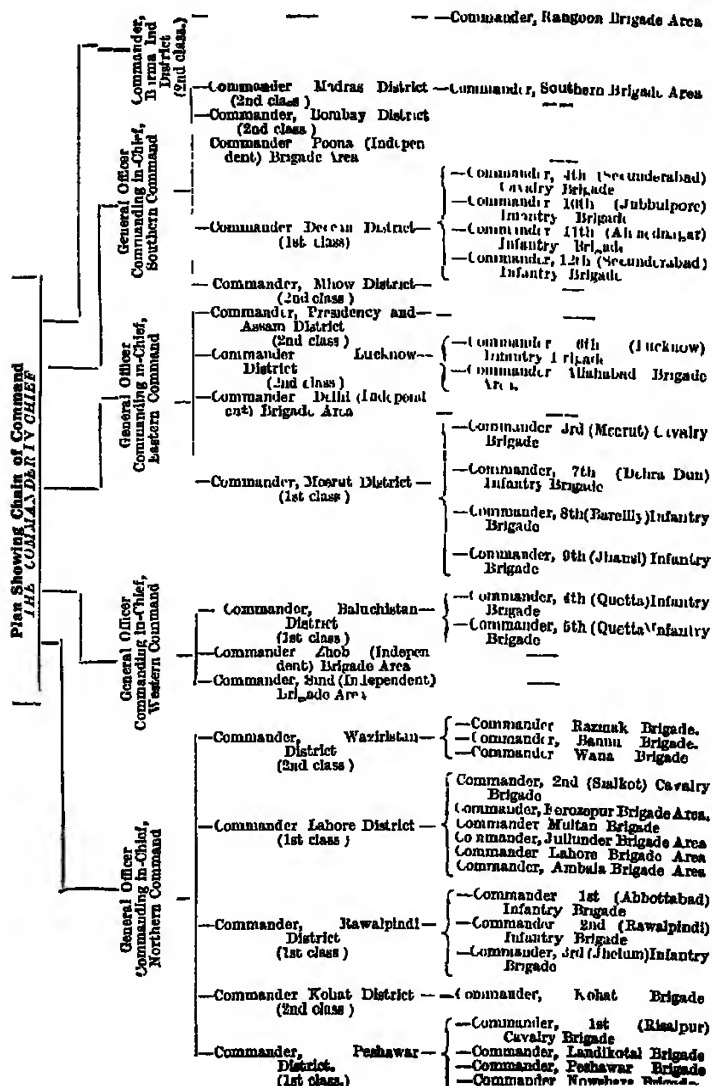

- (a) The General Staff Branch
- (b) The Adjutant General's Branch
- (c) The Quartermaster General's Branch
- (d) The Master General of Ordnance Branch

The General Staff Branch deals with military policy with plans of operations for the defence of India with the organization and distribution of the army for internal security and external war, the administration of the General Staff in India, the supervision of the training of the military forces for war, their use in war, the organization and administration of the general staff in India, the education of officers, the supervision of the education of warrant and non-commissioned officers and men of the Army in India, and inter-communication services.

The Adjutant General's Branch deals with all matters appertaining to the raising, organizing and maintenance of the military forces in officers and men, the peace distribution of the army, discipline, pay and pensions, martial law and international law, medical and sanitary matters affecting the Army in India, personal and ceremonial questions, prisoners of war, recruiting, mobilization and demobilization. The Judge Advocate General forms part of the Branch. The Director of Medical Services in India who was independent before the war is now included in the Adjutant-General Branch.

The Quartermaster General's Branch is concerned with the specification, provision, inspection, maintenance and issue of supplies, i.e., foodstuffs, forage, fuel etc., and is responsible for the following Services—Transportation, Movements, Quarters, Supply and Transport, Military Farms, Remounts, Veterinary, Garrison and Regimental Institutes. Also for the purchase of grains and of minor supplies not provided in bulk by the authority responsible for production and provision.

The Master General of Ordnance Branch controls the ordnance and clothing factories, is concerned with the provision, inspection, maintenance and issue of equipment and ordnance stores, clothing and necessities and conducts all matter relating to contracts in respect of food stuffs &c., and supply in bulk of general stores and materials. The Master General is also responsible for the design,

inspection, and supply of guns, carriages, tanks, small arms, machine guns, ammunition, chemical warfare appliances, etc. He also deals with questions regarding patents, royalties and inventions.

There are other branches of Army Headquarters administered by officers who are not classified as Principal Staff Officers but are not directly subordinate to any of the four Principal Staff Officers.

These are

(1) The Military Secretary, usually a Major General, who deals with the appointment, promotion and retirement of officers holding the King's Commission, the selection of officers for staff appointments and the appointment of officers to the Army in India Reserve of Officers. He is also the Secretary of the Selection Board.

(2) The Engineer in-Chief, also a Major General and head of the Corps of Royal Engineers in India. He is responsible for Engineer operations and Engineer Services during war and peace, the preparedness for war of the Engineer services. The supply of Engineer stores during war and peace. The construction and maintenance of all military works and the constructional efficiency, accuracy and economy of all projects and designs.

In addition to the above, the Army Headquarters staff includes certain technical advisers viz. the Major-General Cavalry (stationed at Secunderabad), the Major-General Royal Artillery (the Colonel, Royal Tank Corps), the Brigadier Royal Engineers, the Signal Officer in Chief, the Adviser and Secretary Board of Examiners and the Inspector of Physical Training.

Regular British Forces in India

The British cavalry and British infantry units of the army in India are units of the British service. No individual British service unit is located permanently in India. Units of the British Army are detailed for a tour of foreign service, of which the major part is as a rule spent in India. In the case of British infantry battalions the system is that one battalion of a regiment is normally on home service while the other is overseas. In the case of British cavalry the same arrangement cannot be applied, as one unit only comprises the regiment.

In Great Britain, in peace time, units are maintained at an establishment smaller than that required for war. In India the peace establishments exceed the war establishments in view of the fact that reserves of British personnel do not exist, and reinforcements must be obtained from Great Britain.

British Cavalry—There are 5 British cavalry regiments in India. The establishment of a British cavalry regiment is 27 officers and 571 other ranks.

British Infantry—The present number of British infantry battalions in India is 45, each with an establishment of 25 officers and 882 other ranks.

In 1921, an important change was made in the composition of a British infantry battalion in India by the inclusion of a proportion of Indian combatant ranks. Battalions had always maintained a quota of Indian followers, but up to 1921 the combatant personnel was entirely British. In 1921, on the abolition of the Machine Gun Corps, eight machine guns were included

in the equipment of a British infantry battalion. This number was increased to twelve in 1927. The peace establishment of Indian combatant personnel is fixed at one Indian officer and 230 Indian other ranks. The Indian platoon, as it is called, is transferred as a whole to another British battalion when the battalion to which it was originally attached proceeds on relief out of India.

Royal Artillery—Indians are employed as drivers and artificers in the Royal Horse Artillery and in field and medium batteries as drivers, gunners and artificers in mountain batteries and as gunners in heavy batteries. The peace organisation of the artillery at the present day is as follows.

Royal Horse Artillery—Comprises four batteries and four ammunition columns. Each battery is armed with six 18-pounder guns.

Field (Higher and Lower Establishment) Brigades

—Seven brigades on the higher establishment, each consisting of headquarters and four batteries. Three brigades on the lower establishment, each consisting of headquarters and four batteries. Of the seven brigades on the higher establishment four brigades consist of two batteries, each armed with six 18-pounder guns and two batteries each with six 4.5" howitzers. Three brigades consist of three batteries each armed with six 18-pounder guns and one battery with six 4.5" howitzers. Of the three brigades on the lower establishment two consist of three batteries each armed with six 18-pounder guns, and one battery with six 4.5" howitzers, and one brigade of two batteries armed with six 18-pounder guns, and two batteries armed with six 4.5" howitzers. Two guns in each battery are immobile.

Field (Reinforcement) Brigade—The reinforcement brigade consists of two double batteries, each armed with six 18-pounder guns, and two 4.5" howitzers.

The 1st Field Brigade and 2nd Divisional Ammunition Column Royal Artillery are mechanised. Other Royal Artillery units will be mechanised in due course.

Ammunition Columns—Two Divisional ammunition columns are maintained for the artillery of the first and second divisions, and one field ammunition column for the covering force brigade on the frontier.

Indian Mountain Brigades—Six brigades, each consisting of headquarters, one British light and three Indian mountain batteries also one unbrigaded mountain battery and one mountain Artillery Section for Chitral. The British battery and two Indian batteries per brigade are armed, with four 3.7" howitzers, the remaining batteries are armed with four 2.75" guns. The armaments of the Frontier posts at Kohat, Fort Lockhart, Idak, Wana, Thal, Chaman, Hindubagh, Malakand, Landi Kotal, Shagal, Chakdara and Fort Sandeman are also manned by personnel of Indian Mountain Brigades E & A.

Medium Brigades—Two brigades, each consisting of one horse-drawn and three tractor drawn batteries. Three batteries in each brigade, are armed with 6" howitzers and one battery with 60 pounder guns.

Heavy Brigade—Headquarters and one battery at Bombay and one battery at Karachi.

Air Aircraft—One battery, located at Bombay.

Artillery Training Centres—One centre at Muzra, for Indian ranks of R H A and of field and medium batteries and another centre at Ambala for Indian ranks of mountain batteries. These centres were created for the recruitment and training of Indian personnel. There is also a R. A. Boys Depot at Bangalore.

Engineer Services

The Engineer in Chief—The head of the Corps of Royal Engineers in India is directly responsible to His Excellency the Commander-in-Chief. The Engineer in Chief is not a staff officer but the technical adviser of the Commander-in-Chief on all military engineering matters and is responsible for:

- (1) Engineer operations and engineer services during war and peace
- (2) The preparedness for war of the engineering services
- (3) The supply of engineer stores during war and peace
- (4) The execution and maintenance of all military works
- (5) The constructional efficiency, accuracy and economy of all projects and designs submitted by him

The Organisation—The Engineer organisation of the Army consists of two main branches viz., the "Sappers and Miners and Pioneers and the Military Engineer Services.

The composition of the Corps of Sappers and Miners is as follows:

Queen Victoria's Own Madras Sappers and Miners, with headquarters at Bangalore. King George's Own Bengal Sappers and Miners, with headquarters at Bhoorkee. Royal Bombay Sappers and Miners, with headquarters at Kirkee.

The personnel of the Corps consists of Royal Engineer officers, Indian officers holding the Viceroy's commission, a certain number of British warrant and non-commissioned officers, Indian non-commissioned officers and Indian other ranks. Each Corps is commanded by a Lieutenant Colonel, who is assisted by two Majors, as Superintendents of Park and Instruction and Adjutant. Quartermaster two Subedar Majors, a Jemadar Adjutant and a Jemadar Quartermaster.

Field Troops are mounted units, trained to accompany cavalry, and are equipped to carry out hasty bridging, demolition and water-supply work. Field Companies are trained to accompany Infantry Divisional Headquarters. Companies are small units containing highly qualified tradesmen and are trained to carry out technical work in connection with field workshops. Army Troops Companies are somewhat smaller units than field companies, they are required to carry out work behind divisions under the orders of Chief Engineers, e.g., heavy bridging work, large water-supplies, electrical and mechanical installation.

The Military Engineer Services control all military works in India, and Burma except in the case of a few small outlying military stations, which are in charge of Public Works Department. They control all works for the Royal Air Force and all major works for the Royal Indian Marine, and they are charged

with all civil works in the North West Frontier Province and Baluchistan under the orders in each of these two areas, of the Chief Commissioner and Agent to the Governor-General. They also control civil works in Bangalore, under the Mysore Government.

The Engineer in-Chief is assisted by a Deputy Engineer in Chief (Works) and a Deputy Engineer in-Chief (Electrical and Mechanical). In each Command there is a Chief Engineer while in the Northern Command a Deputy Chief Engineer administers Military and Civil works in the N W F P and is Secretary P W D to the Chief Commissioner. The Chief Engineer Western Command, is the Secretary P W D to the Agent to the Governor-General in Baluchistan. Both at Army Headquarters and in Commands there are Staff Officers, E E and Technical Officers. At the headquarters of each district there is a Commander, Royal Engineers, assisted in certain districts by A C S R E Officers of the Barrack Department are also employed as District Stores Officers. Garrison Engineers are in charge of brigade areas and military stations, their charges being divided into subdivisions under Sub divisional Officers. The sub divisions are Buildings and Roads, Electrical and Mechanical and Furniture and Stores. There are sub-oversesers for Buildings and Roads and the Barrack Department subordinates in charge of Furniture and Stores are assisted by store keepers.

Royal Air Force in India

The Royal Air Force in India is controlled by the Commander in Chief in India as part of the defence services of the Indian Empire. The Air Force budget is incorporated in the Military Estimates. The Commander of the Air Force is the Air Officer Commanding in India is an Air Marshal whose rank corresponds to that of a Lieutenant General in the Army.

The headquarters of the Air Force is closely associated with Army Headquarters and is located with the latter at the seat of the Government of India. The Air Officer Commanding has a headquarters staff constituted in six branches, namely, air staff personnel, technical, stores, medical and chief engineer. The system of staff organisation is similar to the staff system obtaining in the Army. Broadly speaking the duties assigned to the divisions mentioned are those which are performed by the General Staff Branch, the Adjutant-General's and Military Secretary's branches, the Quartermaster-General's Branch, the Medical Directorate and the Engineer in Chief's branch respectively, of Army Headquarters.

Subordinate formations.—The formations subordinate to the Royal Air Force Headquarters are—

- (i) GROUP COMMAND, comprising Wing Stations of two squadrons each, on a station base
- (ii) Wing Command, comprising squadrons not on a station base
- (iii) Station Commands
- (iv) The Aircraft Depot
- (v) The Aircraft Park
- (vi) Heavy Transport Flight.
- (vii) B. A. F. Hill Depot, Lower Tor

Group Command—The Group Command is known as No. 1 (Indian) Group Headquarters, and is located at Peshawar. The Group Commander is a Group Captain, corresponding in rank to a Colonel in the Army. His staff is organised on the same system as that of the Headquarters of the B A F in India. The establishment of the Group consists of 4 officers and 16 airmen.

The subordinate units to No. 1 (Indian) Group Headquarters are as follows—

- No. 1 Wing Station, R.A.F., Peshawar
- No. 2 Wing Station, R.A.F., Bhalpur
- Army Co-operation squadron at Peshawar

Wing Command—There is one Wing Command only namely 8 (Indian) Wing It A F located at Quetta. The Wing Commander is an officer with Air Force rank corresponding to a Lieutenant-Colonel in the Army.

He is equipped with a staff organised on approximately the same system as the Headquarters of a Group. The Wing Establishment consists of 4 officers and 17 airmen.

Wing Station Commands—There are 2 Wing station commands in India one located at Peshawar and the other at Bhalpur. Each station consists of two squadrons on a reduced squadron basis with one administrative head i.e. Station Headquarters under the command of a Wing Commander. The strength of the Station Headquarters is 8 officers and 112 airmen, while that of the two squadrons totals 24 officers and 100 airmen. The wing Station at Bhalpur also administers the Parachute Section.

The Squadrons—Of the 8 squadrons 7 are extended along the North West Frontier from Quetta to Bhalpur, and one is stationed at Ambala.

The squadron is the primary air force unit, and it consists normally, of a Headquarters and three flights of aeroplanes. A flight can be detached temporarily but not permanently from its squadron as repair facilities, work shops and stores cannot economically be organised on anything less than a squadron basis. The squadrons headquarters comprises the officers and other ranks required for the command and administration of the squadron as a whole, it includes the workshops and repair units, the armours and equipment stores of the squadrons.

The number of aeroplanes in a squadron varies with the type of aeroplane with which the squadron is equipped, but speaking generally squadrons on a peace basis have twelve aeroplanes i.e., four in each of three flights. This does not however apply to the twin engine bombing squadrons.

Of the 8 squadrons 4 are equipped with Bristol Fighters and four with Wapitis and they are allotted for distant reconnaissance and bombing duties, of the other four, which are allotted for Army Co-operation duties, two squadrons are equipped with Bristol Fighters and two with Wapiti aircraft.

Squadron Establishment—The establishment of officers in a squadron consists of seven officers in the Headquarters, and fifteen officers allotted to flying duties. This allows a reserve of one officer for each of the operative flights.

The establishment of other ranks is 128 airmen.

The Aircraft Depot—The Aircraft Depot may be conveniently described as the wholesale store and provision department of the Royal Air Force. Technical stores are received from the United Kingdom, and in the first instance, held by this unit. It is also the main workshop and repair shop of the Force where all engine repairs, mechanical transport repairs, and aircraft repairs of any magnitude are carried out. The Depot is located at Drigh Road Karachi.

The Aircraft Park—Relatively to the Aircraft Depot, the Aircraft Park may be described as a central retail establishment, intermediate between the squadrons and the Aircraft Depot. It receives stores from the depot and distributes them to the squadron. The stocks held in the Park are however usually limited to items necessary at short notice for operations and the quantities held are kept as low as distance from the depot and local conditions will admit. In war, an Aircraft Park is intended to be a mobile formation though the aircraft Park in India cannot be made mobile under ordinary conditions. In peace the Aircraft Park is located at Lahore. New aeroplanes received from the United Kingdom are erected there, but no major repairs are undertaken. In addition to the above functions, practically the whole of the motor transport bodies required for R A F vehicles are built or repaired at Aircraft Park. The Heavy Transport flight is administered by this unit.

Composition of Establishments—The personnel of the Royal Air Force in India consists of officers warrant officers, non-commissioned officers and men in the ranks of the R A F of the United Kingdom, and Indian artificers, Mechanical Transport drivers and followers of the Indian Technical and Followers Corps R A F in India. The officers are employed on administration flying and technical duties but all with the exception of officers of the store and medical branches are required to be capable of flying an aeroplane. A proportion of airmen are also trained and employed as pilots for a period of five years, after which period they revert to their technical trades. Apart from these airmen all warrant officers, non-commissioned officers and aircraftmen are employed solely on technical duties. The only other flying personnel who are not officers or airmen pilots are air gunners and a certain percentage of wireless operators.

The warrant officers, non-commissioned officers and aircraftmen are employed at all units. The personnel of the Indian Technical and Followers Corps are employed as follows—

(a) Technical Section	Aircraft Depot.
(Artificers)	Aircraft Park
(b) M T Drivers Section	All Units
(c) Followers Section	All Units
The total establishment of the Royal Air Force in India is as follows—	
Officers	255
Airmen	1,938
Indian Officers, other ranks and followers	1,102
Civilians	146

The Royal Air Force Medical Services—In India, as in the United Kingdom, the Air Force has a medical service of its own. Flying must still be regarded as

present as an abnormal pursuit for the human being. It is carried out under conditions which differ widely from those on the ground. With the growth of aeronautics therefore, it was found necessary to create a separate department of medical science whose functions, broadly stated are to study the effect of flying upon the human constitution both mental and physical, to study also the effects of different forms of illness and physical disability upon flying efficiency and to apply in practical form the results ascertained. The essential object in view is to save life by ensuring as far as possible that those who fly are physically and psychologically fit to do so. The present establishment of the Royal Air Force Medical Service in India consists of 12 officers and 80 airmen. The Medical Administration is controlled by the Principal Medical Officer of the rank of Group Captain, on the staff of the Air Officer Commanding the R. A. F. in India.

Regular Indian Forces.

Indian Cavalry.—The present number of Indian cavalry regiments is 21.

The peace establishment of an Indian cavalry regiment comprises

14 British officers.

19 Indian officers

493 Indian non commissioned officers and men

Indian Infantry and Pioneers.—The establishment of the Indian Infantry is constituted as follows

	Battalions
14 Infantry regiments consisting of	101
3 Pioneer Corps consisting of	9
1 Independent Pioneer battalion (The Hazara Pioneers)	1
3 Regiments of Sappers and Miners	7
10 Gurkha regiments consisting of	20
—	—
36	138

The normal strength of an active battalion is—

	British Officers	Indian Officers	Indian other ranks
Infantry	12	20	708
Pioneers	11	15	681
Gurkhas	13	22	905

The strength of an infantry training battalion depends upon the number of battalions forming the regiment. The average is as follows—

British Officers 10, Indian Officers 17, and Indian other ranks 792

The strength of a Corps Headquarters of Pioneers is British Officers 8, Indian Officers 9, and Indian other ranks 809

The strength of the Independent Pioneer Battalion is British Officers 13, Indian Officers 17, and Indian other ranks 880

Reserves for these units have to be sufficient to provide for an actual shortage on mobilisation as well as for the maintenance of the mobilised unit at full strength for the first 3 months after mobilisation.

Reserve.—The conditions of the reserve are as follows—

(a) There are two classes in the reserve Class A and Class B. A reservist is eligible to serve in Class A up to 10 years' combined army and reserve service, and in Class B up to 15 years' combined service.

(b) Service in the reserve is compulsory except for Gurkhas, Hazara Pioneers and frontier personnel. On enrolment a man engages to serve at least 7 years in army service and to serve up to 15 years in combined army and reserve service if required to do so.

(c) Reservists will be trained for not more than 1 month annually in the cases of Class A and biennially in the case of Class B. During training the reservist will receive the full pay of a serving soldier.

(d) While not under training, the reservist will receive pay as follows—

Class A, Rs 7 per mensem

Class B, Rs 4 per mensem

(e) A reservist will be discharged from the service after 15 years' combined army and reserve service, when he will receive a pension of Rs 3 per mensem or, if he desires it, a gratuity of Rs. 300 in lieu. A reservist who is invalided from the reserve is granted a gratuity varying between 3 and 6 months pay and good conduct pay according to service.

The establishment of reservists is fixed as present as follows—

Cavalry	2,943
Artillery	2,320
Sappers & Miners	1,660
Indian Signal Corps	984
Infantry	22,960
Gurkhas	2,000
Pioneers	1,240
Independent Pioneers	81

Total 34,207

The Indian Signal Corps.—The Corps is organised on the same lines as a Sapper and Miner Corps, with a headquarters for recruiting and training personnel and detached field units for the various army formations. The head of the corps is the Signal Officer-in-Chief who belongs to the Royal Corps of Signals and is attached to the General Staff Branch at Army Headquarters as a technical adviser on questions connected with signals, and is also responsible for the technical inspection of all signal units. A chief signal officer with similar functions is attached to the headquarters of each Army Command. The British portion of the Corps has now been amalgamated with the Royal Corps of Signals.

The headquarters, termed the Signal Training Centre, India, are located at Jabalpur, and are commanded by a Colonel, assisted by a staff, British and Indian, organised on very much the same lines as the headquarters of a Corps of Sappers and Miners.

The various types of field units and the number maintained are—

Corps Signals Headquarters including Line and Wireless Company	2
Cavalry Brigade Signal Troops	4
Divisional Signals	4
Signal Parks	2
District Signals	3
Medium Brigade Royal Artillery Signal Section	1
Field Brigade Royal Artillery Signal Section	1

In addition, there is an Army Signal School which carries out the training of regimental signalling instructors.

The formation of the District signals units was effected in 1926 with the transfer of Communications on the North-West Frontier to the Posts and Telegraphs Department. This transfer of communications also made feasible the raising of the A and C troops of Cavalry Brigade Signals to include a Wireless Section each, the formation of two Corps Signal Headquarters and the formation of one Medium and one Field Brigade Royal Artillery Signals Sections. The District Signals are located at Peshawar, Waziristan and Kohat.

Royal Tank Corps—Six armoured car companies arrived in India in 1921. Two more companies arrived in 1925. Two Group

Headquarters were sanctioned in 1925. They are located as follows.—the Northern Group at Rawalpindi, this Group Headquarters commands companies in the Northern and Eastern Commands. The Southern Group at Poona. This Group Headquarters commands companies in the Southern and Western Commands. There is a school at Ahmednagar for the training of R T C personnel and the conduct of experiments. The Colonel Royal Tank Corps, at Army Headquarters acts as Technical Adviser on Tanks and Armoured Cars.

The smallest tactical unit is the sub-section (two armoured cars). There are two sub-sections in a section, and 3 sections in a company. Each section is commanded by a captain or a subaltern, and the company by a major. In addition to 12 armoured cars (4 in each section), there is a mechanical reserve of 4 cars on the headquarters of each company.

5 Companies are equipped with Crossley armoured cars.

1 Company is equipped with Rolls-Royce 1921 pattern.

1 Company is equipped with Rolls-Royce 1914.

1 Company is equipped with Guy (six wheeled) armoured cars.

With the exception of the company with Rolls Royce 1914 pattern which have only one Vickers gun all the remaining armoured cars are armed with two Vickers guns.

The establishments of the Royal Tank Corps formations are shown below—

	British Officers	British other ranks	Followers	Motor cars	Motor cycles	Armoured cars	Lorries
Group Headquarters	2	2					
Tank Corps School	6	49	15	1	2	9	9
Armoured Car Company	12	145	38	2	6	15	10

Medical Services.—The military medical services in India are composed of the following categories of personnel and subordinate organizations—

(a) Officers and other ranks of the Royal Army Medical Corps serving in India,

(b) Officers of the Indian Medical Service in military employment.

(c) The Indian Medical Department, consisting of two branches, viz., (i) assistant surgeons and (ii) sub-assistant surgeons.

(d) Queen Alexandra's Imperial Military Nursing Service.

(e) The Queen Alexandra's Military Nursing Service for India.

(f) The Army Dental Corps.

(g) The Indian Military Nursing Service.

(h) The Indian Hospital Corps.

Of these categories the officers and men of the Royal Army Medical Corps and the Army Dental Corps, the assistant surgeons of the Indian Medical Department and the Queen Alexandra's Imperial Military Nursing Service and the Queen Alexandra's Military Nursing Service for India are primarily concerned with the medical care of British troops, while the officers of the Indian Medical Service, the sub-assistant surgeons of the Indian Medical Department and the Indian Military Nursing Service are concerned, primarily, with the medical care of Indian troops. The Indian Hospital Corps serves both organizations.

Civilians of miscellaneous classes employed by the Army in Waziristan are given medical treatment in military hospitals, and arrangements have been made with the Headquarters of the Indian Red Cross Society for the medical

treatment and care of cases amongst Indian soldiers and followers of the Indian Army for chronic diseases, such as tuberculosis, leprosy and diabetes.

Indian Army Service Corps.—The Indian Army Service Corps is the counterpart of the Royal Army Service Corps of the British Army. It has developed from the Commissariat Department of an earlier period, and its immediate predecessor was the Supply and Transport Corps, by which name the service was known up to 1923. The Indian Army Service Corps which is under the control of the Quartermaster General, is constituted in three main branches, namely, (a) Supply (b) Animal transport, and (c) Mechanical transport. The latter is constituted upon a special basis, which is, generically, a sub-division of the Royal Army Service Corps organisation.

The strength of the establishment is shown by categories in the following table—

SUPPLY	
Officers with King's commission	186
Indian officers	63
British other ranks	355
Civilians	750
Followers	2,776
Total	4,134

ANIMAL TRANSPORT	
Officers with King's commissions	74
Indian officers	156
British other ranks	58
Indian civilians	123
Saddar lance naks and sarwans	280
Indian non-commissioned officers and drivers	1,567
Artificers and followers	1,620
Total	4,878

There are also 1,576 driver reservists.

The total numbers of mules and camels maintained under the present organisation, including the depots and the detachment in Kashmir are 14,512 and 4,704 respectively. There are also 886 pack and draught horses, 468 ponies and 12 bullocks. Wheeled and pack transport are combined. The company on the lower establishment represents the pre-war "cadre," other companies being maintained in peace-time at full war establishment.

MECHANICAL TRANSPORT	
Officers with King's commissions	201
Indian officers	78
British other ranks	408
Indian other ranks	3,298
Indian civilians	419
Indian artificers	1,860
Followers	816
Total	7,000

There are also 2,588 reservists.

The mechanical transport establishment consists of the following—

(a) Field units—

11 M. T. Companies, consisting of 11 headquarters, 30 service sections (higher establishment), 5 service sections (lower establishment) and 10 sections in cadre.

1 Independent section (higher establishment)

6 M. T. Companies for motor ambulance convoys consisting of 6 headquarters 1 section (higher establishment) 11 sections (lower establishment)

(b) Maintenance units—

4 Heavy Repair shop

4 Mobile repair units,

1 Central M. T. Stores Depot.

M. T. technical inspectorate M. T. depot for training Indian drivers Vehicle reception depot Bannu Workshop section

Apart from units and vehicles employed in the conveyance of military stores, the mechanical transport service also provides motor ambulance convoys for hospitals and field medical units, and vehicles for other miscellaneous purposes. The total establishment now consists of 2,088 vehicles with 109 motor cycles.

The mechanical transport was taken over by the Indian Army Service Corps in 1927. At present the officers of the service are mainly drawn from the Royal Army Service Corps since at present there are no facilities in India for training officers in every branch of mechanical transport duties. The establishment of officers includes, however, a certain number of King's commissioned officers belonging to the Indian Army. The British subordinates of the service are drawn entirely from the Royal Army Service Corps.

The Ordnance Services which are under the M. G. O. may be broadly described as the agency whose duty it is to supply the army with munitions of war, such as small arms, guns, ammunition and other equipment of a technical military character and also, under an arrangement introduced in recent years, with clothing and general stores other than engineering stores. A central disposal organisation is in operation under the control of the Master General of Ordnance to dispose of the Surplus Stores and waste materials of the various services of the Army and the Royal Air Force in India to the best advantage of the State.

Army Remount Department.—The following are among the most important duties for the remount service.—The provision of animals for the Army in India. The enumeration throughout India of all animals available for transport in war. The animal mobilisation of all units, services and departments of the Army. A general responsibility for the efficiency of all the animals of the army both in peace and war. The administration of the remount squadron formed

in 1922 as a nucleus for expansion into three squadrons on mobilisation. Breeding operations of a direct character.

The department is organised on lines corresponding to the remount service in the United Kingdom. Its composition is as follows: The Remount Directorate at Army Headquarters consisting of one Director and a Deputy Director; 4 Remount officers one attached to each Command Headquarters, 6 Superintendents of Remount Depots, 5 District Remount officers of horse breeding areas and the Ahmednagar Stud 16 Assistant Remount officers and 8 Veterinary officers.

Veterinary Services in India.—The Veterinary services are responsible for the veterinary care, in peace and war of animals of British troops, Indian cavalry and artillery, I A S C units, the remount department (excluding horse-breeding operations), etc. The veterinary services include The establishment of Royal Army Veterinary Corps officers, serving on a tour of duty in India and those of the continuous service cadre. The establishment of warrant and non-commissioned officers India Unattached List, and veterinary assistant surgeons of the Indian Army Veterinary Corps.

The Indian Army Veterinary Corps is organised in 12 sections, attached in peace-time to Class I veterinary hospitals at certain important stations.

Military Farms Department.—This department, which is under the control of the Quartermaster-General consists of two branches:—

(i) The military grass farms, which provide fodder for the army

(ii) The military dairy farms, for the provision of dairy produce for hospitals, troops and families

Educational Services.—The education of the army is under the control of the Army Educational Corps and of Indian officers borne supernumerary to the establishment of units of the Indian Army. The establishment is as follows including training schools:—

British officers	Indian officers	B O	I O	Civilians
61	38	182	34	284

Terms of service in the Indian army are as follows:—

Cavalry, 7 years service in army and 8 years in the reserve.

Artillery, 7 years' service in army and 8 in the reserve for gunners and drivers (horse), drivers (mechanical transport) 8 years in army and 9 years in the reserve, and 4 years service in army for Heavy Artillery personnel.

S & M. Corps, 7 years service in army and 8 in the reserve

Indian Signal Corps, 7 years' service in army and 8 in the reserve

Infantry and Pioneers (except Gurkhas, the 4th Hazara Pioneers and trans-frontier personnel of the Infantry other than Orakzais), 7 years in army service and 8 years in the reserve.

Gurkhas, Hazara Pioneers and trans-frontier personnel of infantry, 4 years service in army

Indian combatant personnel of British Infantry 6 years in army

Indian Military establishments of the Indian Army Ordnance Corps, 4 years' service in the army

Animal transport personnel of the Indian Army Service Corps, drivers of mechanical transport and all combatants of the Army Veterinary Corps, 6 years service in army and 8 in the reserve.

All combatants in the Works Corps, 2 years service in army

Bandmen, musicians, trumpeters, drummers buglers fliers and pipers, 10 years' service in army

Except in the case of those enrolled in the Works and of those who are non-combatants, all school masters, clerks artificers, armourers, engine drivers, farriers, carpenters tailors and bootmakers, 10 years' service in army

The period laid down for service in the army is the minimum and may be extended. Combatants may be enrolled direct into the Reserve, in which case there is no minimum period of service, but no one is allowed to serve in the reserve or in any class of the reserve for a longer period than is permitted by the regulations in force.

Frontier Militia and Levy Corps.—These forces are 'Civil' troops, i.e., they are administered and paid by the Civil authorities and not by the Army. They are, however, officered by Officers of the Regular Indian Army. These forces were raised for duty on the North West Frontier and at present consist of the following:—Kharan Militia, Tochi Scouts, South Waziristan Scouts, Chitral Scouts, Gilgit Scouts, Zhob militia and the Mekan Levy Corps.

The Auxiliary Force.

After the war, the question of universal training for European British subjects came up for consideration, and it was decided that in India, as elsewhere in the Empire, the adoption of compulsory military service would be undesirable. It was recognised, however, that India needed some adequate auxiliary force, if only on a voluntary basis, that could be trained to a fairly definite standard of efficiency and in the result, an Act to constitute an Auxiliary Force for service in India was passed in 1920. Under this Act membership is limited to European British subjects, and the liability of members for training and service is clearly defined. Military training is graduated according to age, the more extended training being carried out by the younger members, the older members being obliged to fire a military course only. It was laid down that military service should be purely local. As the form of service that would be most suitable varies largely according to localities, the local military authorities, acting in consultation with the advisory committee of the Auxiliary Force area, were given the power of adjusting the form of training to suit local conditions.

The Auxiliary Force comprises all branches of the service, cavalry, artillery, engineers infantry—in which are included railway bat-

tallions,—machine gun companies a Signal Company, and the Medical and Veterinary Corps. Units of the Auxiliary Force are under the command of the local military authority, and the latter has the power of calling them out for service locally in a case of emergency. Their role is to assist in home defence. Training is carried on throughout the year. Pay at a fixed rate is given for each day's training and, on completion of the scheduled period of annual training, every enrolled member of the force is entitled to a certain bonus. Men enrol in the Auxiliary Force for an indefinite period. An enrolled person is entitled to claim his discharge on the completion of four years service or on attaining the age of 45 years. Till then he can only be discharged on the recommendation of the advisory committee of the area.

The duties connected with the Defence Light Sections at Calcutta, Bombay, Karachi and Rangoon are performed by the Field Companies R. E. (A. F. I.) at those stations, assisted by Indian ranks of Sapper and Miner Units.

Indian Territorial Force

The Territorial Force is one of the special aspects of the Indianisation of the military services. The force is intended to cater amongst other things for the military aspirations of those classes of the population to whom military service has not hitherto been a hereditary profession. It is intended, at the same time, to be a second line to and a source of reinforcement for the regular Indian army. Membership of the force for this latter reason carries with it a liability for something more than purely local service or home defence. It may, in certain circumstances involve service overseas. The force is the direct successor of the Indian section of the Indian Defence Force created during the war. It has been modelled on the old militia in England. The essence of its scheme of organisation consists in training men by means of annual embodiment for a short period in successive years. By this means Indian Territorial Force units can be given sufficient preliminary training in peace to enable them, after a comparatively short period of intensive training to take their place by the side of regular units in war.

The Indian Territorial Force consists at present of three main categories, provincial battalions, urban units and the university training corps units. The last are recruited from the staff and students of Indian universities. They are trained all the year round by means of weekly drills during terms and a period of 15 days in camp and are equipped with a permanent staff of British instructors. On ceasing to belong to a university, a member of the corps is discharged. In the case of the university training corps units there is no liability to perform the liability to render actual military service. Their purpose is mainly educative, to inculcate discipline and form character. But, incidentally, they are expected to be a source of supply of both officers and men for the provincial and urban units.

The members of the provincial battalions accept the full liability for service which has been mentioned. Seven such battalions were constituted in the first instance. The number is

now eighteen and, though the unit establishment has not been completely filled in all cases the movement has already achieved a greater degree of success than might have been anticipated at so early a stage. Although for the present the Infantry arm only has been created with the addition of the I.T.F. Medical Branch, the force by law may include every other arm service.

Men enrol in the provincial battalions for a period of six years, the period being reduced to four years in certain cases. On the completion of the first period they can re-enrol voluntarily for further specified periods. During his first year every man does preliminary training for one calendar month and during every year he evolves one month's periodical training. Members of urban units have only a provincial liability. 4 such units were constituted in 1928 in Bombay, Madras, and the United Provinces, one of these being an entirely Indian battalion. Members enrolled for a period of 6 years and train all the year round. During his first year every man does 21 days preliminary training and in every subsequent year 16 days' periodical training.

The Indian State Forces.

The Indian State Forces formerly designated Imperial Service Troops, consist of the military forces raised and maintained by the Rulers of Indian States at their own expense and for State service. It has been the custom in emergency for State troops to be lent to the Government of India, and the Government of India have on many occasions received military assistance of great value from this source. But the rendering of such aid is entirely at the discretion of the Ruling Princes and Chiefs. Government on the other hand, provide permanently a staff of British officers termed Military Advisers and Assistant Military Advisers to assist and advise the Ruling Princes in organising and training the troops of their States.

After the war had ended the Indian States like the Government of India, undertook a military reorganisation, which in a number of cases, has already been carried out. The principal feature of the new arrangements as adopted more or less generally is that in future the Indian State Forces should be composed of three categories of troops, namely

Class A—Troops in this class are organised on the present-day Indian Army system and establishments, and with some exceptions, are armed with the same weapons as corresponding units of the regular Indian Army.

Class B—These troops consist of units which are, in most cases little inferior in training and discipline to troops of Class A, but they are not organised on present-day Indian Army establishments. They have as a rule, retained the system of the pre-war formations. Their standard of armament is pitched lower than that of Class A troops.

Class C—These troops consist in the main of militia formations, which are not permanently embodied. The standard of training, discipline and armament, prescribed for this class, is generally lower than the standard prescribed for Class B troops.

The authorized and actual strength of the Indian State Forces on the 1st October 1929 amounted to—

	Authorized strength	Actual strength to
Artillery	1 414	1 445
Cavalry	9 314	8,880
Infantry	20 466	21,098
Camel Corps	463	462
Motor Machine Gun sections	70	28
Sappers	1 170	1,014
Transport Corps	1 609	1 606
Grand total	43,603	38 121

Officers

There are two main categories of officers in the Indian Army, those holding the King's Commission and those holding the Viceroy's Commission. The latter are all Indians apart from the Gurkha officers of Gurkha battalions, and have a limited status and power of command both of which are regulated by the Indian Army Act and the rules made thereunder. Until recent years Indians were not eligible for King's Commissions, but a limited number can now obtain such commissions on entry into the Indian Army through the Royal Military College, Sandhurst and the Royal Military Academy, Woolwich.

King's Commissioned officers for the Indian Army are obtained from two main sources from among the cadets who pass through the Royal Military College, Sandhurst, and by the transfer to the Indian Army of officers belonging to British units. The former is the principal channel of recruitment the latter being only resorted to when owing to abnormal wastage or for some other special reason, requirements cannot be completed by means of cadets from Sandhurst. A third source is from among University candidates. When a cadet has qualified at Sandhurst and has received his commission he becomes, in the first instance, an officer of the Unattached List and is posted for a period of one year to a British battalion or regiment in India, where he receives a preliminary training in his military duties. At the end of the year he is posted as a squadron or company officer to a regiment or battalion of the Indian Army. Administrative services and departments of the army draw their officers from combatant units as it has hitherto been regarded as essential that every officer should, in the first instance, receive a thorough grounding in combatant duties, and acquire at first hand an intimate knowledge of the requirements of the combatant arms.

The promotion in rank of King's commissioned officers of the Indian Army is regulated by a time-scale up to the rank of Lieutenant Colonel but is subject also to certain professional examinations and tests being successfully passed. The rank of Lieutenant-Colonel is in normal course attained at 26 years' service; promotion beyond this rank is determined by selection.

Indian Officers.—One of the most momentous decisions of the Great War, so far as the Indian Army is concerned, was that which rendered Indians eligible to hold the King's commission in the army. King's commissions are obtainable by Indian gentlemen in three ways: (1) By qualifying as a cadet through the Royal Military College Sandhurst or the Royal Military Academy Woolwich. Examinations are held twice a year, in India for the selection of suitable candidates for admission. (2) By the selection of specially capable and deserving Indian officers or non-commissioned officers of Indian regiments promoted from the ranks or those appointed direct as jemadar. These receive their commissions after training at the Royal Military College or Academy as Cadets and qualifying in the usual way. (3) By the bestowal of honorary King's commissions on Indian officers who have rendered distinguished service, but whose age and lack of education preclude their being granted the full King's commission. The first two avenues of selection mentioned afford full opportunity to the Indian of satisfying a military ambition and of enjoying a military career on terms of absolute equality with the British officer who, as a general rule, also enters the army by qualifying at Sandhurst or Woolwich. Ten vacancies at Sandhurst and three at Woolwich are reserved annually for Indian cadets.

A further measure adopted by the Government was the establishment of the Prince of Wales Royal Indian Military College at Dehra Dun a Government institution for the preliminary education of Indians who desire to qualify for the King's commission in the army through the Royal Military College Sandhurst or the Royal Military Academy, Woolwich. The arrangements so far made enable a maximum of 70 boys to be in residence at the college at any one time and the normal course of education is planned to occupy six years. In February 1929 it was decided that eight units of the Indian Army should be completely Indianized. The units selected for Indianization were 7th Light Cavalry 16th Light Cavalry 2nd Bn., Madras Pioneers, 4/19th Hyderabad Regiment, 5th Royal Battalion, 5th Mahratta Light Infantry, 1/7th Rajput Regiment (Q V O L I) 1/14th Punjab Regiment, 2/1st Punjab Regiment.

Training Institutions

The following institutions exist in India for the higher training of military personnel and for the education of instructors for units—

Staff College, Quetta.
Senior Officers School, Belgaum.
School of Artillery, Kakul.
Equitation School, Bangalore.
Small Arms Schools: (India), at Pachmarhi and Ahmednagar.
Army School of Physical Training, Ambala.
Army Signal School, Poona.
Royal Tank Corps School, Ahmednagar.
Army School of Education, Belgaum.
Army School of Cookery, Poona.
Army Veterinary Schools, Ambala and Poona.
Indian Army Service Corps Training Establishment, Rawahindi.
Indian Army Ordnance Corps School of Instruction, Kirkee.

The object of these Schools is to ensure to all the units throughout the army a constant supply of officers, warrant officers, non-commissioned officers and men, provided with a thorough up-to-date knowledge of various technical subjects and with the ability to pass on this knowledge.

Following the procedure adopted at Home, the Small Arm and Machine Gun Schools were amalgamated in February 1927. Instruction in the rifle, light gun etc., is carried out at Pachmarhi and in the machine gun at Ahmednagar.

The King George's Royal Indian Military Schools at Jhelum, Jullundur and Ajmere, and the Kitchener College, Nowgong, also exist for the education of the sons of Indian soldiers with a view to their finding a career in the Indian Army. The latter at present assists in the training of Indian N. C. O.s for promotion to Victory's Commission. The Prince of Wales's Royal Indian Military College at Dehra Dun exists for the preliminary education of Indians who desire to qualify for the King's Commission in the Army through Sandhurst or Woolwich.

Army in India Reserve of Officers.—Previous to the Great War there existed what was called the Indian Army Reserve of Officers, a body of trained officers available to replace casualties in the Indian Army. The war proved that for many reasons this reserve did not fully meet requirements and in 1922 the Army in India Reserve of Officers was constituted.

The revised Regulations for the A. I. R. O. published in 1926 provide that the following gentlemen may be granted commissions in the Reserve—

- (1) Officers who having held King's commissions and retired from H. M.'s forces.
- (2) Officials, other than Military officers, serving under the Government of India or a local Government.
- (3) Private gentlemen residing in India, possessing the requisite qualifications and previous training.

The Reserve comprises each arm and branch of the Army and the officers are posted to definite branches and units.

All officers are required to undergo periodical training up to a maximum of 30 days a year and receive pay and allowances admissible to regular officers of the same rank and arm of the service, during training.

Members of the Auxiliary Force, India, may become "officers designate" for the grant of commissions in the A. I. R. O., upon the calling to army service of that reserve.

Officers and officers designate receive Rs. 200 annually as a retaining fee, and an outfit allowance of Rs. 400, on joining.

The strength of the Reserve on the 1st January 1931 was 1,671.

Recruitment for the Reserve has been extended to Ceylon, the number to be commissioned in Ceylon being limited to 50.

The Fighting Races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experience

of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various castes and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infantry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, of whom there are twenty complete battalions which during the war were considerably increased. As fighters in the hills they are unsurpassed even by the Pathans in the North-West Frontier, but the Garhwals and Kumaonis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army and have sustained the English flag in every campaign in the East. Their high caste and consequent prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish many battalions. The Garhwals are Hill Rajputs, good and gallant soldiers, who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which existed in 1914 have since been increased to four. The Jats are a fine and warlike race of Hindus found in the Delhi and Kohlik districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji, the founder of the Mahatta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned, other caste men from the south and other parts of India have filled the ranks of the Pio-

peer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged.

During the war the Victoria Cross was awarded for conspicuous gallantry to 2 Indian officers 4 non-commissioned officers and 6 other ranks of the Indian Army.

The Military Cross was awarded to 96 Indian Officers for distinguished service rendered during the Great War and to 3 Indian Officers for service in Waziristan.

A large number of Indian Officers and men were also granted foreign decorations.

Summary of India's Effort in the War—In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war are reviewed.

His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks enlistments during the war for all branches of the service amounted to 791,000 making a total combatant contribution of 985,000. Of this number, 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personnel has thus been 1,457,000, of whom 948,000 have served overseas. Casualties amounted to 106,594, which include 36,694 deaths from all causes. The number of animals sent overseas was 175,000.*

Budget Expenditure on National Defence

A part of the Defence expenditure on the Indian Budget is incurred in England, the nature of such expenditure being indicated in the detailed Tables of Army, Marine and Military Engineer Services expenditure. This expenditure is met by transfer of funds from India. From the 1st April 1920 to the 31st March 1927, the accounts were prepared on the basis of the rate of 2s per rupee for the conversion of English sterling transaction into rupees. From the 1st April 1927 the accounts

are being prepared at the standard rate of 1s 6d per rupee.

As a rule the receipts collected by the various departments are not set off against expenditure as appropriations in aid, but are shown separately on the receipts side of the budget. This is especially the case with the receipts of the Military Departments which amount to considerable sums.

The Provincial Governments incur no expenditure for Military purposes.

SUMMARY OF DEFENCE EXPENDITURE (Gross)

Non-effective	8,43 00	8,54,04	8 54,14
Grand Total	52,97,98	53 24,54	52,21,78

The amounts expended in England on effective services consist of such charges as payments to the War Office and Air Ministry in London in respect of British Forces serving in India, the transport to India of these forces and payments on account of stores taken to India by British Forces educational establishments in England for Indian Services, leave pay of Indian and British service Officers on the Indian Establishments purchase of imported stores, etc. The expenditure on non effective services consists of payments to the War Office in London for retired pay to British forces for services in India and to non-effective and retired officers of the Indian Service, and of various gratuities.

Although a sum of Rs 543.5 millions only has been allotted in the Budget for 1930-31 to

meet the net expenditure on Military Services, Rs 579.7 millions (including receipts) will be available for expenditure under the heading 'Military Services' made up of Rs.44.2 millions for expenditure in India and Rs 184.5 millions in England.

The gross working expenses of military establishments, such as bakeries pasture and dairy farms, army clothing factories and storage depots, army ordnance factories and base mechanical transport workshops are included in the Budget.

The division of expenditure on *Military Engineer Services* between India and England is as shown below

	1928-29	1929-30	1930-31

THE EAST INDIES SQUADRON

Since 1908 a squadron of the Royal Navy, known as the East Indies Squadron, has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition, the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1908 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1908, when the policy of withdrawal from Eastern waters was inaugurated, it consisted of two second class and two third class cruisers, and remained at this strength until 1910 when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were lent from the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship *Swift*

sure had taken the place of the second class cruiser which had been flagship, and a modern second class cruiser replaced the *Perseus*.
 The Squadron in 1930.—The composition of the Squadron (Fourth Cruiser Squadron) is as follows —

"*Kilnham*" (Flag), Cruiser 9770 tons,
 "Emerald", Cruiser, 7550 tons "Enterprise",
 Cruiser 7550 Sloop "Crocus", "Cyclamen",
 and "Lupin" Special Service vessel "Irid",
 (Senior Naval Officer, Persian Gulf) Survey
 Ship "Ormonde."

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details —

Received from	Nature of Service.	Total
		£
India	Maintenance of His Majesty's Ships in Indian Waters.	100,000
	Indian Troop Service (on account of work performed by the Admiralty)	3,400
	Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf	64,000
Australian Commonwealth Dominion of Canada	Contributions on account of liability for Retired Pay of Officers and Pensions of Men lent from the Royal Navy	10,800
Australian Commonwealth Do	Survey of the N W Coast of Australia	7,500
Dominion of New Zealand	Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve	41,600
	Maintenance of an Australasian Squadron and of the Imperial Navy generally, also of a branch of the Royal Naval Reserve	100,000
Union of South Africa	General maintenance of the Navy	85,000
Newfoundland	Maintenance of a branch of the Royal Naval Reserve	3,000
	Total	415,800

India's Marine Expenditure

Since 1909 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy Under existing arrangements which date from 1898-7, the subsidy of £100,000 a year is paid for the upkeep of certain ships of the East India Squadron which may not be employed beyond prescribed limits, except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

The question of a new distribution of the burden of the cost of Imperial Naval defence was discussed at the Imperial Conference in London in October—November 1926. The matter appeared to be one on which the delegates could form no new decision without further consultations in their respective capitals and no resolution was passed.

The Royal Indian Marine has been reorganised so as to form the nucleus of an Indian Navy. The R I M Ship "Dakota" has been reconconditioned for use as a Depot Ship. Three of the R I M Ships have been reconconditioned for use as sloops of war in the R I M. A fourth sloop for the re-organised service is under construction in England.

ROYAL INDIAN MARINE

The Royal Indian Marine (The Sea Service under the Government of India) traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settle ments from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the *Dragon* and *Hoseander* (or *Oslander*), were despatched from England in 1612 under a Captain Beest, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows —

Hon E I Co's Marine	1612—1686
Bombay "	1686—1830
Indian Navy "	1830—1863
Bombay Marine	1863—1877
H M Indian Marine	1877—1892
Royal Indian Marine	1892, Present day

The Marine has always been most closely connected with Bombay and in 1688 when the E India Co took over Bombay, Captain Young of the Marine was appointed Deputy

Governor From then until 1877 the Marine was under the Government of Bombay and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Director

War Service of the Marine

1612-1717 Continuous wars against Dutch Portuguese and Pirates for supremacy of West Coast of India 1744 War with France capture of Chandernagore and French ship in dionne In 1756 Capture of Castle of Gheria 1774 Marhatta War capture of Tannah. Latter part of the eighteenth century, war with French and Dutch Capture of Pondicherry Trincomalee Jafnapatam, Colombo, etc 1801 Egyptian campaign under Sir Ralph Abercrombie 1803 War with France 1810 Taking of Mauritius and capture of French ship in Port Louis Early part of the nineteenth century suppression of Jowami Pirates in the Persian Gulf 1811 Conquest of Tara. 1813 Expedition against Sultan of Bampur 1817 18 Marhatta War, capture of Forts at Severndroog 1819 Expedition to exterminate piracy in the Persian Gulf 1820 Capture of Moehs 1821 Expedition against the Beni Koo-Ali Arabs 1824-26 First Burma War 1827 Blockade of Berbera and Somali Coast 1833 Defeat of Beal Yaa Pirater 1838 Expedition to Afghanistan and capture of Karachi 1838 Capture of Aden 1840-42 War in China 1843 Scinde War Battle of Meeanee capture of Hyderabad 1845-46 Maori war in New Zealand 1848-49 War in Punjab, siege of Multan 1852 Second Burma War, capture of Rangoon Martaban Basmeln Prome and Pegu 1855 Persian War capture of Bushire Muhammarah and Ahwar 1855-57 War in China 1857-59 The Indian Mutiny 1859 Capture of the Island of Beyt. 1860 China War, Canton Taku Forts, Fatahan and Peking 1871 Abyssinian War 1882 Egyptian Campaign 1885 Egyptian Campaign 1885 Third Burma War 1890 Chin Lohai Expedition 1896 Suakin Expedition 1897 Expedition to Intirbe Mombasina in Africa 1899-1902 S African War 1900-01 Boxer Rebellion in China relief of Peking 1902-04 Somaliland Expedition, Suppression of Arms Traffic operations, Persian Gulf 1912-14

During the War 1914-1918 Royal Indian Marine Officers were employed on many and various duties Royal Indian Marine Ships "DUFFERIN" "HARDEN" "NORSEBROOK," "LAWRENCE," "DAKOTA" and "MINTO" had their guns mounted and served as Auxiliary Cruisers Officers also served in the Royal Navy in the Grand Fleet Mediterranean North Sea, North Red Sea and Caspian Sea Fleets

In addition to transport duties in Indian Ports Officers were sent to Marseilles, East Africa and Egypt for such duties, and on the entry of Turkey into the War were employed on duties towing and manning River Craft and Barges to and in Mesopotamia and it was necessary to enlist a number of Temporary Officers, Warrant Officers and men to the numbers of approximately 240 60 and 2000 respectively for the e and other duties

When the War Office assumed full control of Operations in Mesopotamia a large number of Regular and Temporary Officers and men were seconded to the Royal Engineers and General Service respectively for duties in the Inland Water Transport which controlled all River Transport work in that country, and these officers held many important executive appointments in that unit.

The movements of all sea transports between India and the various theatres of War were controlled by Marine Officers

Trawlers were built in the Bombay and Calcutta Dockyards and mine sweeping operations were carried out with these and launches off Bombay and elsewhere, the trawlers were also used for towing duties

Retired Royal Indian Marine Officers were employed on naval transport duties in England and France and also in very responsible positions with the Inland Water Transport in France

Service in the War 1914 18.—The Royal Indian Marine though a small Service compared with the Army and Navy played a very active and conspicuous part in the European War These are set out in detail in the Indian Year Book for 1922 and earlier editions (q v pp 202 et seq)

Reorganisation Schemes.—After the War the Government of India asked Admiral of the Fleet Lord Jellicoe, who was visiting India, to draw up a scheme for the reorganisation of the Service His valuable suggestions were unfortunately too ambitious for Indian finances and could not be accepted

Shortly afterwards the Fisher Committee arrived in India to report on the Indian Army, and although the R.I.M. was not included in their terms of reference, they strongly recommended that the R.I.M. should be reorganised as a combatant service The Government of India in 1920 obtained from the Admiralty the services of Rear Admiral Mawby as Director, R.I.M., to draw up a scheme of reorganisation within limited limits His scheme, however, was not adopted and Admiral Mawby resigned his appointment

The R.I.M. then fell upon hard times, money was scarce, the report of the Incheape Committee necessitated drastic retrenchments, and the working of the Montagu-Chelmsford reforms resulted in the Local Governments having to defray the cost of the work of R.I.M. ships on their various stations on lighthouse duties, transport work carrying of officials etc The Local Governments were naturally inclined to think that if they had to pay they would like to have a say in the management and that if the work could be done cheaper locally they should arrange to carry out the duties themselves. Further the Incheape Committee recommended that the three large troopships should be scrapped and all troopship carried out under contract, which would have left the Marine with only the Survey Department and the Bombay Dockyard

A Combatant Service.—Happily for the Service however, the Government of India in 1922, appointed a Departmental Committee

under the Chairmanship of General Lord Bawlinson in his capacity of Minister of Defence and Member of Council in charge of the Marine Portfolio to submit a scheme for the reorganisation of the Service as a combatant force. This Committee recommended that the Service should be reorganised as a purely combatant Naval Service with the title of Royal Indian Navy with a strength in the first instance of 4 armed sloops 2 patrol vessels 4 mine-sweeping trawlers, 2 surveying ships and a depot ship the Service in the first instance to be commanded by a Rear Admiral on the active list in the Royal Navy. The scheme was accepted by the Indian and Home Governments and the necessary Act to permit India to maintain a Navy was passed through both Houses of Parliament.

To effect the change in the title it was necessary to draw up a new Indian Naval Discipline Act, and this had to be passed in the Legislative Assembly and Council of State in India. The Bill was introduced in February 1928 when the Government were defeated by one vote the defeat being caused, not by the fact that the people of India did not want an Indian Navy, but because in some cases members did not consider that the Legislature had been properly and fully consulted beforehand. Other members voted against the Bill on prin-

ciple as they considered that both Army and Navy should be directly controlled by the Legislature while the extremists voted against it because they were prepared to vote against any Government Bill which might be introduced.

The blow to the Service was a heavy one as it was feared that the defeat might put an end to the reorganisation. The Government, however, decided that the reorganisation should continue on the original lines except that the title could not be altered and that the service would have to use the old Discipline Act a perfectly correct Articles of War based on the Naval Discipline Act.

In 1928 on the recommendation of the Admiralty His Majesty the King approved of the change in uniform of officers to that of the Royal Navy with the exception of the buttons of the R. I. M., which bear the Star of India as a distinctive mark and also of the flying in E. I. M. ships of the White Pennant and the White Ensign of the Royal Navy. The White Ensign was hoisted for the first time on Armistice Day November 11th 1928.

The Indian Marine is now reorganised as one of the fighting forces of the Empire under the command of a Rear Admiral on the active list of the Royal Navy. Its duties are purely naval and its personnel are trained for war.

Personnel, 1931

HEADQUARTERS STAFF

Flag Officer Commanding Royal Indian Marine and P. N. T. O., East India	Rear Admiral H. T. Walwyn O.B., D.S.O.
Naval Secretary	Paymaster Commander E. A. Tolley, R.N.
Flag Lieutenant	Lieut. F. C. Hammond, R.I.M.
<hr/>	
Chief of Staff to Flag Officer Commanding R.I.M., and Captain Supdt. R.I.M. Dockyard	Captain E. H. Daughill, R.I.M.
Commander of the Dockyard	Commander J. N. Micalfe, O.B.E., D.S.C., R.I.M.
Squadron Gunnery Officer	Lieut. Comdr. P. H. Learmont, R.I.M.
Squadron Signal Officer	Lieut. St. J. A. D. Garniss, R.I.M.
Engineer Manager of the Dockyard	Engineer Captain W. A. Williams, R.I.M.
1st Assistant to the Engineer Manager of the Dockyard.	Engineer Commander S. R. Trenoweth, R.I.M.
2nd Assistant to the Engineer Manager of the Dockyard	Engineer Lieut.-Comdr. F. Clark, R.I.M.
Marine Store Officer	Engineer Commander A. Thomson, R.I.M.
Financial Adviser to the Flag Officer Comdg R.I.M.	C. Rajagopala Aiyar, M.B.E.
Chief Superintendent to the Flag Officer Comdg R.I.M.	E. Osborne Carey

MARINE TRANSPORT STAFF

Divisional Marine Transport Officer, Bombay
Asst. Marine Transport Officer, 1st Grade

" " " " " "
" " " " 2nd "

Commander C H Boykett R.I.M.
Lieut. Comdr H F Huggs Hallett,
M.N.E., D.S.C., R.I.M. (Karachi)
Lieut. Comdr F W Angell, R.I.M.
(Bombay)
Lieut. W R Shearing, (Karachi)

CIVILIAN GAZETTED OFFICERS

Constructor W G J Francis, Esq.
Electrical Engineer R T Burke Esq.
Assistant Marine Store Officer J A B Hawes Esq.,

In addition to the above there are 21 vessels composed of minesweeping and steam trawlers service launches, target towing tugs, distributed at Bombay Calcutta, Aden and Karachi

Dockyards

There were two Royal Indian Marine Dock yards at Bombay and at Calcutta the former being the more important. The one at Calcutta has been closed. There are 5 graving docks and a wet basin at Bombay together with factories

Medical Staff

Marine Surgeon Bombay, Lieutenant Colonel A. N. Thomas, D.S.O. M.B., B.S.
Officer in Charge, Dockyard Dispensary Lieutenant J B D'Souza, M.D.

R I M Warrant Officers

Boatswain of the Dockyard Boatswain W J Downing R.I.M.

Warrant Master-at-Arms, Dockyard Police Boatswain C Mahon R.I.M.

Asst. Warrant Master-at-Arms, Dockyard Police, Boatswain A H Lovett, M.B., B.S. R.I.M.

Police Boatswain, Boatswain Muhammad, Mohidin, R.I.M.

Boatswain, Sk. Kaka Jalno R.I.M.

Appointments

In addition to the regular appointments in the ships of the Royal Indian Marine, and in the R. I. M. Dockyard, the following appointments under the Government of India, Commerce Department are held by the officers of the Royal Indian Marine —

BOMBAY

Principal Officer, Mercantile Marine Department, Bombay District, Nautical Surveyor, Mercantile Marine Department, Bombay District, Principal Engineer and Ship Surveyor 2nd, 3rd and 4th Engineers and Ship Surveyors

CALCUTTA

Principal Officer, Mercantile Marine Department, Calcutta District, Nautical Surveyor, Mercantile Marine Department Calcutta District, Principal Engineer and Ship Surveyor, 2nd, 3rd, 4th and 5th Engineers and Ship Surveyors

MADRAS

Principal Officer, Mercantile Marine Department Madras District and Engineer and Ship Surveyor

BURMA

Principal Officer, Mercantile Marine Department Rangoon District, Nautical Surveyor, Mercantile Marine Department Rangoon District, and Engineer and Ship Surveyor Rangoon

KARACHI

Principal Officer, Mercantile Marine Department, Karachi District

ADEN

Principal Officer, Mercantile Marine Department, Aden District

CHITTAGONG

Nautical Surveyor and Engineer and Ship Surveyor

PORT BLAIR.

Engineer and Harbour Master.

Agriculture.

As crops depend on the existence of plant food and moisture in the soil, so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months, and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. Between early June and October abundant rains fall over the greater part of the continent while the winter months are generally dry, although North-Western India benefits from showers in December and January. The south of the Peninsula and especially the Madras Presidency however is more truly tropical especially in the south, and depends mainly on the N.E. monsoon here the two crop seasons can hardly be said to exist. The distribution of the rainfall throughout the year which is of considerable importance to agriculture is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year, viz. mid-summer, and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. Heavy rainfall concentrated in a limited period, though it has its drawbacks and demands a special system of agriculture, has many advantages in hot countries.

Soils.—Four main soil types can be recognised in India viz. (1) the Red soils derived from rocks of the Archaean system which characterise Madras, Mysore and the South East of Bombay and extend through the East of Hyderabad and the Central Provinces to Orissa, Chota Nagpur and the South of Bengal. (2) The black cotton or *regur* soils which overlie the Deccan trap and cover the greater part of Bombay, Berar and the Western parts of the Central Provinces and Hyderabad with extensions into Central India and Bundelkhand. The Madras *regur* soils though less typical are also important. (3) The great alluvial plains agriculturally the most important tract in India as well as the most extensive mainly the Indo-Gangetic Plain embracing Sind northern Rajputana, most of the Punjab the plains of the United Provinces, most of Bihar and Bengal and half of Assam. (4) The laterite soils which form a belt round the Peninsula and extend through East Bengal into Assam and Burmah.

The great alluvial plains are characterised by ease of cultivation and rapid response to irrigation and manuring broadly speaking there are few soils in the world more suited to intensive agriculture so long as the water supply is

assured. The other soils are less tractable and call for greater skill in management and are less adapted to small holdings, of these the *regur* soils are the most valuable.

Agricultural Capital and Equipment.—India is a country of small holdings and the commonest type is that which can be cultivated with one pair of bullocks under local conditions. Large holdings are practically unknown and are mainly confined to the planting industries. Farming is carried on with a minimum of capital, there being practically no outlay on fencing buildings or implements. Many causes militate against the accumulation of capital and agricultural indebtedness is heavy and the interest on loans high. Great progress has been made by the co-operative credit movement during the last twenty years. There are now 73,000 Agricultural Credit Societies in British India with some 2,400,000 members and a working capital exceeding 2½ crores of rupees. Not only have these societies brought cheaper credit to the cultivator but they have striven to inculcate the lesson that cheap credit is only valuable if applied to productive purposes and have encouraged thrift.

Equipment.—Practically all cultivation is done by bullocks and the capacity of these as draught animals varies from district to district as well as depending on the cultivator's individual circumstances. The best types in common use are capable of handling what would be considered as light single horse implements in Europe. In those tracts where irrigation is from wells bullocks are also used for drawing water they also drive the sugarcane crusher and tread out the grain at harvest. His implements being few, a cultivator's bullocks form by far the most important item of his movable property.

Implements are made of wood although ploughs are usually tipped with iron points, and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years and many hundred thousands are now in use. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller, and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

On black cotton soils the commonest implement is the *bahhar* a simple form of broad shape plough. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various sorts of hoes the best known of which are the *kodai* or spade with a blade set at an angle towards the labourer who does not use his feet in digging and the *khurpi* or small hand hoe. Of harvesting machinery there is none grain is separated either by treading out with oxen or beating out by hand and winnowing by the agency of the wind. Simple reapers and winnowers are slowly coming into use in the wheat tracts. The larger iron ploughs are now a familiar sight in certain black soil areas and the use of other improved implements is growing. Even motor tractor ploughs are now estimated to number hundreds and a few steam ploughing sets are at work reclaiming land from deep-rooted grasses.

Cultivation.—Cultivation as its best is distinctly good but in the greater part of the country there is plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people, depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Two economic factors tend to keep down the standard of cultivation. Holdings are not only small but fragmented and the Indian laws of inheritance both perpetuate and intensify this evil. Very definite attempts are now being made in several provinces and states to amend matters and consolidate holdings but the process is necessarily slow. Secondly, cultivators rarely live on or near to their holdings but congregate in villages. The need for mutual protection is less than formerly and though tradition dies hard sub-villages are now springing up in many places. For *Rabi* crops which demand a fine seed bed preparatory tillage consists mainly of repeated treatments with the indigenous plough (or on black soils the *hakker*) which serves the purpose of plough, harrow and cultivator combined with applications of the levelling beam. Crude as these implements are they produce in Northern India a surface mulch and moist sub-soil which is the aim of all dry farming operations. For *Kharif* crops the preparation is much less thorough as it is essential to sow without delay. Inter-culture is usually inadequate. Manure is generally applied to more valuable crops like sugarcane, cotton, tobacco, etc. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and inter-cultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole and there is little waste involved. At their best the ryot's methods are not ineffective but being uneconomical of both cattle and man power, they are seldom carried out fully. The use of simple improved implements and of machines which lessen the strain on the bullocks which the agricultural department is steadily fostering is an important factor in raising the general standard of agriculture.

Irrigation.—The concentration of the principal rainfall in less than a third of the year which is not the sowing period of the *rabi* crops, places a very definite limit of the yield which can be obtained from the principal cereal crops. Some other crops, e.g., sugarcane, can hardly be grown indeed without supplementary watering. With adequate irrigation the yield from the principal grain crops in Northern India is doubled even in areas where the monsoon is generous, whilst in the great canal colonies barren desert has become fertile land. The Indian canal system is by far the largest in the world and already irrigates 91 million acres of crops annually. The area will be increased shortly to 97 million acres when works under construction are completed and when the various new canals are developed fully will probably reach 10 million acres. The protective effect of the canals in many areas is no less important than the enhanced yield. Protective irrigation works have made agriculture stable

instead of precarious in many districts. The Indian canals are of two types—perennial and inundation—and the trend of irrigation practice is to replace the latter by the former wherever possible. The great perennial canals in the North of India draw their supply from snow-fed rivers; the inundation canals run only when the rivers rise with the melting of the snow in April May and must close when supplies fall at the end of the monsoon. Other canals depend for their supply during the dry part of the year on water stored behind great dams thrown across suitable gorges and are in consequence less dependable than the larger snow-fed systems. Water rates are levied on the area of irrigated crops matured so that Government bears part of the risk of failure of crops. Different rates are charged for different crops and vary some what in different parts of India; rates are also lower when the water has to be lifted than when flow irrigation is given.

At the present time the Bombay Presidency possesses the most spectacular irrigation schemes in India—if not in the world. The Lloyd Dam at Dhatgar 190 feet high will have the greatest cubical contents of any masonry wall in the world. The Wilson Dam at Bhandardara, impounding 272 feet of water is far and away the highest dam in India, whilst the Sukkur Barrage in Sind across the Indus will irrigate a desert whose area far exceeds that of any other scheme conceived by engineers.

Irrigation from Wells.—About one quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has however greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

All Agricultural departments are now giving increased attention to the better utilisation of underground water supplies existing wells being improved by boring and tube wells of large capacity installed and equipped with pumping machinery.

Tank Irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. Often the indirect effect of the tank in maintaining the sub-soil water level is as important as the direct irrigation.

Manures.—Although the number of cattle maintained in India is very high and indeed excessive there is everywhere a shortage of farmyard manure. This is partly due to the small use of bedding for which straw can ill be spared and to the keeping of cattle in the open, but mainly to the use of dung as the principal source of village fuel. Hence the supply of organic matter to Indian soils is deficient. Unfortunately the Indian cultivator does not possess the skill of the Chinaman in the making of composts and much valuable manurial material is wasted in every Indian village and to the detriment of sanitation. Green manure crops are spreading slowly and the use of oil-cakes, especially castor-cake, for the more valuable crops like sugarcane and tobacco is increasing.

The general trend of the results of experiments carried on by the various agricultural departments is to show that a better supply of organic manures is everywhere important, nitrogen is the most common limiting factor for India as a whole phosphatic manures are definitely advantageous in certain more limited tracts. Manuring for higher production is gradually spreading as the result of village demonstrations at present prices of certain artificial fertilisers, notably ammonium sulphate and the newer types of soluble phosphatic manure are definitely profitable not only for tobacco, sugarcane and market garden crops but for some staple crops especially rice superphosphate and nitrate of soda are being more widely used in certain areas.

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, viz. in Bengal Bihar and Orissa, Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in quality and in suitability for various conditions of soil and climate and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon. Broadleaved rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rice grows quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a paddy before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Either by bunding to retain rainfall or by artificial irrigation the details varying with locality, the rice fields are kept more or less under water until the crop shows signs of ripening. The area under improved varieties of rice distributed by the agricultural departments now exceeds 1,000,000 acres.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop. The United Provinces and the Punjab supplying about two thirds of the total area, and probably three-quarters of the total output in India. The majority of the varieties grown belong to the species *Triticum vulgare*. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. As seen in local markets Indian wheats frequently contain appreciable quantities of other grains and even of extraneous matter due to the method of threshing employed. Wheat for export is well-cleaned and there has been great improvement in this respect of recent years. Most of the Indian wheats are soft weak wheats but there are some well known Macaroni wheats amongst them. Indian wheat at present meets a special de-

mand on the London market being available when other stocks of soft wheats are low. Strong wheats of high milling quality are grown on a considerable scale in Northern India as the result of the work of the Agricultural Departments but are mainly retained for local consumption. Exports of wheat during the last 80 years have varied from zero to over 2 million tons, most of the annual production of some 10 million tons is always consumed in the country. Indeed each rise in exports has been simultaneous with the opening up of a new canal colony. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon. Sains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of low yield the local price is sufficiently high to restrict exports. The total area under improved varieties of wheat is now reported to exceed 4 millions of acres.

The Millets.—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) the great millet, and Bajra the Bulrush millet (*Pennisetum typhoides*). Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied though Jowar responds handsomely to high manuring and cultivation is not so thorough as for wheat. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. It is often grown mixed with the summer pulses especially Arhar (*Cajanus indicus*—pigeon pea) and other crops. The subsidiary crops are harvested at intervals after the millet is harvested, and afterwards in some provinces ragi is also an important crop. The produce is consumed in the country.

Pulses.—Pulses are commonly grown throughout India in great variety and form at once the backbone of the agriculture, since even the present moderate degree of soil fertility could not be maintained without leguminous rotations, and a primary necessity in the food of the vast Indian population. The yields on the whole are fairly good mixed cropping is common. The principal pulses are Arhar (*Cajanus indicus*), gram (*Cicer arietinum*), various species of *Phaseolus* and *Pisum*. Reference should be made to Groundnuts which though of modern introduction now forms an important leguminous oil-seed crop in Madras and Bombay, and to a less extent in other provinces and an important article of export.

Cotton—Cotton is one of the most important commercial and export crops of India covering now some 28 million acres annually with a production of 5½ to 6 million bales of 400 lbs. Some two million bales are consumed annually in Indian mills the rest being exported to Japan (China and the Continent of Europe. Some 3½ of the average annual production consists of short-staple cotton of ½" to ¾" staple mainly ranging round ½". The remainder is medium staple cotton ranging from ¾" to 1½". The latter qualities are in keen demand for Indian mills Punjab-American and Madras Tinnevely and Karungundi being the principal long-staple cottons exported. There is no Indian cotton belt Bombay the Central Provinces, Hyderabad Baroda, Madras, the Punjab and the United Provinces all have important cotton tracts producing distinct types. Sowing and harvesting seasons are equally diverse the former extending from May to December in different parts of the country and the latter from October to May and June. Yields vary greatly in the best irrigated tracts the normal yield is about 200 lbs of ginned cotton per acre and yields much above these have been recorded whilst in the poorest unirrigated tracts 80 lbs per acre is a good crop. Of recent years, as the result of the work of the Agricultural Departments and the Indian Central Cotton Committee the quality and yield of the staple cottons has improved and also the yield and cleanliness of the short-staple tracts.

The Cotton Transport Act, the Cotton Ginning and Pressing Factories Act and the Bombay Cotton Markets Act have all been passed at the instance of the Committee and are doing much to check the abuse of adulteration and promote better marketing. Agricultural Departments have continued their campaign of cotton improvement and, apart from improvements in methods of cultivation improved varieties of cotton now covers over 4 million acres.

Exports—The exports of raw cotton from India by sea to foreign countries for the last 5 fiscal years (ending March 31st) were as follows in thousands of bales of 400 lbs each) —

Countries	1925-26	1926-27	1927-28	1928-29	1929-30
United Kingdom	225	87	160	241	270
Other parts of the British Empire	16	6	7	7	5
Japan	2,064	1,842	1,235	1,610	1,530
Italy	456	505	380	384	398
France	193	123	185	204	233
China (exclusive of Hong Kong, etc)	538	391	112	404	566
Belgium	243	159	230	347	341
Spain	73	54	61	76	80
Germany	218	145	256	324	344
Other countries	127	96	110	115	179

Total exports from the six principal ports (Bombay, Karachi, Madras, Tuticorin, Calcutta and Rangoon) for the cotton season ending August 31st, 1930 totalled 3,959,849 bales as compared with 3,971,440 bales in 1929-30.

Sugarcane—India, though a large importer of sugar is nevertheless one of the most important sugarcane growing countries in the world the area under the crop being above 3 million acres. The crop is mainly grown in the sub-montane tracts of Northern India. The common varieties are thin and hard yielding a low percentage of juice of fair quality, but these are now being rapidly replaced by seedling canes of high merit compared to those of other sugarcane-growing countries. The area under such improved varieties in Northern India has already reached about 700,000 acres and is rapidly extending. By change of variety alone an increase of 50 per cent in the yield per acre is attained by using improved cultural methods also the yield in many cases is trebled. The greater part of the Indian sugarcane crop is converted into gur in which form it is consumed. A considerable amount of crystallised sugar is still made by the old indigenous process and modern factories in the year 1928-29 produced 99,000 tons, the net imports of sugar in 1929-30 averaged 239,000 tons mainly from Java. The Coimbatore cane breeding station has produced seedling canes of high merit both in regard to tonnage and quality. These are rapidly spreading in the principal portions of the sugarcane belt and improved methods of cultivation are being adopted. The agricultural side of the problem is practically solved though continuous effort is necessary. Certain well-equipped factories are obtaining a recovery of sugar on cane which compares very favourably with that in other countries. In some portions of the sugarcane belt cane of good quality can be produced as cheaply as in any country in the world. There is no reason why India should not be self-supporting in sugarcane products once the industry is properly organised and the question of protection for the Indian sugar industry was referred to the Tariff Board by the Government of India and its report was published in 1931.

Oilseeds—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield varies greatly from practically nothing up to 500 or 600 lbs of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum or (Glugelly) is grown mostly in Peninsular India as an autumn or winter crop. About 10 per cent of the production is exported and the rest consumed locally.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state

of development. They are one of the most useful crops in the rotation. They occupy the land for a few months only and owing to their dense growth leave the soil clean and in good condition after their removal. A number of varieties are grown differing from each other in habit of growth, time of ripening, and size and quality of seed. The best known are rape, toria, and sarson. The crop is generally sown in September or early October and harvested from December to February. The crop is subject to the attack of aphids (green fly) at the time of flowering and sometimes suffers considerable damage from this pest. The seed is subject to injury from rain and great care has to be taken in the drying. Though the export of rape and mustard seed exceed a million tons annually, exports represent less than one fifth of the crop the bulk of which is crushed locally, both the cake and the oil are needed for local consumption.

Jute—Two varieties of the plant are cultivated as a crop, *Capularia* and *Olliorius*. Jute growing is confined almost entirely to Bengal, Assam, Bihar and Orissa. The crop requires a rich moist soil. Owing to river inundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once established requires no attention, and grows to a great height (10 to 11 feet). Before ripening the crop is cut and retted in water. After about three weeks submersion the fibre is removed by washing and beating. The production of jute in 1930 was 11½ million bales on an area estimated at 2½ million acres. The area under improved varieties was about 1½ million acres. The world depression in trade has led to a fall in demand and slump in prices and a considerable reduction in jute production may be expected.

Tobacco is grown here and there all over the country chiefly, however, in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated *Nicotiana glauca* is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. The greater part of the tobacco grown in India is intended for *hookah* smoking and is coarse and heavy in flavour. Lighter kinds are also produced for cigar and cigarette manufacture of recent years there has been important development in the production, in

commercial quantities, of better quality cigarette tobacco both in Madras and in Bihar. The flue cured tobacco from the new Fusa hybrids yields very satisfactory results and as these new strains come into general cultivation a further advance will be possible.

Livestock—The livestock population of British India consists mainly of about 130 million cattle, 21 million buffaloes, 23 million sheep, 39 million goats and 3 million horses, mules and donkeys and half-a-million camels and in the 51 Indian States for which figures are available, there are 36 million cattle and buffaloes, 25 million sheep and goats, a million horses, donkeys and mules and quarter-of-a-million camels. For draught purposes cattle are mainly used everywhere though male buffalo are important as draught animals in the rice tracts and damper parts of the country. Horses and mules are practically never used for agricultural purposes. For dairy purposes, the buffalo is important the milk yield being high and the percentage of butter fat considerably above that in cow's milk. The best known breed is the Murra buffalo of the Punjab. The cattle and buffalo population in India is abnormally high amounting to over 60 per cent. of the human population. The spread of cultivation has diminished the grazing grounds insufficient fodder crops are raised and many of the cattle are small, ill fed and inefficient. Nevertheless the best Indian breeds have many merits. Of draught types, the best known breeds are the Hissar, Nellore, Anand-mahal, Gujrat (Kankrej), Kharigarh and Malvi, the Sauriwal (Punjab), Gir (Kathiawar) Sindhi and Hansi are amongst the best milking breeds. On the Government cattle breeding farms pedigree herds are being built up and from these selected bulls are issued, preference being given to special breeding areas, to villages which undertake to exclude scrub bulls and where serious efforts to maintain a good strain of cow are made. Once established such breeding areas rapidly produce a supply of superior bulls for general distribution and in this way the valuable bulls from Government herds are used to advantage. The premium bull system is also working well in some tracts. Cattle improvement is a slow process at the best and though a start on sound lines has been made in all provinces, continued efforts and persistent endeavour is essential. There is no branch of agricultural improvement where the landowners of India could render greater service.

Dairying—Though little noticed, dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghee) and cheese (dahi). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure ghee and milk can be procured in the villages, in the towns dairy products can scarcely be bought unadulterated. The Government of India have opened an up-to-date Creamery and Butter Factory at Anand and an Institute of Animal Husbandry and Dairying at Bangalore where students are given courses for the Indian Dairy Diploma.

AGRICULTURAL PROGRESS

Agricultural Progress—The historical aspect of agricultural development in India has recently been fully dealt with in the report of the Lallithgou Commission. The Famine Commission as long ago as 1866 made the first proposal for a separate Department of Agriculture but little resulted except the collection of agricultural statistics and other data with the object of throwing light on famine problems. The Famine Commission of 1880 by their masterly review of the possibilities of agricultural development revived interest in the matter and their proposal for a new Department for Agriculture and allied subjects in the Government of India and for provincial departments of agriculture bore fruit eventually. Dr J. A. Yoelker (Consulting Chemist to the Royal Agricultural Society) was invited to visit India and his book *Improvement of Indian Agriculture* is still a valuable reference book. In 1892 an agricultural chemist to the Government of India was appointed. Provincial Departments mainly concerned themselves at first with agricultural statistics but experimental farms were opened at Saidapet in 1871, Poona in 1880, Cawnpore in 1881 and Nagpur in 1883, there were various sporadic attempts at agricultural improvement but no real beginning was made until technical agricultural officers were appointed. Of these the earliest were Molison in Bombay (subsequently Inspector General of Agriculture), Barber and Benson in Madras, Hayman in the United Provinces and Milligan in the Punjab. In 1901 the first Inspector General of Agriculture was appointed and in the same year an Imperial Mycologist was added followed by an Imperial Entomologist in 1903. The present departments of agriculture however owe their existence to the foresight and energy of Lord Curzon whose famous despatch of 1903 marked the commencement of the reorganisation which took place in 1905. That scheme provided for a central research institute at Pusa, completely staffed provincial departments of agriculture with agricultural colleges and provincial research institutes and an experimental farm in each important agricultural tract. To the establishment of the Imperial Agricultural Research Institute at Pusa Lord Curzon devoted the greater part of a generous donation of £30,000 given by Mr Henry Phipps of Chicago to be applied to some object of public utility preferably connected with scientific research. The Indian Agricultural Service was constituted in 1906. Since that date progress has been steady and continuous. With the advent of the reforms of 1919 agriculture became a provincial transferred subject but the Government of India retained responsibility for central research institutions and for certain matters connected with the diseases and pests of plants and animals. The addition of the Imperial Institute of Animal Husbandry and Dairying (with a branch farm at Wellington), the Imperial Cattlebreeding Farm at Karnal and the Anand Creamery enabled livestock work to be carried out on a scale not possible at Pusa. The Imperial Sugarcane-breeding station at Coimbatore is yet another branch of the Imperial Agricultural Research Institute. Provincial Governments have steadily developed and strengthened their agricultural departments. The total net ex-

penditure of provincial agricultural departments now exceeds 105 lakhs rupees annually the net annual expenditure on the Imperial Department of Agriculture is in the neighbourhood of 11 lakhs.

Parallel developments took place in the provision made for matters connected with animal health. The now world famous Imperial Institute of Veterinary Research at Muktesar started in 1893 as a modest hill laboratory for research on rinderpest. It is now a fully equipped research institute which also manufactures protective sera and vaccines of which some 8 million doses are issued annually. The Civil Veterinary Department was formed in 1891 and until 1912 was under the control of the Inspector General. The departments were completely provincialised in 1919. The Government of India continues to finance and control the Muktesar Research Institute and its branch station at Izatnagar (Barilly).

Recent Progress—As now constituted the Agricultural Departments include a complete organisation for bringing the results of the application of science to agriculture into the village. At one end of the scale are the agricultural colleges and research institutes—at the other thousands of village demonstration plots where the issue of improved seed methods implements and manures is shown under the cultivators own conditions. Intermediate links in the chain are the experimental farms, where scientific research is translated into field practice demonstration and seed farms and seed stores. The ascertained results of the work of the agricultural department are striking enough. More than 12 million acres are known to be under improved crops—the further area due to natural spread is indeterminate. Twenty-seven thousand improved ploughs were sold through Agriculture Departments in 1924-25 and sales through private agencies were still greater. Improved methods of cultivation and manuring are steadily spreading work is in progress on most of the major crops and each year brings new triumphs. The present position has been authoritatively reviewed by the Royal Commission on Agriculture which reported in 1928. Recognising how much has already been done in the 20 years since the agricultural departments were created the Commission also emphasised the enormous field for future work to which all witnesses had drawn their attention. The agricultural departments having shown that the application of science to Indian agriculture is a practical proposition and further that the individual cultivator can be reached and his methods improved the problem is now to develop and intensify such work so that a general advance in agricultural practice will result. The many far reaching proposals of the Commission are still under the consideration of Local Governments but many have already been acted upon. At no time has there been a greater need for co-ordinated effort directed towards the solution of agricultural problems. Only by increased efficiency in production can India meet the situation caused by low prices for all agricultural commodities and the intense competition in world markets arising from production in excess of effective demand.

GOVERNING BODY

Member of the Council of His Excellency the Governor General in the Department of Education, Health and Lands (Chairman)	(The Honble. Khan Bahadur Mian Sir Fazil Hussain K C I E Kt Barrister-at Law)
Principal Administrative Officer (Vice Chairman)	(Dewan Bahadur Sir T. Vijayaraghavachari K B E)
Minister for Agriculture, Madras	(The Honble Mr P. J. Rajan)
Minister for Agriculture, Bombay	(The Honble Rao Bahadur S. T. Kambh, B.A. J I B)
Minister in charge of Portfolio of Agriculture, Jaipur	(The Honble Khan Bahadur Maulvi Fazl Gohar Mohiuddin Ismail)
Minister for Agriculture, United Provinces	(The Honble Mahraj Kumar Major Mahipal Singh)
Minister for Agriculture, Punjab	(The Honble Sardar Sir Jogendra Singh Kt)
Minister for Agriculture, Burma	(The Honble Sir Lee Ah Yain, Kt)
Minister for Agriculture, Bihar and Orissa	(The Honble Sir Sayid Mohammad Fakhruddin, Khan Bahadur, Kt)
Minister for Agriculture, Central Provinces and Bihar	(The Honble Dr P. B. Dasgupta)
Minister for Agriculture, Assam	(The Honble Maulavi Abdul Hamid, B L)
Representative of the Council of State	Vacant
Representatives of the Legislative Assembly	Vacant
	Vacant
Representative of the Associated Chambers of Commerce of India and Ceylon	(Sir Joseph Kay Kt)
Representative of the Federation of Indian Chambers of Commerce and Industry	(Walchand Hirchandani, Esq.)
Nominated by the Advisory Board	(K. Hewitt Esq., O B E and P. K. Carpenter Esq.)
Revenue Minister of H. E. H. the Nizam's Executive Council	(Lt Col. Sir Chevenix Trench, Kt., C I I O B E)
Additional Member nominated by the Governor General in Council	(Sir Frank Noyce Kt, C S I, C B E, I C S)

THE ADVISORY BOARD

Vice Chairman of the Society	(Dewan Bahadur Sir T. Vijayaraghavacharya, K B E)
Agricultural Expert	(Mr B. C. Burt C I E M B E, B Sc, I A S)
Animal Husbandry Expert	(Col. A. Oliver C B C M G F R C V S)
Director, Imperial Institute of Agricultural Research	(Dr B. A. Keen, D Sc., F Inst P)
Director, Imperial Institute of Veterinary Research, Muktesar	(F. Ware Esq., F R C V S, I V S Offg on leave) (W. Taylor Esq., M R O V S I V S Offg)
Director, Indian Institute of Science	(Dr M. O. Forster, F R S)
Director of Agriculture, Madras	(G. R. Hillson, Esq. B Sc Offg)
Director of Agriculture, Bombay	(T. F. Main, Esq. O B E, I A S)

THE IMPERIAL COUNCIL OF AGRICULTURAL RESEARCH.

In Chapter III of their Report, the Royal Commission on Agriculture stated that the most important problem with which they had been confronted was that of devising some method of infusing a different spirit into the whole organisation of agricultural research in India and of bringing about the realisation on the part of research workers in this country that they are working to an end which cannot be reached unless they regard themselves as partners in a common enterprise. They had found not only a lack of sufficiently close touch between the Pusa Research Institute and the provincial agricultural departments but also between the provincial departments themselves. After describing the way in which similar difficulties had been overcome in Canada, the United States and Australia and dismissing as inadequate the constitution of crop committees on the model of the Indian Central Cotton Committee or the constitution of a quasi independent governing body for Pusa on which the provincial agricultural departments and non-official interests would be represented, the Commission proposed the establishment of an Imperial Council of Agricultural Research.

The primary function of the Council would be to promote guide and co-ordinate agricultural including veterinary, research in India and to link it with agricultural research in other parts of the British Empire and in foreign countries. It would make arrangements for the training of research workers, would act as a clearing house of information in regard not only to research but also to agricultural and veterinary matters generally and would take over the publication work at present carried out by the Imperial Agricultural Department. The Commission proposed that the Council should be entrusted with the administration of a non-lapsing fund of Rs. 50 lakhs to which additions should be made from time to time as financial conditions permit. Its Chairman should be an experienced administrator with a knowledge if possible, of Indian conditions and in addition, there should be two other whole-time members of the Council for agriculture and animal husbandry respectively. The Commission suggested that the Council should consist of thirty-six members in addition to the Chairman and the two whole time members. Of these, eight would be nominated by the Government of India, eighteen would represent the provincial, agricultural and veterinary departments, three would represent the Indian Universities, two would represent the Indian Central Cotton Committee and the planting community respectively and five would be nominated by the Council for the approval of the Government of India. The Council would largely work through a Standing Finance Committee and sub-committees. A provincial committee should be established in each major province to work in close co-operation with it. The advisory duties of the Agricultural Adviser to the Government of India would be taken over by the Chairman and whole-time members of the Research Council his administrative duties being taken over by a whole time Director of the Pusa Institute,

Constitution of the Council.—In a Resolution issued on May 28rd, 1929 the Government of India stated that whilst they were of opinion that the proposals of the Royal Commission were, on the whole, admirably designed to secure the objects for the attainment of which the establishment of the organisation outlined above was recommended, they considered a Council of thirty nine members would be too large to be really effective and that it was not desirable that the Legislative Assembly should be deprived of its normal constitutional control over an activity which affects the staple industry of India. They had therefore decided that the central organisation should be divided into two parts, a Governing Body which would have the management of all the affairs and funds of the Council subject to the limitation in regard to the control of funds which is mentioned below and an Advisory Board the functions of which would be to examine all proposals in connection with the scientific objects of the Council which might be submitted to the Governing Body, to report on their feasibility and to advise on any other questions referred to it by the Governing Body. The Governing Body would consist of the Member of the Governor General's Council in charge of the portfolio of Agriculture who would be *ex-officio* Chairman, the Principal Administrative Officer of the Council, who would be *ex-officio* Vice-Chairman, one representative of the Council of State, two representatives of the Legislative Assembly, one representative of the European business community elected by the Associated Chambers of Commerce of India and Ceylon one representative of the Indian business community elected by the Federation of Indian Chambers of Commerce and Industry the nine Provincial Ministers of Agriculture two representatives elected by the Advisory Board and such other persons as the Governor General in Council might from time to time appoint.

The Advisory Board would consist of all those whose inclusion in the Council was recommended by the Royal Commission with the exception of the representatives of the Central Legislature and the representatives of the European and Indian commercial communities who, under the modified scheme would be members of the Governing Body. In view of their exclusion from the Advisory Board, the university representation would be increased from three to four and the scientific representation by the addition of the Director of the Indian Institute of Science, Bangalore a representative of the Forest Research Institute, Dehra Dun and a representative elected by the Indian Research Fund Association. A representative of the Co-operative Movement would also be added. The Principal Administrative Officer to the Council would be *ex-officio* Chairman of the Advisory Board.

The Government of India further announced that for the lump grant of Rs. 50 lakhs recommended by the Royal Commission, they had decided to substitute an initial lump grant of Rs. 25 lakhs, of which Rs. 15 lakhs would be paid in 1929-30 supplemented by a fixed

minimum grant annually. The annual grant would be Rs. 7.25 lakhs of which Rs. 5 lakhs would be devoted to the furtherance of the scientific objects of the Council and the remaining Rs. 2.25 lakhs to the cost of its staff and secretariat. The Council would have an entirely free hand in regard to the expenditure of the grants made to it for scientific purposes subject to the condition that no liability in respect of such matters as leave or pension contributions after the research for which the grant had been given would be incurred. In regard to the grant to meet the cost of staff establishment etc. the Council would be in the same position as a Department of the Government of India Secretariat.

The Council has since been constituted a separate Department of the Government of India for the purpose of administering this grant.

The Government of India also stated their decision that the Council should not be constituted under an Act of the Imperial Legislature as recommended by the Royal Commission but should be registered under the Registration of Societies Act, XXI of 1900. In pursuance of this decision a meeting of those who would constitute the Society was held at Simla in June 1929 to consider the terms of a memorandum of association and the Rules and Regulations. At that meeting it was announced that His Exalted Highness the Nizam's Government had offered a donation of Rs. 2 lakhs to the funds of the Council. This offer was gratefully accepted and the Revenue Member of the Nizam's Government has been added to the Governing Body. The Directors of Agriculture and of Veterinary Services becoming members of the Advisory Board. The three last named members vacated their seats owing to the dissolution of the Council of State and the League Assembly and their places will be filled up by the election of new members.

Other additions have since been made to the Advisory Board and the present constitution of the Council is now as shown below —

The Vice Chairman of the Council is Sir T. Vijayaraghavacharya KBE late member of the Public Service Commission. The Agricultural Expert is Mr. B. C. Burt OBE MBE late Director of Agriculture Bihar and Orissa and the Animal Husbandry Expert Col. A. Oliver CMG FRCVS. The Secretary to the Council is Mr. M. S. A. Hydrari ICS (Madras).

Work of the Council.—The first important step taken by the Council after its formal constitution was the appointment of a Committee to examine and report on the measures to be taken for strengthening and developing the sugar industry. This Committee has presented an *interim* report, which was considered at the first meeting of the Council which was held at Poona from the 2nd to the 7th December 1929. The Governing Body then decided that the Government of India should be asked to refer the general question of the import duties on sugar for investigation by the Indian Tariff Board and to take immediate action for the conversion of the present *ad valorem* duty on lower trade sugar into a

specific duty in order to prevent unfair competition with Indian gur. The first of these recommendations has been accepted by the Government of India and an investigation by the Tariff Board is now in progress. Other decisions on this subject were that Rs. 8,000 should be granted to the United Provinces, Bihar and Orissa and the Punjab for experiments, in devising satisfactory small power sugarcane crushing mill, that a prize of Rs. 20,000 should be awarded to any individual or firm for the invention of a satisfactory small power sugarcane crushing power mill and that the appointment of a Technologist should be sanctioned.

On the recommendation of the Advisory Board a special sub-committee of that Board was constituted to investigate the measures required to deal with the locust problem. Another sub-committee was appointed to investigate the problems relating to the conservation of indigenous manual resources and the development of the use of indigenous fertilisers and the preparation of a programme of research on fertilisers. The Governing Body accepted a Resolution of the Advisory Board that a whole time officer should be employed to study and report on the conditions under which hemp is marketed in the Provinces concerned. It was decided to recommend to the Government of India that the Board of Agriculture a meeting of which was held at Poona after the meeting of the Imperial Council of Agricultural Research, should be known in future as the Board of Agriculture and Animal Husbandry, that it should be convened under the auspices of the Imperial Council of Agricultural Research and that it should be divided into two branches (a) crops and soils and (b) animal health and husbandry each branch meeting biennially. This recommendation has been accepted by the Government of India and the Board of Agriculture has been reconstituted accordingly. A grant of Rs. 45,000 to Dr. K. C. Mehta Professor of Botany Agricultural College for an investigation into Rusts of wheat and barley was sanctioned and it was also decided that two Indians should be selected and sent at once to England for training in cinema production at the expense of the Empire Marketing Board provided the men selected agreed to serve the Council for a period of three years after their return to India.

The first business at the second meeting of the Governing Body which was held at Simla on July 29th and 30th, 1930 was to lay down the principles which should govern the grants made by the Council. It was decided that schemes sanctioned by the Council should be of all India importance, that ordinarily the land and buildings required for them should be provided by the Government or Governments concerned, the Council making a grant for equipment and staff alone, that ordinarily the Government or Governments interested should bear a part of the recurring expenditure involved, that assistance should normally be limited in the first instance to five years and that a scheme other than one submitted by the Government of India or a local Government should normally have the support of the Government of the Province from which it emanates. On the *agricultural side* schemes for the establishment

at Karnal of a sub-station of the Coimbatore Imperial Sugarcane Station, for the establishment of a sugarcane research station in Bihar and the appointment to it of a sugarcane specialist and for the appointment to the Imperial Institute of Agricultural Research at Pusa of a Mycologist for work on mosaic and other cane diseases were sanctioned. Important schemes for rice research in Assam, Bengal, Bihar and Madras were considered and accepted in principle but, before sanctioning detailed estimates, the Governing Body resolved to make enquiries from the Empire Marketing Board whether it would make any contribution towards the cost. Schemes for the establishment of a new branch of Agricultural Meteorology under the Indian Meteorological Department at Poona and of a sub-station of the Botanical Section of the Pusa Institute at Karnal were also accepted. Grants to Professor Parjia of Cuttack for research work on water hyacinth, to Dr J N Mukerjee of the University of Calcutta for research into the properties of colloidal soil constituents, Professor P C Mahalanobis of the University of Calcutta for statistical investigations on experimental errors in field trials and to Provincial Agricultural Departments for the collation of data on manurial experiments were sanctioned. Proposals for the award of an annual prize and of medals

for improvements in agriculture and animal husbandry generally and also for the award of a prize for a bone crusher worked by animal power and by mechanical power were accepted but the proposal that a prize of Rs 20,000 should be awarded to any individual or firm for the invention of a satisfactory, small power sugarcane crushing mill which had been sanctioned by the Governing Body at its first meeting was reconsidered and dropped. On the *Privy Council*, the Governing Body sanctioned schemes for the appointment of a protozoologist and of a special officer for the investigation of tuberculosis and John's disease among animals at the Imperial Institute of Veterinary Research, Muktesar. As regards dissemination of information the Governing Body decided that the Sugar Bureau at Pusa should be transferred to the control of the Imperial Council of Agricultural Research and it is being taken over with effect from April 1st 1931 when it will be transferred to Cawnpore and placed in charge of the Council's Sugar Technologist. The proposal of the Advisory Board that a Bureau of Agricultural Intelligence in India should be established under the Council was accepted as was one for the Extraction, Summarising and Publication of material on the research and experimental work carried out by the Imperial and Provincial Agricultural Departments in India.

* The acres of crops given in this table is for British India only but the yield includes the crop in certain Indian States also
 † Groundnut, coconut, castor and other oil seeds
 ‡ Includes yield of other tracts for which no forecast is made.

The following is a summary of the various crop forecasts relating to the season 1929-30 issued by the Department of Commercial Intelligence and Statistics, India —

Crop and Forecast	Tracts comprised in the figures and percentage of total Indian crop represented by them	Estimated Area	Per cent. of preceding year (100-figure of same date preceding year)	Estimated output	Per cent. of preceding year (100-figure of same date preceding year)
Jute*— Final	Bengal (b) Bihar and Orissa, and Assam (100 per cent. of the total jute area in India)	3,317,000	106	9 767,000 bales (a)	98
Cotton— Supplementary groundnut— Final	All cotton-growing tracts	25,692 000	95	5,260 000 bales	91
Sugarcane— Final	Madras, Bombay † Burma and Hyderabad (about 93 per cent. of total groundnut area of India)	5,643,000	89	2 475 000 tons	77
Sugarcane— Final	U P † Punjab, Bihar and Orissa, Bengal, Madras, Bombay † N W P Province Assam † P and Berar Delhi Hyderabad, Mysore and Baroda (a little over 96 per cent. of total sugarcane area of India)	2,504 000	(c) 96	2,766 000 tons	(c) 101
Sesamum— Supplementary	Burma, United Provinces, Madras, Bombay †, C P and Berar, Bihar and Orissa, Bengal Punjab Ajmer-Merwara, Hyderabad, Baroda and Kotaht (a little over 89 per cent. of total sesamum area of India)	5 318 000	96	460,000 tons	13
Indigo— Final	Madras Punjab, Bihar and Orissa, United Provinces, and Bombay, (including Sind) † (89 per cent. of total indigo area of India)	67,300	94	14,000 cwts	111
Rice— Final	Bengal, Bihar and Orissa, Burma, Madras, United Provinces, C P and Berar, Assam, Bombay, Coorg, Hyderabad Mysore, and Baroda (97 per cent. of total rice area of India)	79,906,000	96	30 849 000 tons	96
Rape and Mustard— Final	United Provinces, Punjab Bihar & Orissa, Bengal, Assam, Bombay, North West Frontier Province, Delhi, Alwar, Baroda and Hyderabad (about 95 per cent. of total rape and mustard area of India)	5,840 000	83	1,088,000 tons	120
Linseed— Final	Central Provinces and Berar, United Provinces, Bihar and Orissa, Bombay, Bengal, Punjab Hyderabad and Kotaht (92 per cent. of the total linseed area of India)	2,801,000	90	374 000 tons	116
Wheat— Final	Punjab, United Provinces, Central Provinces and Berar, Bombay † Bihar and Orissa, North West Frontier Province, Bengal, Delhi, Ajmer-Merwara, Central India, Gwalior, Rajputana, Hyderabad, Baroda and Mysore (a little over 98 per cent. of total wheat area of India)	81,349,000	98	10,353 000 tons	120
Castor Seed—	(Practically all castor-growing tracts)	1,251 000	89	106 000 tons	88

* Issued by the Director of Agriculture Bengal † Including Indian States. ‡ Rajputana.

(a) Includes figures for Nepal (b) Including Cochin Bihar and Tripura States

(c) Excluding Hyderabad for which information is available only from this year.

Irrigation.

The chief characteristics of the Indian rainfall are its unequal distribution over the country, its irregular distribution throughout the seasons and its liability to failure or serious deficiencies. The normal annual rainfall varies from 460 inches at Cherrapunji in the Assam hills to less than three inches in Upper Sind. The greatest rainfall actually measured at any station in any one year was 905 inches recorded at Cherrapunji in 1861, while at stations in Upper Sind it has been nil. There are thus portions of the country which suffer as much from excessive rainfall as others do from drought.

The second important characteristic of the rainfall is its unequal distribution throughout the seasons. Except in the south-east of the peninsula, where the heaviest precipitation is received from October to December by far the greater portion of the rainfalls during the south west monsoon between June and October. During the winter months the rainfall is comparatively small the normal amount varying from half an inch to two inches while the hot weather, from March to May or June is practically rainless. Consequently it happens that in one season of the year the greater part of India is deluged with rain and is the scene of the most wonderful and rapid growth of vegetation in another period the same tract becomes a dreary, sun burnt waste. The transition from the latter to the former stage often occurs in a few days. From the agricultural point of view the most unsatisfactory feature of the Indian rainfall is its liability to failure or serious deficiency. The average annual rainfall over the whole country is about 45 inches and there is but little variation from this average from year to year the greatest recorded being only about seven inches. But if separate tracts are considered, extraordinary variations are found. At many stations annual rainfalls of less than half the average are not uncommon, while at some less than a quarter of the normal amount has been recorded in a year of extreme drought.

Scarcity.—Classing a year in which the deficiency is 25 per cent as a dry year and one in which it is 40 per cent, as a year of severe drought, the examination of past statistics shows that, over the precarious area, one year in five may be expected to be a dry year and one in ten a year of severe drought. It is largely in order to remove the menace of these years that the great irrigation systems of India have been constructed.

Government Works.—The Government irrigation works of India may be divided into two main classes, those provided with artificial storage, and those dependent throughout the year on the natural supplies of the rivers from which they have their origin. In actual fact, practically every irrigation work depends upon storage of one kind or another but, in many cases, this is provided by nature without man's assistance. In Northern India, upon the Himalayan rivers, and in Madras, where the cold weather rains are even heavier than those of the south-west monsoon, the principal non-storage systems are found.

The expedient of storing water in the monsoon or utilization during the subsequent dry weather

has been practised in India from time immemorial. In their simplest form, such storage works consist of an earthen embankment constructed across a valley or depression, behind which the water collects and those under Government control range from small tanks irrigating only a few acres each to the huge reservoirs recently completed in the Deccan which are capable of storing over 20,000 million cubic feet of water. By gradually escaping water from a work of the latter type a supply can be maintained long after the river on which the reservoir is situated would otherwise be dry and useless.

The Three Classes.—Previously all irrigation works were divided into three classes, Productive Protective and Minor but during the triennium 1921-24 the method of determining the source from which the funds for the construction of Government works was provided was changed and now all works, whether major or minor, for which capital accounts are kept, have been re-classified under two heads, Productive and Unproductive with a third class embracing areas irrigated by non-capital works. The main criterion to be satisfied before a work can be classed as productive is that it shall, within ten years of the completion of construction produce sufficient revenue to cover its working expenses and the interest charges on its capital cost. Most of the largest irrigation systems in India belong to the productive class. The total capital outlay direct and indirect on irrigation and navigation works including works under construction, amounted at the end of the year 1927-28 to Rs. 115 crores.

Unproductive works are constructed primarily with a view to the protection of precarious tracts and to guard against the necessity for periodical expenditure on the relief of the population in times of famine. They are financed from the current revenues of India, generally from the annual grant for famine relief and insurance and are not directly remunerative, the construction of each such work being separately justified by a comparison of the value of each acre protected (based upon such factors as the probable cost of famine relief the population of the tract, the area already protected and the minimum area which must be protected in order to tide over a period of severe drought) with the cost of such protection.

Nearly one-eighth of the whole area irrigated in India from Government works is effected by minor works for which no capital account is kept.

Growth of Irrigation.—There has, during the last fifty years, been a steady growth in the area irrigated by Government irrigation works. From 10½ million acres in 1878-79 the area annually irrigated rose to 19½ million acres at the beginning of the century and to 23 million acres in 1919-20 the record year up to that date. This record was, however, again surpassed in the year 1922-23 when the total area irrigated by all classes of works in India, excluding the Indian States, amounted to 28½ million acres. During the year 1927-28 the total area irrigated by Government works of

all classes in British India amounted to some 27.5 million acres

The main increase has been in the class of productive works, which irrigated 4½ million acres in 1878-79 and rose to 20,756,209 acres in 1926-27. During the year 1927-28 the areas irrigated by productive and unproductive works amounted to 19,146,298 acres and 3,669,024 acres respectively.

The area irrigated in 1927-28 was largest in the Punjab, in which province 10,381,000 acres were irrigated during the year. In addition about 665,000 acres were irrigated from channels which although drawing their supplies from British canals, lie wholly in the Indian States. The Madras Presidency came next with an area of 7 million acres, followed by Sind with 3.5 million acres and the United Provinces with nearly 2½ million.

Capital and Revenue.—The total capital invested in the works has risen from Rs. 42.36 lakhs in 1900-01 to Rs. 115 crores in 1927-28. regards revenue, the Government irrigation works of India, taken as a whole, yield a return of nearly 6½ per cent. on the capital invested in them, this is a satisfactory result as Rs. 42.23 lakhs of the total have been spent on unproductive works, most of which return less than 1 per cent. The capital outlay also includes expenditure on a number of large works under construction which have not yet commenced to earn revenue.

Charges for Water.—The charges for water are levied in different ways in the various provinces. In some, notably in Sind, the ordinary land revenue assessment includes also the charge for water, ½/100th of this assessment being regarded as due to the canals. In others, as in parts of Madras and Bombay, different rates of land revenue are assessed according to whether the land is irrigated or not, and the assessment upon irrigated land includes also the charge for water. These methods may however be regarded as exceptional. Over the greater part of India water is paid for separately, the area actually irrigated is measured, and a rate is charged per acre according to the crop grown. Lower rates are often levied in cases where irrigation is by "lift" that is to say where the land is too high for the water to flow on to it by gravity and consequently the cultivator has to lift it on to his field.

Various other methods of assessment have

been tried, such as by renting outlets for an annual sum, or by charging according to the volume of the water used, but these have never been successful. The cultivator fully understands the principle of "No crops, no charges" which is now followed as far as possible in canal administration, but has no confidence in a system under which his liability for water rates is independent of the area and quality of his crop.

The rates charged vary considerably with the crop grown, and are different in each province and often upon the several canals in a single province. Thus in the Punjab, they vary from Rs. 7-8-0 to Rs. 12 per acre for sugarcane, from Rs. 4 to Rs. 7-6-0 per acre for rice, from Rs. 5-4-0 to Rs. 6-4-0 per acre for wheat, from Rs. 3 to Rs. 4-4-0 per acre for cotton and from Rs. 2 to Rs. 3-4-0 per acre for millets and pulses. In addition water charges are made for additional water. Practically speaking, Government guarantee sufficient water for the crop and give it as available. If the crop fails to mature, or if its yield is much below normal, either the whole or part of the irrigation assessment is remitted.

A somewhat different system, the long lease system, is in force in parts of Bengal and the Central Provinces under which the cultivators pay a small rate for a term of years whether they take water or not. In these provinces where the normal rainfall is fairly high, it is always a question whether irrigation will be necessary at all, and if the cultivators have to pay the full rate, they are apt to hold off until water becomes absolutely essential, and the sudden and universal demand then usually exceeds the supply. By paying a reduced rate every year for a term of years they become entitled to water when required, consequently there is no temptation to wait till the last possible moment, and the demand is much more evenly distributed throughout the season.

Taken as a whole, irrigation is offered on extremely easy terms, and the water rates represent only a very small proportion of the extra profit which the cultivator secures owing to the water he receives.

Triennial Comparisons.—The average area irrigated in British India by Government works of all classes during the triennium 1924-27 was nearly 28 million acres, which is slightly more than in the previous triennium. The areas for each of the three years were 27,156,399 acres in 1924-25, 28,135,122 acres in 1925-26 and 28,243,879 acres in 1926-27.

The results obtained in each province are given in the table below:—

Provinces.	Average area irrigated in triennium 1925-28	Area irrigated in 1928-29
Madras	7,205,587	7,262,096
Bombay (Deccan)	440,536	408,222
Sind	3,886,373	3,580,764
Bengal	37,152	85,195
United Provinces	2,668,266	4,092,955
Punjab	10,442,780	11,536,502
Burma	1,989,022	1,977,841
Bihar and Orissa	560,112	894,833
Central Provinces	417,850	410,319
North-West Frontier Province	269,843	369,145
Rajputana	24,520	35,697
Baluchistan	22,819	31,659
Total	27,078,152	30,667,340

Productive Works.—Taking productive works only a triennial comparison is given in the following table. It will be seen that the average area irrigated by such works during the triennium was nearly a million acres more than in the previous period.

Provinces	Average area irrigated in previous triennium 1921-24	Average area irrigated in triennium 1924-27
Madras	3,081,946	3,732,211
Bombay Deccan	2,831	2,699
Sind	2,545,065	2,894,466
United Provinces	2,243,989	2,462,061
Punjab	9,714,815	9,755,749
Burma	1,350,710	1,531,403
Central Provinces	181,632	163,942
North West Frontier Province	216,814	200,413
Total	19,937,892	20,732,907

Taking the productive works as a whole, the capital invested in them was, at the end of 1927-28, Rs. 78.08 lakhs. The net revenue for the year was Rs. 696 lakhs giving a return of 9.55 per cent as compared with 9 per cent in 1918-19 and 9½ per cent in 1919-20. In considering these figures it must be remembered that the capital invested includes the expenditure upon several works which have only lately come into operation and others which are under

construction, which classes at present contribute little or nothing in the way of revenue, moreover only receipts from water rates and a share of the enhanced land revenue due to the introduction of irrigation are credited to the canals, so that the returns include nothing on account of the large addition to the general revenue of the country which follows in the wake of their construction.

Unproductive Works.—Turning now to the unproductive works, the areas irrigated in the various provinces during the triennium were as below —

Provinces	Average area irrigated in previous triennium 1921-24	Average area irrigated in triennium 1924-27
Madras	290,654	271,455
Bombay-Deccan	268,963	277,709
Sind	838,801	527,787
Bengal	79,121	73,381
United Provinces	180,838	207,812
Punjab	65,844	243,613
Burma	203,863	283,110
Bihar and Orissa	958,607	889,789
Central Provinces	202,220	230,280
North-West Frontier Province	174,035	156,911
Rajputana	19,422	28,272
Baluchistan	22,636	22,070
Total	3,305,993	3,191,588

Non-capital Works—The results obtained from the non-capital works are given below.—

Provinces	Average area irrigated in previous triennium 1921-24	Average area irrigated in triennium 1924-27
Madras	3 170 384	3 174 731
Bombay Deccan	1 57 038	1 57 025
Sind	52,363	87 270
Bengal	21 371	22 185
United Provinces	8 708	8 808
Punjab	684,746	349 768
Burma	78 151	72 870
Bihar and Orissa	1 898	2,246
Central Provinces	47,728	45,689
Total	4 229 450	3 920 543

Capital Outlay—The total capital outlay, direct and indirect, on irrigation and navigation works, including works under construction amounted at the end of 1927-28 to Rs 115 crores. The gross revenue for the year was Rs 12.10 lakhs and the working expenses Rs 4.75 lakhs the net return on capital was therefore 8.37 per cent. Of the several provinces the return on the capital outlay invested in productive works was highest in the Punjab, where the canals yielded 15.08 per cent.

In Madras the percentage of return was 8.90 while in the United Provinces a return of 5.56 per cent. was realised. In considering these figures it must be remembered that the capital invested includes considerable expenditure upon four projects of the first magnitude viz. the Sarda Oudh canals the Sutlej Valley project, the Lloyd Barrage project and the Cauvery (Mettur) project which were under construction and contributed little or nothing in the way of revenue.

Irrigated Acreage—A comparison of the acreage of crops matured during 1927-28 by means of Government irrigation systems with the total area under cultivation in the several provinces is given below.—

Provinces	Net area cropped	Area irrigated by Government irrigation works	Percentage of area irrigated to total cropped area	Capital cost of Government irrigation & Navigation works to end of 1928-29 in lakhs of rupees	Estimated value of crops raised on areas receiving State irrigation in lakhs of rupees
Madras	33 779 000	7,262,000	18.7	15.56	31,99*
Bombay Deccan	84,811,000	403,000	1.1	10.07	3.35
Sind	8 951,000	3 081,000	98.6	15.39	10.54
Bengal	28,708 000	86,000	0.3	4.46	69
United Provinces	42 404 000	4 093 000	9.6	22.92	23.68
Punjab	31 960 000	11 527,000†	36.1	32.15	49.21
Burma	17 537 000	1 977,000	11.3	6.40	8.62
Bihar and Orissa	30 057 000	894 000	2.9	6.28	8.17
Central Provinces	20,559 000	410,000	2.0	6.20	2.90
North West Frontier Provinces	2 805,000	399,000	15.3	2.90	2.40
Rajputana	488 000	35,000	7.0	26	15
Beluchistan	367,000	25,000	6.1	33	6
Total	252,189,000	30 687,000	12.1	1,23.02	1,41.06

* Exclusive of the value of crops raised on some 3 million acres irrigated by non-capital works.

† In addition 1,498,000 acres were irrigated in Indian States.

New Works.—There major works of exceptional importance are now under construction, namely the Sukkur Barrage, and Canals in Sind the Cauvery (Kettur) project in Madras, and the Sutlej Valley Canals in the Punjab. The Sukkur Barrage, when completed, will be the greatest work of its kind in the world, measuring 4,725 feet between the faces of the regulators on either side. The total cost of the scheme is estimated at Rs. 1,835 lakhs, of which the barrage accounts for about Rs. 569 lakhs and the canals for Rs. 1,266 lakhs. A gross area of 7½ million acres is commanded, of which 6½ million acres is culturable and an annual area of irrigation of 6½ million acres is anticipated, of which 2 million acres represent existing inundation irrigation which will be given an assured supply by the new canals. The ultimate annual net revenue forecasted as obtainable from the project, after paying working expenses, is Rs. 184 lakhs, which represents a return of 10½ per cent on capital. This is the return from water rates alone, but a further large increase in general revenues may safely be reckoned upon from the area of 3 million acres of waste which will be brought under cultivation. There will be increases on this account under practically every head of revenue, such as railways, customs, stamps, excise and the like, not to mention the addition to the country's wealth owing to the production, on land at present barren, of crops to the value of Rs. 2,500 lakhs per annum.

The Sutlej Valley Works consist of four wells three on the Sutlej and one on the Punjab, as the Chenab is called below its junction with the Sutlej, with twelve canals taking off from above them. The total area to be irrigated is 5,108,000 acres, or nearly 8,000 square miles. Of this, 2,076,000 acres are perennial and 3,083,000 acres non-perennial. Irrigation 1,942,000 acres are in British territory, 2,826,000 acres in Bahawalpur and 341,000 acres in Bikaner.

The total cost of the scheme was estimated at

Rs. 1,460 lakhs. Upon this a return of 12½ per cent is anticipated from water rates alone. But the scheme has another and even more important source of revenue. On the introduction of irrigation no less than 8½ million acres of desert waste, the property of the three parties concerned, at present valueless will become available for colonisation and sale. It is customary in the *pro-forma* accounts of irrigation projects, to credit a scheme with the interest on the sale proceeds of Crown waste lands rendered culturable by its construction, if this is included, the annual return on the works will amount to nearly 33 per cent. It bids fair, indeed, to rival the Lower Chenab Canal, the return from which was nearly 54 per cent in 1927-28. These anticipations may need modification, however in view of the fact that a revised estimate for the project amounts to Rs. 2,876 lakhs.

The Cauvery Reservoir project, which will cost over 6 crores of rupees and will extend irrigation to a new area of 301,000 acres, is making satisfactory progress. In Bombay Presidency the Bhandardara Dam, 270 feet in height was completed at the end of 1925 and the Bhatgar Dam at the end of 1926. The Damodar River (Canal) project which will irrigate 180,000 acres of rice lands in the Burdwan and Hooghly Districts of Bengal was commenced during the year 1924-27. Excellent progress has been made with the Sardar Bhatgar Canals in the United Provinces and the system was inaugurated by H. E. the Viceroy in the autumn of 1928. This project will irrigate more than a million acres.

A comprehensive irrigation programme extending over a period of 14 years is under investigation in the Central Provinces. The possibility of increasing irrigation in the North West Frontier Province is receiving attention whilst in Bombay Presidency there is a proposal to increase the supply in Lake Fife either by raising the present dam or by constructing subsidiary storage dams in branch valleys.

WELLS AND TANKS

So far we have dealt only with the great irrigation schemes. They are essentially exotic the products of British rule, the real eastern instrument is the well. The most recent figures give thirty per cent of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it, well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at least one-third more than canal watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals increases the possibilities of well irrigation by digging, through seepage, to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used to

a year or two and then allowed to fall into decay. These are temporary or kacha wells. Or they may be lined with timber, or with brick or stone. They vary from the kacha well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikaner where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the *picotiah*, or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot*, or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag, more often it is a self acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be constructed and repaired by village labour, the *mot* is

unimpaired in efficiency. There is also the Persian wheel, an endless chain of earthenware pots running round a wheel. Recently attempts have been made, particularly in Madras, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting well watered lands from extra assessment due to improvement. These advances, termed *intaid*, are freely made to approved applicants, the general rate of interest being 6½ per cent. In Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Periyar Lake in Travancore, holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of

great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zamindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

Bibliography.—Triennial Review of Irrigation in India, 1925-1927. Calcutta, Superintendent of Government Printing. Price One Rupee. The annual irrigation reports in India used to be as arid as the Sahara, consisting of a dull statistical record. They have been greatly improved of recent years and have now assumed a quite satisfactory form. The major review appears once every three years. The first of these triennial reviews was issued in 1922. Between the triennial reviews there is issued a briefer statement recording the progress of each particular year.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super-heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this

season. The summer rains cease in the provinces of the North West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are:—Westerly winds of the temperate zone over the extreme north of India to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, viz., the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total

rainfall for the four months June to September, i.e., the summer monsoon, at the Madras Observatory amounts to 15.36 inches the total rainfall for the three months October to December amounts to 23.18 inches. The other regions in which the weather is unsettled, during this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year; and in some years no storms at all are recorded in normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months December to March, amounts to 5.26 inches; while the total fall for the four months, June to September, is 4.78 inches, showing that the rainfall of the winter is absolutely greater in this region than that of the summer monsoon. These two periods of subsidiary rains are of the greatest economic importance. The fall in Madras, as shown above of considerable amount while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100°, occur in the Deccan, in April the area of maximum temperature between 100° and 105°, lies over the south of the Central Provinces and Gujarat, in May maximum temperatures, varying between 105° and 110° prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana, the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 129° registered at Jacobabad on June 18th, 1897. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat. 31°-35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropics or beyond. To the north of this circulation, i.e., between the Equator and Lat. 20° to 25° North there exists a light unsteady circulation, the remains of the north-east trades, that is to say about Lat. 20° North there is a north-east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropics. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture-laden winds rushes forward, becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the south-west monsoon proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S to Lat. 30° N the southern half being the south-east trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapour.

The current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian Sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma, East Bengal and Assam while another portion curves to south at the head of the Bay and over Bengal and then meeting with the barrier of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, etc., from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India, the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional minor rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south west and is thus directed towards the Tenasserim hills and up the valley of the Irrawaddy to which it gives very heavy to heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then deflected westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and almost daily rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar

in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The total rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras, it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma, it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is —

May	2 6	inches
June	3 3	"
July	11 9	"
August	10 5	"
September	7 2	"
October	3 3	"

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, viz., May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution —

	Jan.	Feb.	Mar.	Apr.	May	June
Bay of Bengal				1	4	13
	July	Aug	Sep	Oct	Nov	Dec.
Bay of Bengal	41	35	45	34	22	8
	Jan.	Feb.	Mar.	Apr.	May	June
Arabian Sea				..	2	15
	July	Aug	Sep	Oct.	Nov	Dec.
Arabian Sea	2		1	1	5	

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces variations from the normal, and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are —

- (1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.
- (2) A prolonged break in July or August or both.
- (3) Early termination of the rains, which may occur in any part of the country.

(4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north west of India. This area of fine weather and dry winds extends eastward and southward,

the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region, fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

(For monsoon of 1930, see page 355)

INDIA METEOROLOGICAL DEPARTMENT.

The India Meteorological Department was instituted in 1875 to combine and extend the work of various provincial meteorological services which had sprung up before that date. The various duties which were imposed on the department at the time of its formation were from time to time supplemented by new duties. The main existing functions, more or less in the historical order in which they were assumed, may be briefly summarised as follows—

(a) The issue of warnings to ports and coastal districts of the approach of disastrous storms since the introduction of wireless telegraphy this has been extended to include the issue of storm warnings to ships in Indian seas.

(b) The maintenance of systematic records of meteorological data and the publication of climatological statistics. These were originally undertaken in order to furnish data for the investigation of the relation between weather and disease.

(c) The issue to the public of up-to-date weather reports and of rainfall forecasts. These duties were originally recommended by a Committee of Enquiry into the causes of famine in India.

(d) Meteorological researches of a general character but particularly regarding tropical storms and the forecasting of monsoon and winter rainfall.

(e) The issue of seasonal rainfall forecasts.

(f) The issue of telegraphic warnings of heavy rainfall by special telegrams to district officers on departmental warning lists (e.g. canal and railway engineers) and by means of the ordinary daily weather telegrams to the public in general.

(g) Supply of meteorological, astronomical and geophysical information in response to enquiries from officials, commercial firms or private individuals.

(h) Technical supervision of rainfall registration carried out under the control of provincial Government authorities.

(i) The study of temperature and moisture conditions in the upper air by means of instrument-carrying balloons and of upper winds by pilot balloons.

(j) The issue of weather reports and warnings to air-craft.

(k) Special investigations at the Airship Base Karachi. In addition to these meteorological duties the India Meteorological Department was from time to time made responsible for various other important duties such as—

(l) Determination of time in India and the issue of time signals, also the determination of errors of chronometers for the Royal Indian Marine and the Royal Navy.

(m) Observations and researches on terrestrial magnetism at Bombay.

(n) Regular study (mainly by spectroscopic examination) of the sun at the Solar Physics Observatory at Kodakanal.

(o) Maintenance of seismological instruments at various centres.

Organisation prior to the demands of aviation.—It is necessary to note that practical meteorology implies a meteorological organisation not merely individual meteorologists relying upon their own personal and purely local observations. The making of a single forecast in any of the larger meteorological offices of the world requires the organised co-operation of some hundreds of persons. In India some 250 observers co-operate daily to take simultaneous observations at about 200 separate places and hand in their reports to telegraphists who transmit them to centres, where for rapid assimilation clerks decode them and chart them on maps, meteorological experts then draw therefrom the conclusions on which their forecasts are based. There are other observatories, which take observations for climatological purposes but do not telegraph them.

As aviation has been and still is making rapidly increasing demands on meteorologists in India, it is easier to understand the constitution and needs of the department, if we first consider the organisation prior to the demands of aviation. In order to carry out the functions imposed upon it, the department had a central office, five principal sub-offices and 28 pilot balloon observatories and supervised 250 weather observatories, principally of the third class distributed over a region stretching from Persia, Aden and Zanzibar on the west to Burma on

* The actual numbers were 10 first class, and fifth class. A first class weather observatory continuously recording pressure, temperature, rainfall, in addition to instruments read by eye, is taken two or three times daily and centres. A third class observatory takes by telegram to one or more forecasting centres does not telegraph. A fourth class observatory and rainfall or (b) of temperature and rainfall and telegraphs only rainfall amounts.

2 second class, 200 third class, 29 each fourth is furnished with autographic instruments for humidity, wind direction and velocity and. At a second class weather observatory observers are telegraphed to one or more forecasting readings (a) daily at 8 hours and sends the data or (b) twice daily at 10 hours and 16 hours, but records observations (a) of temperature, wind only, while a fifth class observatory records

the east. A brief summary is given below of the work at each of the principal observatories and offices—

Headquarters Office, Poona.—The general administration of the department is carried on by the headquarters office in Poona. It receives the telegraphic reports of morning observations collected at practically all pilot balloon and 1st 2nd 3rd and 5th class observatories and issues daily a telegraphic summary of general weather conditions with forecasts of probable changes in weather during the next twenty four hours. It serves as the main forecasting centre for the Indian area and prepares and publishes the Daily Weekly and Monthly Weather Reports and an Annual volume entitled the India Weather Review. It undertakes the issue of heavy rain warnings for practically the whole country excepting north-east India, and the issue of warnings for storms in the Arabian Sea. It is responsible for practically all climatological work in India and for the design, specification test and supply of special meteorological instruments. On its transfer from Simla to Poona the headquarters office was equipped as an upper air observatory and a first class weather observatory and has also been designed to provide facilities for research in theoretical and practical meteorology.

Meteorological Office and Observatory Alipore, Calcutta.—The Alipore office serves as a regional forecast centre and is responsible for the publication of the Calcutta Daily Weather Report for north-east India, for storm warning in the Bay of Bengal and heavy rainfall warning in north-east India. It has complete charge of all 2nd 3rd 4th and 5th class observatories in north-east India (from Assam to Orissa), while its other duties consist in supplying all weather observatories with ordinary instruments and stores, keeping a stock of such instruments, and supplying time-signals by time ball to the Port of Calcutta and by wireless to shipping at sea. It is also a first class weather observatory, pilot balloon observatory and seismological station.

Upper Air Observatory, Agra.—Agra Observatory is the headquarters of upper air work in India. It is responsible for maintaining all the pilot balloon observatories in India and neighbouring countries and supplying them with necessary equipment for carrying on daily pilot balloon observations and supervising their work. All data from pilot balloon observatories are collected, checked and statistically summarised at Agra. This observatory is also the principal centre of upper air research work in India. There is a seismological station attached to this observatory.

Colaba and Alibon Observatories.—These observatories specialise in the study of geophysics, particularly terrestrial magnetism and seismology, and in addition carry on the duties of a first class weather observatory. They take star and sun observations for the determination of time and are responsible for the time-ball service at the Bombay Harbour and the rating of chronometers belonging to the Royal Indian Marine and Royal Navy.

Kodakkanal.—The Observatory at Kodakkanal specialises in the study of the physics of the sun, and is specially equipped for spectroscopic observations and research. This observatory also undertakes the duties of a first class weather observatory and a seismological station.

Madras.—The most important duty of the Observatory is the supply of time by time ball signal to local shipping and to the whole civil population of India by telegraphic signal throughout the Indian telegraph system. The Observatory issues the Madras Daily Weather Report throughout the year and in addition carries out the duties of a first class surface observatory and of a pilot balloon station.

Special organisation to meet the needs of aviation.—The above represented the activities of the department prior to the introduction of aviation in India. With the development of civil and military aviation and rather rapid expansion of their activities in recent years fresh duties of a different character devolved upon the department and necessitated a more or less complete overhaul of the pre-existing arrangements.

Definite recommendations regarding the nature of information to be supplied to aircraft, the exhibition of current weather information at aerodromes and the meteorological organisation of international airways have been embodied in Annex G of the International Convention of Air Navigation. In accordance with these recommendations expert meteorologists should be stationed at aerodromes at reasonable intervals along the airway to supply on clear to the aviation personnel current information and forecasts of weather conditions along the routes up to the next aerodrome of the same class. Forecast centres should be established at least at each main aerodrome along aerial routes and forecasts prepared at such centres should be transmitted to the other aerodromes for the information of pilots. These recommendations involve the opening up of new forecast centres in India. Other recommendations refer to hours and kind of observations and manner of codifying them.

A comparison of the practices in Europe and the United States of America and various International recommendations with the past Indian programme of telegraphing observations once daily shows that at each observatory in India fuller and more frequent observations should be taken and be made available to aviators in internationally approved codes, and that the number of observatories should be increased.

It has therefore become necessary to arrange for the preparation of two weather charts per day at each regional forecast centres in India as are specially concerned with aviation, to raise to 2nd class status most of the existing weather observatories reporting to these centres and to create some new observatories. Further, on account of the fuller observations required,

* In connection with the Bhubra to Rangoon aviation schemes 10 new pilot balloon observatories and 34 new weather observatories have been started or proposed while a change in the status of more than half the existing 3rd class observatories has been proposed. If these schemes are sanctioned the numbers of observatories will be 13 first, 17 second, 67 third, 29 fourth and 23 fifth class observatories.

new instructions for observers have been drawn up, new registers for the recording of observations and new telegraphic codes more in conformity with international agreement and suited to the changed method of reporting of observations have been prepared. These have been introduced at observatories from the Persian Gulf to northwest India and will be introduced elsewhere as air routes extend.

The forecast centres already started or proposed to meet the needs of aviators are Quetta, Peshawar, Karachi, Delhi and Rangoon while work at the existing offices at Calcutta and Poona will require to be extended.

Quetta and Peshawar.—Aviation on a regular basis was first started in this country by the Royal Air Force in north-west India, and the necessity for opening local forecast centres was first experienced there. Two forecast centres were accordingly started four years ago at Quetta and Peshawar each under an R.A.F. Meteorologist who was entrusted with the charge of issuing forecasts of weather over the Lahore Peshawar-Quetta Karachi air routes for R.A.F. aeroplanes and detailed local forecasts and warnings each for his own immediate neighbourhood. The Meteorological Department supplies instruments for the use of the R.A.F. Meteorologists meets the cost of the staff of clerks and observers at each centre and supplies data by telegram from its observatories. The technical work done at these stations is supervised by the Director General of Observatories.

Karachi.—For civil aviation preparations had to be made for the first time by the department in aid of the Cairo Karachi aeroplane service. A new forecast centre was established at Karachi its initial function being the issue of weather reports and forecasts for the flying sector Karachi to Chabber. In connection with the larger Imperial Airship Scheme which has its own distinctive demands on meteorological services, India was asked to undertake responsibility for supplying information for the section extending from Basra to Karachi. Necessary schemes were drawn up and Government decided that action should be taken in three distinct and separate stages. As a result of the preliminary scheme additional surface observatories were established along the flying route and pilot balloon observatories to determine the upper air currents were started at Bahrain, Muscat and Gwadar, thus enabling the Karachi Office to gather and study an increased supply of weather information from the Arabian and Mekran coasts. Arrangements were made for the preparation of two charts daily at Karachi based on 4 and 14 hours G.M.T. observations telegraphed from stations in the Persian area and parts of north-west India.

In order to meet the requirements of the London Karachi Air Mail Service arrangements were completed for issuing through the Karachi Civil Wireless Station synoptic weather broadcast on short wave at regular intervals also for supplying weather reports by wireless to aeroplanes in flight and for receiving synoptic broadcasts from Baghdad and Egypt. The forecast office is temporarily located in Karachi.

contonment and will be transferred to Drigh Road civil aerodrome, when buildings are provided there. Meanwhile a first class weather observatory and pilot balloon station have been started at Drigh Road. The weather observatories in Persia and Arabia and along the Mekran coast are under the charge of the Meteorologist at Karachi.

On the newly opened Karachi-Delhi air route, the Karachi forecast centre is responsible for weather reports and forecasts between Karachi and Jodhpur.

Delhi.—A forecast centre has recently been opened at Delhi and will be specially responsible for the supply of weather reports and forecasts to aviators between Jodhpur and Allahabad or Gaya. A pilot balloon and first class weather observatory is attached to this office.

Calcutta.—In connection with the Delhi Calcutta and Calcutta-Rangoon air routes proposals have been made to extend the existing duties of this centre. It will become responsible for weather reports and forecasts to aviators between Allahabad or Gaya and Akyab.

Rangoon.—The establishment of a new forecast centre and first class observatory at Rangoon under a trained Meteorologist has been proposed. If sanctioned it will become responsible for weather reports and forecasts to aviators between Akyab and Victoria Point.

Poona.—The Poona office is at present responsible for weather reports and forecasts to aviators on routes outside northern India.

Investigational work.—Besides the routine duties such as issue of weather reports forecasts and warnings of storms and heavy rain, the Indian Meteorological Department has under taken during recent years a number of investigations in theoretical and practical meteorology and other allied subjects the most important amongst them is the study of the free atmosphere over the country by means of various types of balloons. The Agra observatory and its sub-stations the number of which has grown rapidly in the last two or three years and is over 30 at present observe and record wind velocities in the upper layers of the atmosphere. These data are not only of great assistance in connection with weather forecasting and storm warning but have also proved useful for forecasts of seasonal rainfall. A method of forecasting the winter rainfall in northern India from upper air data is being developed and is already in tentative use in the department.

Measurements of pressure, temperature and humidity up to heights of about 15 miles by means of sounding balloons (i.e. with instruments attached) are being made at Agra since 1915 and have recently been started at Poona also. A number of these instruments penetrate into the stratosphere or the region where air temperature ceases to fall with height but remains constant or increases with height. The base of the stratosphere is about 23 miles above sea level in the India latitudes. It appears that although the lowest temperature over the surface of the

earth occurs near the poles the lowest free air temperatures occur at heights of about 12 miles above the equatorial regions, thus giving rise to the apparently paradoxical truism that the coldest air lies over the equator

At the Poona Weather Office modern European theories of meteorology have been applied to the study of Indian weather charts. The physical aspects of weather were studied and attempts were made to recognise masses of air having different histories and physical properties. Diagnosis of weather charts by such means has been frequently successful and the new ideas have been found helpful in forecasting under Indian conditions

Other scientific activities of the Department consist in the seismographic records at various centres magnetic work at Ailbag and Bombay and Solar Physics observations at the Kodalkanal observatory. A careful study has been made at Bombay of microclimates which are believed to be due to sea-waves and appear to furnish early indications of the existence of disturbed weather out at sea. Other interesting experiments on geophysical subjects have been undertaken or completed at Bombay in recent years. Recently the observatory at Kodalkanal has undertaken the collection of spectrograms for the determin-

tion of the amount of ozone in the upper air by means of a Dobson's spectrophotometer which has been loaned to the observatory.

With a view to study the origin and nature of nor' western, the violent local storms which almost every year cause considerable loss of life and property in north east India a scheme for detailed weather observations in that area was drawn up in 1927. The details of the scheme were worked out at Calcutta and the work is in progress since the beginning of last year. A special expedition was arranged to study the upper air conditions over Bengal during the last nor western season.

At Karachi arrangements had to be made for the study of special meteorological problems in connection with airships. The two most important problems for the safe landing and mooring of airships relate to experiments in wind structure and the thermal structure of the air in the first 200 to 300 feet above ground at the air base. For the purposes of studying temperature conditions at the airship base a mast 250 feet high has been erected at Drigh Road and special instruments are being installed at suitable heights on the mast. The information provided by such apparatus is of great importance and its installation at all existing or prospective airship bases is desired by airship authorities.

MONSOON OF 1930.

The S W Monsoon of the year was on the whole fairly normal in its incidence throughout the season except in August when the activity of the current for the month was in the main confined to North East India and Burma.

June.—The Monsoon current on the Arabian Sea side was initially weak and appeared later than usual on the West Coast on the 8th and on the Konkan Coast on the 10th. It gradually gathered strength and in the following week extended inland and on the whole was normally active over its field. Invigorated later under the influence of two depressions in the North Arabian Sea off the Kathiawar Coast—one on the 21st and the other on the 28th—the current particularly intensified in the Konkan, Guzerat and Kathiawar enabling it also to carry strong monsoon pulses into Sind where notably the rainfall gathered for the month was 314 per cent in excess.

The Bay branch of the Monsoon was markedly accelerated in its advance by a storm which formed off the Ceylon Coast about the end of the first week in May. It helped to carry the monsoon into Burma on the 10th May and it remained active in lower Burma throughout that month. The current was well established later in Upper Burma by the 27th May and extended into Assam on the 1st June into Bengal on the 2nd and into Bihar and Orissa by the third week. A Bay storm off the Orissa-Ganjam Coast on the 25th stimulated the activity of the current along the North Madras Coast and in the Central Provinces for the remaining two days of the month. Averaged over the plains of India the rainfall for June was in defect by 3 per cent.

July.—The Bay storm of the 25th June as it moved past the Central Provinces to the West United Provinces gave widespread and heavy rains all along its track during the first week and helped to carry fairly strong monsoon past the United Provinces and East Central India into the Punjab. Three more depressions formed at the head of the Bay respectively in the first, second and fourth week of the month. While the first and third disturbances passing through Chota Nagpur to the East United Provinces weakened over there merging into the seasonal trough of low pressure the second intensified into a storm and traversing the country north westwards reached Sind on the 23rd a week after its development in the Bay. All these disturbances determined heavy rains along and in the vicinity of their tracks. In the Peninsula the monsoon remained generally weak during the first three weeks. It revived later in South Madras and South Deccan and continued fairly active to the end of the month. On the whole the monsoon throughout the month was normally active in Burma, North East India, Central India and North-West India, notably vigorous in Sind, Chota Nagpur, and the Punjab, and markedly weak in the Peninsula. Averaged over the plains of India the month's rainfall was in excess by 4 per cent.

August.—Only one short-lived disturbance formed at the head of the Bay about the 2nd

It passed inland through Orissa into the East United Provinces where it weakened after the 5th. It served to carry strong monsoon between the 8th and the 12th into East Central India and from the United Provinces to North Punjab. It also served to invigorate to a certain extent the Arabian Sea current extending the monsoon rains into Guzerat, West Central India and Rajputana. A general break in the rain set in the Peninsula area from the end of the first week and lasted almost to the end of the month. By the end of the second week the break extended over North West India, and by the end of the following week over the United Provinces. Normal activity of the monsoon was thus in the main confined during this period to North-West India and Burma only. Averaged over the plains of India, the total fall for the month was in defect by 18 per cent.

September.—A general strengthening of the monsoon current started early in the month mainly induced by a Bay depression formed off the Orissa Coast on the 7th. It moved slowly past West Central Provinces into the East United Provinces and after causing widespread and heavy rains along and in the vicinity of its track it became diffused and unimportant after the 17th. In the Peninsula the current remained fairly strong for the first two weeks and also from the 11th to 15th from Guzerat to East United Provinces in the West United Provinces and in East and North Punjab. The monsoon began to recede from North-West India after the 15th. From the 11th to the end of the third week the activity of the Arabian Sea current was confined in the main to the West Coast south of Bombay. The Bay branch remained active on the whole in Burma throughout the month. In North East India it was fairly active for the first fortnight, and a depression which formed on the 21st off the Orissa Coast strengthened the current carrying heavy rains once again into North-East India and East United Provinces upto the 28th. Averaged over the plains of India the month's rainfall was in excess by 1 per cent.

October.—The S W Monsoon began gradually to recede from North-East India early in the month and the N E Monsoon current was established in the south of the Bay about the third week. Thunderstorms more or less severe usually associated with this period of transition occurred all over the country. The weather normally settles after such reversal of the currents but conditions soon became unsettled by the formation of a storm in the Bay off the Orcomandel Coast about the 23rd. It moved westwards, crossed the coast near Nagapatam and cutting across the south of the Peninsula passed out into the Arabian Sea. The storm intensified here and moving northwards almost parallel to the coast recurred inland near the Surat Coast. It took a north-easterly course thereafter and disappeared over the East United Provinces. Widespread and heavy rains were caused all along the track, and gales and squalls were experienced on and off the West Coast during

the northward passage of the storm. The month's rainfall averaged, over the plains of India was 12 per cent in excess.

The total fall for the season—June to September—

been—averaged over the plains of India was 4 per cent in defect. The following table gives detailed information of the seasonal rainfall for the period June to September —

DIVISIONS	RAINFALL JUNE TO SEPTEMBER

Famine.

To the student of Indian administration nothing is more remarkable than the manner in which great problems arise, produce a corresponding outburst of official activity to meet them and then fall into the background. This general truth is illustrated by a study of the history of famine in India. For nearly forty years it was the bogey of the Indian administration. The forecasts of the rains were studied with acute anxiety. The actual progress of the rains was followed with no less anxiety, and at the first signs of a bad or poor season the famine relief machinery was furnished up and prepared for any emergency. The reason for this is clear if we examine for a brief space the economic condition of the Indian peasantry. Nearly three-quarters of the people are directly dependent on agriculture for their daily bread. Very much of this agriculture is dependent on the seasonal rains for its existence. Immense areas in the Bombay Presidency, Madras, the United Provinces and Central India are in a region of erratic and uncertain rainfall. The rainy season is short and if for any natural reason there is a weakness, or absence of the rain bearing currents, then there is either a poor harvest or no harvest at all. In Western lands everyone is acquainted with the difference between a good and a poor season but western countries offer no parallel to India, where in an exceptionally bad year wide tracts of thickly populated land may not produce even a blade of grass. In the old days there were no rail ways to distribute the surplus of one part of India to the districts where the crop had failed. There were often no roads. The irrigation works were few and were themselves generally dependent on the rainfall for their reserves. The people lived from hand to mouth and had no store of food to fall back upon. Nor had they any credit. In the old days then they died. Commencing with the Orissa famine in 1865-67 the Government of India assumed responsibility for the saving of human life in such crises. After the famine of 1899-1900 this responsibility was also shouldered by the Indian States. Stage by stage this responsibility was expressed in the evolution of a remarkable system of famine relief covering the whole field. But now that machinery has reached a remarkable degree of perfection, it is resting in the official armchairs, because the conditions have changed. The whole of India is covered with a network of railways, which distributes the produce of the soil to the centres where food is required. The extension of irrigation has enormously increased the product of the soil and rendered large areas much less dependent on the monsoon rainfall. At the same time the scientific study of the problems of Indian agriculture has raised the capacity of even the "dry" zones. The peasantry has accumulated a certain reserve against the rainless days from the prosperity which soon passed the period of high prices. The rapid spread of the co-operative credit movement has mobilised and strengthened rural credit. The spread of manufacturing enterprise has lightened the pressure on the soil. The relation of famine to the question of Indian administration has therefore changed. In an exceptionally

bad year it may create administrative difficulties, it has ceased to be an administrative and social problem.

Famine under Native Rule.

Famines were frequent under Native rule, and frightful when they came. In 1680, says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1681 a Dutch merchant reported that only eleven of the 360 families at Sully survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons but the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine. Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, a valuable for the whole of India. In India there is now no such thing as a food famine, the country always produces enough food for the whole of the population, famine when it comes is a money famine and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines

The Orissa famine of 1865-67 may be taken as the starting point because that induced to first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action, but late food was poured into the district in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day at a cost 95 lakhs). The mortality was very heavy, and it is estimated that a million people or one-third of the population, died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1869-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900. It is estimated that out of a total population of a million and a half in Marwar, one million emigrated. There was famine in Behar in 1873-74, then came the great South Indian famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the popu-

lacked 58,500,000. Warned by the excessive expenditure in Bihar and actuated by the desire to secure economy the Government relief programme was not entirely successful. The excessive mortality in this famine is said to have been 5,350,000 in British territory alone. Through out British India 700,000,000 units were relieved at a cost of Rs. 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs 84 lakhs.

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which amended to meet later experience, form the basis of the famine relief system to-day. They recommended (1) that employment should be given on the relief works to the able bodied, at a wage sufficient for support, on the condition of performing a suitable task, and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency, except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending the Famine Code to the provincial governments, the Government of India laid down as the cardinal feature of their policy that the famine wage "is the lowest amount sufficient to maintain health under given circumstances. While the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort. Provincial codes were drawn up, and were tested by the famine of 1896-97. In that 807,000 square miles were affected with a population of 62,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs 7½ crores, revenue was remitted to the extent of Rs 1½ crore, and loans given aggregating Rs 1½ crore. The charitable relief fund amounted to about Rs 1½ crore, of which Rs. 1½ crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the shock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Bihar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute. It was intense in Rajputana, Sindh, Central India, Hyderabad and Kathiawar. It was marked by several distinctive features. The

rainfall over the whole of India was in extreme deficit, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the locality was thought to be famine immune, were affected, the people here being softened by prosperity, owing to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Indian States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Indian States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 8½ crores, the Indian States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemics of malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony Macdonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves, whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of "putting heart into the people." The machinery suggested for this purpose was the prompt and liberal distribution of advance loans, the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expansive plan of relief and secured by liberal preparations, constant vigilance, and a full enlistment of non-official help. The wage scale was revised, the minimum wage was abolished in the case of able bodied workers, payments by results were recommended, and proposals were made for saving cattle.

The modern system.

The Government of India are now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops; programmes of suitable relief works are kept up-to-date, the country is mapped into relief circles, reserves of tools and plant are stocked. If the rains fail, policy is at once declared,

non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Seed works are then opened, and if labour in considerable quantities is estimated, they are converted into relief works on Coode principles. Poor houses are opened and gratuitous relief given to the indigent. On the advent of the rains the people are moved from the large works to small works near their villages, liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe, the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera which so often accompanies famine, and malaria, which generally supervenes when the rains break.

Famine Protection.

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans, protective works, which do not pay directly from revenue, in order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1875. It was decided to set apart from the general revenues Rs 1½ crores annually or one million sterling. The first charge on this grant is famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission an elaborate programme of protective irrigation works has been constructed, particularly in the Bombay Deccan—the most famine-susceptible district in India—and in the Central Provinces.

Under the Statutory Rules framed under the Government of India Act of 1919, Provincial Governments (except Burma and Assam) are required to contribute from their resources a fixed sum every year for expenditure on famine. These annual assignments can be expended on relief of famine only, the sum not required for this purpose is utilised in building up a Famine Relief Fund. The Fund provides, as its main and primary object, for expenditure on Famine Relief proper, the word "Famine" being held to cover famine due to drought or other natural calamities. The balance at the credit of the Fund is regarded as invested with the Governor-General-in-Council and is available for expenditure on famine, when necessary and, under certain restrictions, on protective and other works for relief of famine.

The Outlook

Such is brief is the official programme and organisation which has been built up out of the experience and practice of the

past. Yet everything goes to show that Government activity to save human life will never be wanted in the future on the colossal scale of former times, even so recently as 1880-1900. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1899. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions, the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant, the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power

The causes of this economic change in the conditions of India, whose influence is widespread are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot eluded to his village until State relief in one form or another was brought almost to his doors. Now at the first sign of the failure of the rains he girds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is rarely equal to the demand, or on the constructional works which are always in progress either through State or private agency in the country. Then the ryot generally commands some store of value, often misnamed a hoard. The balance of exports in favour of India in normal times is approximately \$40 millions a year. The gold and silver bullion in which this is largely liquidated is distributed all over the country, in small sums or in ornaments, which can be drawn upon in an emergency. The prodigious coining of rupees during the last two years of the war, and the continuous absorption of gold by India, represent small diffused savings, which take their form owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation, and in other Provinces, particularly in the famine-susceptible tracts of the Bombay Deccan, irrigation works have been constructed, which break the shock of a failure of the rains. Then the natural growth of the population has been reduced by plague and famine diseases, followed by the great influenza epidemic of 1918-19, which swept off five millions of people. This has not only prevented the increase of congestion, but has brought some areas particularly in the Indian States, below their former population-supporting capacity. The increase of railways distributes the resources of the country with ease, the spread of the co-operative credit movement has improved rural credit. Finally, there is the considerable development of manufacturing industry, which is generally short of labour and helps to absorb the surplus of a famine year. Whilst the Government is completely equipped with a famine code, there is no reason to suppose that there will ever recur such an emergency as

that of 1899. Famine can now be efficiently met by the liberal distribution of *tagavi*, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, the provision of cheap fodder for the cattle, with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres.

The increased resisting power of the people was effectively demonstrated during the famine of 1920-21, which was due to the failure of the monsoon towards the end of the year 1920. The distress which appeared in the end of 1920 persisted during the early months of 1921 and regular famine was declared in parts of Madras, Bombay, Central Provinces and Baluchistan. Local distress prevailed also in Bengal, Punjab and Central India. The largest number of persons on relief of all kinds did not exceed 6.45 million which was considerably less than 2% of the total population of the area affected by the failure of the monsoon.

The Indian People's Famine Trust.

Outside the Government programme there is always scope for private philanthropy especially in the provision of clothes, help for the superior class poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed particularly in the United Kingdom for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine fund, the Maharaja of Jaipur gave in 1900 a sum of Rs 15 lakhs, in Government securities to be held in trust for the purposes of charitable relief in seasons of general distress.

This Trust in a few years became swollen to Rs 28,10,000 and has ever since been maintained at that figure. This Trust is called the Indian People's Famine Trust, and was constituted under the charitable endowment Act, 1890. The income of the Trust is administered by a board of management consisting of 13 members appointed from different provinces and Indian States. Mr E. Burden, C.S.I., O.I.C., I.C.S., Auditor General in India, is the Secretary & Treasurer (elect) of the Trust. The money is invested and the principal never taken for expenditure.

The income from it is utilised for relief work as necessary and unexpended balances are temporarily invested, so as to make available in years of trouble savings when expenditure is not necessary. The temporary investments—in Government Securities—at the end of 1930 stood at Rs. 2,60,900 and the cash balance at the same time was Rs. 42,951 12 6, so that the total available for expenditure at the commencement of 1930 was Rs. 3,03,851 12-6. The returns for 1930 were not complete when this chapter was revised.

The whole conditions to meet which the Trust was founded have changed in recent years. This is the result of the improved policy of Government in regard to famine relief and of the difference in the meaning of the word famine in consequence of the improvement of transport communications and other factors affected by modern progress. An area stricken by failure of seasonal rains now obtains supplies from other regions in a manner impossible before the development of railways and of modern marketing practice and Government help its people by loans given direct or through Co-operative Societies to tide them over the period of scarcity. The experience of successive visitations of scarcity in different parts of the country also proves that the general economic progress of the people makes them able to meet temporary periods of stress in a manner formerly unimaginable. Famine in the old terrible sense of the term has in fact ceased to occur. This was well illustrated by the events of 1919, when the land suffered from a failure of the rains more general throughout India and worse in degree than any previously recorded by the Meteorological Department but the crisis was borne with a minimum of suffering. The demands upon the Famine Trust have consequently so greatly diminished in their original sense that hardly any money is now distributed from it for the relief of famine in the proper sense of the word, resulting from rain failure and expenditure has mainly become grants of assistance to sufferers from floods. The total expenditure upon real famine in the old sense was only Rs. 60,000 during the year 1929, while expenditure on relief of distress caused by floods was Rs. 4,75,000 in the same year. The terms of the Trust, fortunately permit of management on lines according with modern needs.

BOY SCOUTS.

The Boy Scouts movement, initiated in England by Lt.-Gen Sir Robert Baden Powell (the Chief Scout), has spread widely in India, both among Europeans and Indians. The Viceroy is Chief Scout of India and the Heads of Provinces are Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves.

It is confidently anticipated that in the Boy Scout Movement will be found a natural means of bridging the gulf between the different races existing in India. The movement is non-official, non-military, non-political and non-sectarian. Its attitude towards religion is to encourage every boy to follow the faith he professes. Every boy admitted as a Scout makes a three-fold promise to do his best (1) to be loyal to God and the King, (2) to help others at all times, and (3) to obey the Scout law. The law referred to lays down—

- 1 That a Scout's honour is to be trusted,
- 2 That he is loyal to God and the King, his parents, teachers, employers, his comrades, his country and those under him,
- 3 That he is to be useful and to help others
- 4 That he is a friend to all and a brother to every other scout, no matter to what social class the other belongs,
- 5 That he is courteous,
- 6 That he is a friend to animals,
- 7 That he obeys orders,
- 8 That he smiles and whistles under all difficulties,
- 9 That he is thrifty,
- 10 That he is clean in thought, word and deed

INDIAN HEAD-QUARTERS

Patron.—H. R. H. The Prince of Wales K. G.
Chief Scout for India.—His Excellency Lord Irwin

Chief Commissioner.—(Vacant)

General Secretary.—George Cunningham Esq. C.I.E., O.B.E., J.C.S.

General Council for India.—

Ex-officio.—The Chief Commissioner for India,
 The Provincial Commissioners,
 The Presidents of Provincial Councils.

Elected.—(Not completed)

Nominated.—(Not completed)

Provincial Commissioners for Bombay Presidency.—Sir Chunilal Mehta, M.A., LL.B., K.C.S.I.,
Provincial Secretary for Bombay.—M. Y. Venkateswaram, Esq., M.A.

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been laid before the war is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

Water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations and then distributed over the fields.

The Industrial Commission emphasised the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died, but Mr. Meares issued a preliminary report in September, 1919, summarising the present state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr. Meares showed that industries in India now absorb over a million horse power, of which only some 225,000 h.p. is supplied by electricity from steam, oil or water. The water power so far actually in sight amounts

to 14 million horse-power, but this excludes practically all the great rivers, which are at present uninvestigated. Thus the minimum flow of the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse power in the Irrawaddy and Chindwin rivers given in the report of the London Comjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila, Mula and the Koyana Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works.

The greatest water-power undertakings in India—and in some respects the greatest in the world—are the Tata hydro-electric schemes recently brought to fruition, and constantly undergoing expansion, for the supply of power in the city of Bombay. Bombay is after London the most populous city in the British Empire and it is the largest manufacturing town in Asia. Its cotton mills and other factories use over 100,000 horse power of mechanical energy and until a year or two ago this was almost entirely provided by steam, generated by coal coming from a distance—mostly Bengal. The Tata Hydro-Electric Power Scheme, now an accomplished fact, marked one of the big steps forward made by India in the history of its industrial development. It was the product of the fertile brain of Mr. David Gostling, one of the well known characters of Bombay, nearly a generation ago. The exceptional position of the Western Ghats, which rise 2,000 feet from sea-level which a very short distance of the Arabian Sea, and force the monsoon as it sweeps to land, to break into torrential rain at the mountain passes was taken full advantage of, and the table lands behind the Ghats form a magnificent catchment area to conserve this heavy rainfall in Mr. Gostling pressed the scheme on the attention of Mr. Jamsetji Tata for years, and with perseverance collected data which he laid before that pioneer of the larger industries in India. He summoned the aid of experts from England to investigate the plan. The scheme was fully considered for six long years. Meanwhile both Mr. J. N. Tata and Mr. David Gostling passed away, but the sons of the former continued the work of their father and on Mr. Gostling's death, Mr. R. B. Joyner's aid was sought to work out the Hydroelectric side of the undertaking.

The scheme completed, a syndicate secured the license from Government and an endowment was made to enlist the support of financiers of England who tried to impose terms which were not acceptable. Meanwhile, the attorney at Mr. George Clarke (now Lord Sydenham), then

gate B H P of 55,000 H P in service. In addition to the cotton and flour mills which have contracted to take supply from the Company for a period of ten years, an agreement has been completed whereby the Tata Hydro Electric Company, the Andhra Valley Power Supply Company and the Tata Power Company between them supply the whole of the electric power required by the Bombay Electric Supply and Tramways Company, Limited and also the power for the electrification of the Harbour Branch and Bombay Kalyan section of the G I P Railway. There remain many prospective buyers of electrical energy and the completion of the Company's full scheme will not suffice for all such demands. Besides the Bombay cotton mills, which alone would require about 100,000 horse power there are, for instance, tramways, with possibilities of suburban extensions. The probable future demand is roughly estimated at about 180,000 H P. Recently the Company has embarked upon a considerable scheme of extensions, these involving the impounding of a fourth lake at Kundley, near Lonavla, the duplication of the pipeline and the installation of additional machinery at the power house at Khopoli.

Investigations undertaken by Mr. H. P. Gibbs, with a view to further developing the electrical supply led to the discovery of a highly promising water storage site in the valley of the Andhra River, situated near the present lakes previously overlooked, as altogether different treatment and design were required. In this instance the draw-off point is 13 miles upstream from the dam and at a level 112 ft. above the lowest river bed level at the dam. The water is taken through a tunnel 8,700 ft. long driven in solid trap rock through the scarp of the ghats of which the pressure pipes are an extension. Seventy feet of the upper water in the lake can be drawn off comprising 75 per cent. of the total amount of water stored, both above and below draw-off

for it. A company entitled The Tata Power Co., Ltd., was floated in the autumn of 1919.

A lake having an area of sixteen square miles and a catchment area of 112 square miles has been formed at Mulshi by the erection of a masonry dam 4,100 feet in length and 158 feet in height. At the end of the lake opposite to the site of the dam, a tunnel has been cut through the Western Ghats to a total length of 14,500 feet, at the further end of which the water enters the pipe line and descends to the turbine power house at Bhira, 1,760 feet below. The head of water is sufficient to generate 150,000 electrical horse-power at 11,000 volts and after being transformed up to 110,000 volts the current is transmitted to the receiving station at Dharevi, Bombay, through an overhead line approximately 80 miles in length. Five generating units each of 30,000 electrical horse power are being erected, and of these two are already in commercial operation. The power will be absorbed by mills, factories and local area not yet electrified in Bombay and suburbs as well as by the B. B. & C. I. Railway's suburban service, the G. I. P. Railway's electrified service within thirty miles of Bombay and the evergrowing needs of the B. E. S. & T. Company.

Nearly 100 miles southward of this Momen Tata propose to erect two dams in the huge valley of the Koyan river, proposed by Mr. A. T. Arnall and developable on lines similar to the two projects by Mr. Gibbs above mentioned, partly to supply power to Bombay and partly to develop a great assembly of electro-chemical industries near the power installation. The preliminary investigations for this scheme are still proceeding. The catchment area for the lake will be 346 square miles and there will be a total storage after the rains of 112,500 million cubic feet, which will be sufficient to supply a normal load of 350,000 horse power for 8,000 hours per year. The preliminary estimates provided for a capital of Rs. 810 lakhs to carry out the scheme.

Mysore Installation.

The first hydro-electric scheme undertaken in India or, indeed, in the East, was that on the River Cauvery, in Mysore State, which was inaugurated, with generating works at Srivasamudram, in 1905. The Cauvery rises in the British district of Coorg, and flows right across Mysore. The first object with which the installation was undertaken was the supply of power to the goldfields at Kolar. These are 92 miles distant from Srivasamudram and for a long time this was the longest electrical power transmission line in the world. Current is also sent to Bangalore, 69 miles away, where it is used for both industrial and lighting purposes.

The initial undertaking has constantly been expanded since its inauguration, so that its total capacity, which was at first 6,000 horse power, is now approximately 25,000 h.p. This is the maximum obtainable with the water which the Cauvery affords and, therefore, with the number of consumers, large and small, rapidly increasing, the necessity of a completely new installation elsewhere, to be operated in parallel with or separately from that at Srivasamudram, has been recognised. Two projects offer themselves. The first would involve the use of the River Shimsha, a tributary of the Cauvery which has natural falls, and the second, known as the Mekadatu project, would have its power house on the Cauvery, 25 miles down-river from Srivasamudram and just within the borders of Mysore State, adjacent to the Madras Presidency. The head of water available at Srivasamudram is 400 feet, that on the Shimsha 618 feet net, which would generate 29,500 h.p. At Mekadatu the Cauvery runs in rapids and a dam and a channel 20,000 feet long with a 25½ feet bed would be necessary. There would be three generating units, each giving an output of 4,000 e. h. p. Future extensions yielding an additional 8,000 h. p. could be made. The progressive spirit which has marked the management of the works since their inception now characterises the manner in which the problem of further extensions are being considered.

Works in Kashmir

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed a few years ago by the Kashmir Durbar, utilising the River Jhelum, near Baramulla, which lies thirty-four miles north-west of Srinagar. The head works of the Jhelum power installation are situated six and a half miles from the power house and the main connection between the two is a great timber trestle. These works and the forebay at the delivery end of the trestle have a capacity for carrying water sufficient for the generation of 20,000 electrical horse power. Four pipes 800 feet long lead from the forebay to the power house, and from forebay to water-wheel there is an effective head of 594 feet. There are four vertical waterwheels, each coupled on the same shaft to a 1,000 k.w., 3-phase, 2,300 volt, 25-period generator running at 560 r.p.m., and each unit is capable of taking

a 25 per cent overload, which the generator and is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 k.w. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation, but these operations have temporarily been curtailed, so that only one dredger is now in operation. The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly increase and that a small demand for power will soon spring up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but for heating. The greater part of Srinagar city is now electrically lighted and during the past year a motor load of over 100 k.w. has been connected with the mains, motors being hired out to consumers by the Electrical Department. This step was taken with a view to educating the people in the use of electric power and it has been entirely successful.

Recent Progress

Apart from the development of the three projects in the Bombay Presidency the past few years have witnessed comparatively little progress in hydro-electric works. Construction is proceeding, however, on the Mandi Project in the Punjab which will utilise the water of the Uhl River for the generation of Power with which a large number of towns in that province will be electrified. The scheme has been formulated in three stages. The first will develop 48,000 horse-power from the ordinary discharge of the river; the second involves the formation of a storage reservoir by the construction of a dam and would double the electrical output, whilst the third would utilise the same water several miles down-stream and provide an additional 64,000 horse-power. Only the first stage is at present being constructed. A small plant was completed and put into operation at Nandi Tal during 1923, and the erection of another small plant was commenced at Shillong, but otherwise there is nothing to record. It is interesting to note, however, that preliminary investigations are proceeding with a view to the erection of hydro-electric plants in various parts of India. In the tea districts of Kalimpong and Kurseong, for example, it is proposed to harness a promising water-power site and to supply current to an important area in which are situated more than two hundred tea factories.

The Sutlej Hydro-Electric Project, at one time appeared to be one of the most promising propositions in the country, but owing to financial considerations it has now been indefinitely shelved. In Southern India a large number of sites have been investigated, and of these one on the Piyara river in the Nilgiris and another on the Kallar river on the borders of Travancore have been selected for develop-

ment if and when the financial considerations can be satisfactorily settled. The Eykani river scheme is of some magnitude, and it is estimated that upwards of 50,000 horse-power will be available for electro-chemical industries which it is proposed to establish at Oskut on the West Coast. The Kallar river project is very much smaller, but it is interesting in being a scheme in which the Government of Madras and the Travancore Darbar will be jointly responsible, for the power house will be located on the British side of the river and the current transmitted to and distributed in Travancore State. Finally, there is a big combined project of hydro-electricification and irrigation in Hyderabad State. This scheme is still very much in the air, but the fact that it is under consideration is worthy of being placed on record in view of the somewhat unusual circumstances in India, that the tail water from the turbines will be made available for agricultural purposes and not allowed to run to waste.

The fact that the Bombay Electric Supply and Tramways Company has shut down its steam-driven generating plant and now takes its supply in bulk from the various Tata companies has been recorded above, and it is of more than passing interest to note that the Poona Electric Supply Company has recently adopted a similar course. This is a phase of hydro-electric distribution which is quite in its infancy in India, but it is possible to foresee the time when every village within a couple of hundred miles of a hydro-electric power station will receive its supply of electric current in bulk, thus greatly reducing capital and administrative charges and minimising the price of current to the consumer. It is a system which has become some thing of a fine art in California, where current is transmitted by overhead wires for many hundreds of miles at a pressure of 200,000 volts, or double the pressure commonly employed in India for overhead long-distance transmission.

Local Self-Government.

No field of the administration of India is likely to be more profoundly affected by the Reforms of 1919 than local government. This is one of the subjects transferred to Indian ministers, and there are many signs that the power will be freely used for the purpose of experiments in the direction of building up stronger and more vigorous local bodies. On the whole, the progress of local government in India for the past quarter of a century has been disappointing. The greatest successes have been won in the Presidency towns, and particularly by the Municipality of Bombay. The difficulties in the way of progress were manifold. Local government had to be a creation—the devolution of authority from the Government to the local body, and that to a people who for centuries had been accustomed to autocratic administration. Again, the powers entrusted to local bodies were insignificant and the financial support was small. There are however many indications that the dry bones of the movement are stirring, inasmuch as this being a transferred subject it is entirely provincial there will be the widest variation between province and province according to the special needs of each. We can indicate here only the broad tendencies, with the expression of opinion that this field will be one of the most important in the growth of nation-building forces in British India.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative entities—*tahsils*, sub-divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood-cutting. The inhabitants of such a village pass their life in the midst of these simple surroundings welded together in a little community with its own organisation and government, which differs in character in the various types of villages, its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, & *q*, in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the population living in small collections of houses or in separate homesteads."—(*Quarterly Review*.)

The villages above described fall under two main classes, viz.—

Types of Villages.—(1) The 'severalty' or *patrilocal* village which is the prevalent form

outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers though some of the non-cultivated lands may be set apart for a common purpose, such as grazing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government vests in a hereditary headman, known by an old vernacular name, such as *paisa* or *reddi*, who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled.

"(2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab and the Frontier Provinces. Here the revenue was formerly assessed on the village as a whole its incidence being distributed by the body of superior proprietors, and a certain amount of collective responsibility still, as a rule, remains. The village site is owned by the proprietary body, who allow residences to the tenants, artisans, traders and others. The waste land is allotted to the village, and, if wanted for cultivation, is partitioned among the shareholders. The village government was originally by the *panchayat* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities, but the artificial character of this appointment, as compared with that which obtains in a *raiyatwari* village is evidenced by the title of its holder, which is generally *landholder*, a vernacular derivative from the English word *number*. It is this type of village to which the well-known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants or labourers under them."

Village Autonomy.—The Indian villages formerly possessed a large degree of local autonomy, since the native dynasties and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenue, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the increase of communications, the growth of individualism, and the operation of the individual *raiyatwari* system, which is extending even in the north of India. Nevertheless, the village remains the first unit of administration, the principal village functionaries—the headman, the accountant, and the village watchman—are largely utilised and paid by Government, and there is still a certain amount of common village feeling and interests.

Panchayats.—For some years there was an active propaganda in favour of reviving the village council-tribunal, or *Panchayat* and the Decentralisation Commission of 1908 made the following special recommendations:—

"While, therefore, we desire the development of a *panchayat* system, and consider that the objections urged thereto are far from insur-

mountable we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any uniform and definite method of procedure. We think that a commencement should be made by giving certain limited powers to *Panchayats* in those villages in which circumstances are most favourable by reason of homogeneity, natural intelligence, and freedom from internal feuds. These powers might be increased gradually as results warrant, and with success here, it will become easier to apply the system in other villages. Such a policy, which must be the work of many years will require great care and discretion, much patience and judicious discrimination between the circumstances of different villages and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is, however still mainly a question of future possibilities and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. Various measures have been passed, but it is too early to say what life they have. The Punjab Government has passed a Village Panchayat Act, which enables Government to establish in a village, a system of conciliation to whom certain local matters, including judicial power, both civil and criminal of a minor character, may be assigned. In Bihar a Village Administration Act has been passed for the administration of village affairs by villagers themselves including minor civil and criminal cases. Other Governments are taking steps in the same direction.

Municipalities.—The Presidency towns had some form of Municipal administration first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1848. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical charity, and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended to the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and

responsibility were conferred on the committees of village *panchs* by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some States of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day.

The Present Position.—There are some 757 Municipalities in British India, with something over 18 million people resident within their limits. Of these municipalities, roughly 687 have a population of less than 50,000 persons and the remainder a population of 50,000 and over. As compared with the total population of particular provinces, the proportion resident within municipal limits is largest in Bombay, where it amounts to 30 per cent, and is smallest in Assam where it amounts to only 2 per cent. In other provinces it varies from 4 to 9 per cent. of the total population. Turning to the composition of the Municipalities, considerably more than half of the total members are elected and there is a steady tendency to increase this proportion. Ex-officio members are only 7 per cent and nominated 26 per cent. Elected members are almost everywhere in a majority. Taking all municipalities together, the non-officials outnumber the officials by nearly six to one. The functions of municipalities are classed under the heads of Public Safety, Health, Convenience and Instruction. For the discharge of these responsibilities, there is a municipal income of Rs. 14.08 crores derived principally from taxation, just over one-third coming from municipal property, contributions from provincial revenues and miscellaneous sources. Generally speaking, the income of municipalities is small, the four cities of Calcutta, Bombay, Madras and Rangoon together providing nearly 40 per cent of the total. The heaviest items of this expenditure come under the heads of "Conservancy" and "Public Works" which amount to 15 per cent and 14 per cent respectively, "Water-supply" comes to 18 per cent., "Drainage" to 8 per cent and "Education" to no more than 8 per cent. In some localities the expenditure on education is considerably in excess of the average. In the Bombay Presidency, excluding Bombay City, for example, the expenditure on education amounts to more than 21 per cent. of the total funds, while in the Central Provinces and Berar it is over 17 per cent.

District Boards.—The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to district and local Boards. In almost every district of British India save in the province of Assam, there is a board subordinate to which are two or more sub-district boards, while in Bengal, Madras and Bihar and Orissa, there are also Union Committees. Throughout India at large there are some 221 district boards with 564 sub-district boards and more than 800 Union Committees. This machinery has jurisdiction over a population which was some 218 millions in 1919-20. Leaving aside the Union Committees the

members of the Boards numbered a little over 14,500 in 1923-24, of whom 62 per cent. were elected. As in the case of municipalities the tendency has been throughout India to increase the elected members at the expense of the nominated and the official members. The Boards are practically manned by Indians, who constitute 96 per cent. of the whole membership. Only 11 per cent of the total members of all boards are officials of any kind. The total income of the Boards in 1923 amounted to Rs. 11.42 crores, the average income of each district board being Rs. 5,00,000. The most important item of revenue is provincial rates, which represent a proportion of the total income varying from 25 per cent. in Bombay and in the N. W. F. Province to 63 per cent. in Bihar and Orissa. The principal objects of expenditure are education which has come remarkably to the front within the last three years and civil works such as roads and bridges. Medical relief is also sharing with education though in a less degree the lion's share of the available revenue.

Improvement Trusts.—A notable feature in the recent sanitary history of India is the activity played by the great cities in the direction of social improvements. In Bombay and Calcutta the Improvement Trusts are continuing their activities which are described in a separate chapter (q.v.). In Bombay the work of the Improvement Trust is being developed by the Bombay Development Directorate. Other cities are beginning to follow the examples of these great cities and Improvement Trusts have been constituted in Cawnpore, Lucknow and Allahabad in the United Provinces and in several of the larger cities of the Provinces of India. Their activities have, however, been severely curtailed by the financial stress.

Provincial Progress.—There was passed in Bengal in 1919 a Village Self Government Act embodying the policy of constituting Union Boards at the earliest possible date for groups of villages throughout the province. The number of these boards continues to increase, rising from 1,560 to more than 2,000. Though they are in their infancy as yet, many of them show a remarkable aptitude for managing their own affairs.

In Bombay the development of village self government is also proceeding, as the result of an Act for constituting, or increasing the power of village committees, which was passed in 1920 by the Legislative Council. In this Presidency, some 78 out of 157 municipalities had, a two-thirds elected majority of councillors in the year 1920, and a distinct step forward has been effected by the administration in the direction of liberalising the constitution of all municipal bodies. The policy of appointing a non-official president has been extended both to district and sub-district boards, and a large number of non-officials have also been appointed presidents of sub-districts (*tahsils*) boards. In Madras also the institutions of local self-government continued to progress in an encouraging manner. The number of district boards in the Presidency was 24, with 683 members. The number of sub-district boards rose from 119 to 121. The total number of Municipal Councils rose from 72 to 80 and the proportion of Indian

to European and Anglo-Indian members further increased. In 1920-21 there were 54 municipal councils, consisting entirely of Indian members, as against 41 in the previous year. The average imposition of taxation per head of population is still very low, being only about Rs. 2. Nonetheless, 28 towns in the present year possess a protected water-supply and water works schemes are either under execution or in contemplation in a number of others. The number of educational institutions maintained by municipal councils rose to 1,016 which was 96 more than in the previous year, while the net educational charges amounted to Rs. 12-61 lakhs.

In the *United Provinces* the new District Boards, which consist of non-official members only with elected non-official Chairmen, were plunged straight-way into financial difficulties. In some cases the necessity for retrenchment was immediate resulting in the curtailment of medical relief and of allotments for the ordinary repairs of roads. Additional taxation has so far not been generally imposed and the Boards are still suffering from inexperience in husbanding public money and obtaining the full value for their expenditure. In the case of Municipal Finances, there has been some change for the better. The new Municipalities have shown a great interest in all forms of civic activity but they are still hampered in their work by political and communal obsessions. They are reluctant to impose new taxation but a considerable programme of expenditure lies before them. The restoration of municipal roads, the abatement of the dust nuisance and the renewal of water works plant are problems calling almost everywhere for immediate solution. On the whole, the position is more hopeful since the rapid progress which was being made towards Municipal insolvency has been arrested.

In the *Punjab* municipal administration continued to show improvement the general attitude of the members in regard to their responsibilities being promising for progress in the future. Generally speaking the finances are in a more satisfactory position than was the case in previous

years. Expenditure on water-supply schemes is steadily increasing and the capital cost of schemes executed during 1924-25 amounted to over Rs. 21 lakhs as compared with Rs. 11 lakhs in the previous year.

Three Acts of considerable importance, providing for the creation of improvement trusts, for the more effective administration of smaller towns and for the establishment of village panchayats have been passed. Further, Municipalities and District Boards have been reconstituted in a more democratic form.

In the *Central Provinces*, the year 1920 witnessed the passing of a Local Self-Government Act which will guide into proper channels the undoubtedly growing interest in public matters. The continued reduction of official members and chairman, and the wider powers of control given to local bodies will be an incentive to the development of local self government, leading to an increased sense of public duty and responsibility. Another very important measure regulating municipalities was passed into law in 1922. Its chief features are the extension of the Municipal franchise, the reduction of official and nominated members, the extension of the powers of Municipal Committees and the relaxation of official control.

In the *North-West Frontier Provinces*, the institution of local self government is somewhat of a foreign growth. Certain of the municipal committees are still lax in the discharge of the responsibilities and meetings are reported to be infrequent, but the attendance of non-official members is gradually increasing. Concerning Municipal administration the Local Government reports that the members continue to take a very great interest in their duties and that their attitude towards the responsibility imposed upon them is on the whole satisfactory. Communal feeling shows itself in certain localities, but is in many instances offset by the public spirit and initiative of individual members and there are considerable symptoms of advance in independence of action and in the smooth working of the Committees.

Local Government Statistics.

26 municipalities.—With this general introduction we can now turn to the statistical results of the working of Local Self-Government. The following table gives information as to the constitution of municipal committees, taxation, &c., in the chief provinces in 1928-29.

Province.	Population within Municipal Limits.	Number of Members of Committees.	Classification of Members		Income.	Incidents per Head of Population		Expenditure.
			Official.	Non Official.		Rates and Taxes.	Total Income (including Loans and Debt.)

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and housing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1899, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or by 25 per cent., by 1901. The corresponding figure according to the 1911 Census was 896,067 and this had increased by 1921 to 993,508.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lake.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a large expenditure on improvement schemes and the provision of open spaces and for special local taxation to this end. It also provided for the appointment of a whole-time chairman of the Board of Trustees and the membership of the Trust was fixed at eleven.

The following constituted the Board of Trustees at 31st March 1930.—Mr J. A. L. Swan, C.I.E., L.C.S., Chairman; Mr S. W. Goode, C.I.E., I.C.S., Chairman (offg.); Mr J. C. Mukherjee, Bar-at-Law, Chief Executive Officer; Calcutta Corporation (*ex-officio*); Mr D. J. Cohen, elected by the Corporation of Calcutta under Section 7 (1) (a) of the Calcutta Improvement Act, 1911; Mr Prabhudyal Himatsingh, elected by the elected councillors, Corporation of Calcutta, under Section 7 (1) (b) of the Calcutta Improvement Act, 1911 as modified by the Amendment Act of 1926; Mr Charu Chandra Bhawan, elected by Councillors other than elected Councillors of the Corporation of Calcutta under Section 7 (1) (c) of the Calcutta Improvement Act, 1911, as modified by the Amendment Act of 1926; Mr G. Morgan, C.I.E., elected by the Bengal Chamber of Commerce; Mr Hari Shankar Paul, Kt., elected by the Bengal National Chamber of Commerce; Mr W. H. Thompson, C.I.E.; Mr Usaid Doss; Rai Badridas Goenka Bahadur, C.I.E.; Lt. Col. Prasad Singh Roy, appointed by the Local Government.

During the 18 years that it has now been at work, the Trust have decided, and partly or entirely carried through, several improvement

schemes for opening up congested areas, laying out or widening streets and providing open spaces.

In Central Calcutta many highly insanitary *bastees* have been done away with and several roads of an improved type laid out, the most important of which is the Chittaranjan Avenue, 100 ft wide which at present extends from Brandon Street to Chowringhee, and will shortly be extended to Shambazar Street on the north. The section of this road near the Chowringhee end is well placed for commerce and trade and is likely before long to gain increased importance by being linked up with Dalhousie Square by means of a new road 84 feet wide, which the Trust proposes to construct between Mission Row and Mangoe Lane.

In the north of the City, two large and thirteen small parks have been constructed in different quarters. Of the two large parks one is named Chittaranjan Park and the other Cosipore-Chitpore. Open space measuring 53 bighas and 108 bighas respectively. The Cosipore-Chitpore Park has a small artificial lake and the 15 out of the area surrounding the lake has been taken in hand. Four football grounds have been provided for schools and clubs of North Calcutta. Some tennis courts are also being made. The Chittaranjan Park has also been provided with play grounds. Several wide roads have been driven through this highly congested area. The approaches to the City have also been adequately widened. Some progress has also been made with that highly congested area to the West of the City by opening up new roads and widening the existing ones. This scheme is known as Maydapatil, Scheme No. XXVII.

The most important work which the Trust has in hand at present is the construction of the main east and west thoroughfare 84 feet wide, across the centre of the city between Maniktala and Strand Road. The portion between Upper Circular Road and Central Avenue has been completed as also the section of this thoroughfare between Central Avenue and Upper Chitpore Road. The construction of the big storm water relief sewer which will drain an area of about 163 acres between Central Avenue and Strand Road has been completed in the sections between Central Avenue and Upper Chitpore Road. Scheme No. VIII provides for the last section of this main road, from Upper Chitpore Road to Strand Road.

The Suburban Areas to the South and South-East of Calcutta required greater attention and extensive development schemes were undertaken. Several open spaces and squares have been made in various parts. Insanitary tanks requiring approximately 2 crores C. ft. of earth have been filled up. Russa Road which forms the southern approach to the town has been widened to 150 ft for a length of one mile and 100 ft for a length of another mile. It now gives a most pleasant drive from Chowringhee to Tollygunge. To improve the drainage of this area a 100 ft. wide East to West road, from Ballygunge Railway Station to Ghatal,

Bridge, and for recreation an artificial lake of 187 bighas with adequate grounds has been completed.

Another small lake has also been completed and a road is being constructed round it to link up with the road surrounding the main lake. The road round the main lake has been surfaced with asphalt and lighted with electricity and is much frequented in the evenings. Sites for Club houses adjoining the main lake have been allotted to several clubs. Excavation has been continued in a new section of the lake which is to be attractively laid out with an island to which the public will have access by means of a footbridge. The Calcutta Tramways Co. Ltd. have now extended tram tracks from Russa Road along New Sewer Road to Daily gauge Station.

The Board of Trustees have framed a scheme for the extension southwards of Lansdown Road which has received Government sanction and steps are being taken for the acquisition of land. The Board has also framed a scheme known as Scheme No. XXXIII for the improvement of another section of the undeveloped area between Russa Road and the Lake District. This is pending sanction of Government.

To the east of the city several new roads have been constructed in Scheme No. VIII (New Ballygunge Road Park Circus to old Ballygunge Road). They are now open to traffic and the majority of them are surfaced with asphalt. Arrangements have been made for lighting the roads with electricity. The development of Calcutta east of Lower Circular Road, between Park Circus and Middle Road, is a pressing need, but the work can only proceed slowly in small sections. The Trust in the execution of this scheme cannot ignore the bustee dwellers who are pushed further east as the development from bustee conditions to blocks of masonry buildings proceeds. The utilisation of highly improved lands for bustee purposes is not an economic proposition but at the same time, it is necessary to provide the essentials of sanitation for the working class.

The linking up of Amberst Street with Loudon Street by a broad thoroughfare has commenced. The Trust is constructing a large park near Park Circus, Scheme No. VIII, known as Eastern Park, measuring 66 bighas. It will have a large playing field for football and tennis.

The public squares vested in the Calcutta Corporation in 1911 had a total area of about 96 acres. In 1912 Mr. Bompas the first Chairman of the Trust pointed out that in the ratio of about 9 per cent of its public open spaces which measured about 1,250 acres (including the Maidan, the Horticultural and the Zoological Gardens) to its total acreage Calcutta was almost on a par at that time with London possessing 6,675 acres of public parks or gardens while its percentage exceeded that of New York, Berlin and Birmingham. But about 1,000 acres of Calcutta's 1,250 was accounted for in the Maidan and new open spaces in other parts of Calcutta were an urgent need. Up to date the Trust had added (including the new lake at Dhakuria)—another 250 acres.

Lastly for the housing of the displaced population the Trust has undertaken on a large scale the following scheme:—

In the early stages three blocks of three storied tenement buildings containing 253 lettable rooms were built in Wards Institution Street for persons of the poorer classes. It was found, however, that the persons displaced preferred to take their compensation and migrate to some place where they could erect huts of their own, the class of structures they were accustomed to live in. These chawls were then filled with persons of limited means, e.g. School Masters, poor Students, Clerks and persons of the artisan class. As many as 1,200 people are housed in these chawls, these buildings including land, cost Rs. 2,44,368 and are let at very low rents—ground floor rooms at Rs. 5 per mensem and top floor rooms at Rs. 6 per mensem each room measuring 12 x 12 with a 4 ft verandah in front opening on to a central passage 7 ft wide. The total collection of rent during 1929-30 was 16,030.

As these chawls failed to attract the people for whom they were meant, the Board next tried an experiment in providing sites for bustees. Two sites with a lettable area of 16 bighas were acquired within the area of Maniktila Municipality, but they failed to attract because they were out of the way and were expensive.

KERBALA TANK LAMP RE-HOUSING SCHEME.—In this scheme 4 detached and 85 semi-detached houses were built. The detached houses were sold as this scheme never became popular with the class of tenants for whom they were originally intended. Owing to this unpopularity the Board further decided to throw open to tenants of all classes 18 out of the remaining 35 semi-detached houses. This change of policy however, produced no effect on the letting.

Owing to want of suitable tenants for the entire dwellings in Kerbala Tank Re-housing scheme had been sold by private sale shortly after the 31st March 1927.

BOW STREET RE-HOUSING SCHEME.—Seven blocks of buildings containing one roomed, two-roomed and three roomed suites have been constructed to re-house Anglo Indians displaced by the operations of the Trust. This scheme has proved a striking success. There are 132 suites for letting and the rent received from these suites during the year 1929-30, amounted to Rs. 38,636.

PAIKPARA RE-HOUSING SCHEME.—This scheme has an area of 36 bighas well laid out in 96 building sites. Further re-housing scheme has not been undertaken by the Trust but special facilities are offered to dislodged persons for securing land in various improved areas for reinstatement purposes.

BRIDGES.—Some progress has been made in replacing the old bridges of Calcutta, which is hemmed in by canals and railway lines inadequately bridged, by modern and up-to-date bridges to suit the growing traffic requirements. The opportunity is being taken of widening the Maniktila, Markandeya and Ballygunge Bridge approaches on both sides—on the west (in the case of Maniktila and Markandeya Bridges) right up to Circular Road. The new bridges of the city will in their traffic capacity compare favourably with those of London. The new Bridges at Maniktila, Ballygunge and at

Chandbazar have roadways of 37 feet, with two footpaths each 10 feet in width. The Chitpore Bridge for which estimates amounting to Rs. 64,000 have been sanctioned is to have the same traffic capacity as the new Kidderpore Bridge, viz. a roadway aggregating 60 feet in width with two footpaths each 10 feet wide. The Alipore Bridge, the reconstruction of which will shortly be taken in hand is to have a roadway of 30 feet (3 traffic widths) and 2 footpaths of 8 feet each and these are also to be the probable widths of the Tollgunge and Hastings Bridges which need re building. The Chelsea Hammermith and Waterloo Bridges have all over widths of 40.39 and 42 feet, respectively the roadways being 29.27 and 28 feet that is 3 traffic widths. Even London Bridge with an all-over width of 45 feet has only a 37 foot roadway (4 traffic widths) and Westminster Bridge which is 84

feet in width spans only 54 feet (i.e. 6 traffic widths like the 80 feet of Kidderpore Bridge for wheeled traffic.

FINANCIAL—Capital charges during the year 1929-30 amounted to Rs. 78 lakhs which included Rs. 65.32 lakhs spent on land acquisition and Rs. 10.21 lakhs on engineering works. A debenture loan of Rs. 2.5 lakhs was raised. The gross expenditure of the Trust on Capital Works up to the end of the year 1929-30 was Rs. 11,64,94,750. To meet this large expenditure the Trust has borrowed Rs. 2,98,50,000 other Capital receipts (mainly from the sale of land and buildings) have yielded Rs. 8,48,93,918 and the revenue fund from its annual surplus (after providing for the service of loans) has contributed nearly Rs. 3 crores to Capital Works.

BOMBAY IMPROVEMENT TRUST

The transfer of the Trust to the Municipality has been effected by an Act of Legislature called The City of Bombay Improvement Trust Transfer Act, 1925 (Bombay Act No. XVI of 1925). By virtue of this Act the powers and duties of the Trustees for the Improvement of the City of Bombay have been transferred and the property and rights belonging to the said Trustees have now been vested in the Municipal Corporation for the City of Bombay which is referred to as the Board, the President of the Corporation being also the President of the Board.

The execution of the powers and the performance of the duties vested in the Board is entrusted to a committee called the Improvements Committee subject to the general control of the Board. The Improvements Committee consists of eighteen members, that is to say fourteen elected members and four nominated members. Of the elected members eleven are elected by the Board, one by the Bombay Chamber of Commerce, one by Indian Merchants' Association and one by the Millowners' Association out of their own bodies respectively. The nominated members are appointed by Government by notification, three of them being chosen from among the following—

- (i) The Director of Development, Bombay
- (ii) The Chairman of the Bombay Port Trust
- (iii) the Collector of Bombay, and
- (iv) the Executive Engineer, Presidency District

and the fourth by Government to represent labour from among the members of the Board.

The Municipal Commissioner has the right of being present at a meeting of the Committee and of taking part in the discussions thereat but he shall not vote upon or make any proposition at the meeting. The Chief Officer, who is the Chief Executive Officer, is appointed by the Board subject to confirmation of Government. He has the same right of being present at a meeting of the Board and of the Committee and of taking part in the discussions thereat as a member of the said Board or Committee, but he

must not vote upon or make any proposition at such meeting. He exercises general supervision and control over the acts and proceedings of all officers and servants of the Board in matters of executive administration and is directly responsible to the Board.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, construct sanitary dwellings (including those required for the Bombay City Police). The Trust derives its income from certain Government and Municipal lands vested in the Trust and the schemes it has undertaken. The Trust receives a contribution from Municipal revenues amounting to a definite share in the general tax receipts—approximating to 2 per cent on assessments and subject to no maximum. Works are financed out of loans raised by the Board. By the close of 1929-30 the Board had raised Rs. 16.19 lakhs by loans and their total capital receipts (including grants of Rs. 54 lakhs received from Government) amounted to Rs. 18.84 lakhs out of which they had spent Rs. 12.4 lakhs on the improvement of Government and Municipal lands temporarily vested in the Trust and Rs. 16.77 lakhs on their acquired estates and office buildings. The Trust have provided in their ghawls accommodation for 4,000 persons.

The present Chairman and members of the Improvements Committee are as follows—

Mr Jafferbhoy Abdoolabhoi Laljee, *Chairman*.

Mr O W E Arbuthnot, C.I.E., B.A. (R.F. 1), J.P.

A. F. Bahavala, B.A. Bar-at-Law

Dr J. A. Collaco, L.M. & S.

Capt J. Alban DeSouza, B.A., L.M. & S., I.M.S., M.L.O.

Mr J. W. Smyth, I.C.S.

Mr E. B. Rihlabhedra, J.P.

Mr Gordhandas G. Moraji

Mr Hoosenally M. Rahimtoola, B.A.

Mr K. F. Nariman, B.A., L.L.B.

Mr Mahomed Umer Hajab
 Mr Manu Subedar, B.A., B.Sc. (Econ),
 Bar-at Law
 Mr Mohanlal M. Desai B.A., LL.B.
 Dr Moreahwar Chintaman Javie, J.P.
 Mr W H Neilson O.B.E., V.D. M.I.C.E.
 M.I. Mech. E., J.P.
 Sir V. S. Anand Rao Dabholkar, Kt.,
 O.B.E., M.L.C., J.P.
 Mr Y G Pandit
 Municipal Commissioner—Mr A B Dalal,
 M.A., J.C.S. J.P.

Chief Officer—Mr H. B. Shrivastava, M.A.
 (Cantab)

Chief Accountant—Mr Narayan T Chawdhary
 Estate Agent—Mr H. G. Mhatte, L.C.W.,
 A.M.I.E.

Senior Assistant Engineer—Mr D. K. Baria
 L.C.E.

Trust Architect—Mr M. Framjee, L.R.I.B.A.,
 F.I.A.A., A.M.I.E., L.C.D.

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi, Singapore and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

The income, expenditure and capital debt according to the latest figures obtainable from the Department of Commercial Intelligence and Statistics (India) of the six principal ports

managed by Trusts (Adon is excluded from the tables) are shown in the following table—

	Income.	Expenditure.	Capital Debt
	Rs	Rs	Rs
Calcutta	3,21,27,748	3,10,44,101	17,76,81,194
Bombay	2,97,27,130	2,90,16,859	22,60,68,465
Madras	26,12,361	30,85,982	1,41,14,721
Karachi	66,02,570	64,01,813	4,85,24,000
Rangoon	86,88,622	71,53,776	3,78,90,182
Chittagong	7,24,062	4,67,468	8,68,202

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows—

Mr T H Elderton, Chairman

Mr W A Burns Deputy Chairman and
 Traffic Manager

Elected by the Bengal Chamber of Commerce.—
 Mr C de M Kellock, (Messrs. Gillanders,
 Arbuthnot & Co.) Mr A L B Tucker, (Messrs
 Kilburn & Co.) A McE Ridd, M.L.C. (Messrs
 Gladstone Wyllie & Co.) Mr T W Dowling,
 (Messrs. Turner Morrison & Co.) Mr P H Brown
 O.B.E. (Messrs. Mackinnon Mackenzie & Co.)
 Mr J A Tasse, (Messrs. James, Finlay & Co.)

Elected by the Calcutta Trades Association.—
 Mr J H Wiggett, M.B.E., (Messrs T.E. Thomson
 & Co.)

Elected by the Bengal National Chamber of
 Commerce.—Dr Narendra Nath Law M.A.
 B.L., F.R.S., Ph.D. Mr Jadunath Roy Mr Nalin
 Banjan Sarkar, (The Hindustan Co-operative
 Insurance Society Ltd.)

Elected by the Indian Chamber of Commerce.—
 Mr G L Mehta (The Suddia Steam Navigation
 Co.)

Elected by the Municipal Corporation of
 Calcutta—Mr Sanat Kumar Roy Chowdhury
 M.B.E.

Nominated by Government—Mr V E D
 Jarrad, (Agent, Bengal Nagpur Railway), Mr
 G L Colvin O.B.C.M.D. D.S.O. (Agent, East
 Indian Riv.), Mr N Pearce (Agent Eastern
 Bengal Riv.) Mr M Stude I.C.S. (Collector of
 Customs) Capt H W B Livesey O.B.E., R.N.M.,
 (Principal Officer, Mercantile Marine Dept.,
 Calcutta district)

The principal officers of the Trust are—

Traffic Manager.—Mr W A Burns.

Chief Accountant.—Mr N G Park, C.A.

Chief Engineer—Mr J R. Rowley, A.K.C.,
 M. Inst. C.E.

Deputy Conservator—Commander O V L.
 Norcock, O.B.E., R.N.

Medical Officer.—Lt.-Col. H. B. Steen,
 M.B. (on leave) Lt.-Col. W. L. Harnet
 M.B., F.R.C.S., L.M.S.

Consulting Engineer and London Agent.—Mr
 J. Angus, M. Inst. C.E.

The traffic figures and the income of the Trust for the last fifteen years are as follows —

Year	Docks.			Jetties	Stream		Net tonnage of shipping entering the Port.	Income
	General Exports	Coal Exports	Imports	Imports	Exports	Imports		
	Tons	Tons	Tons	Tons.	Tons	Tons.	Tons	Rs.
1914-15	920,659	2,633,805	700,183	917,978			3,714,344	1,41,20,349

The revenue of the Trust in 1929-30 amounted to Rs 2,91 07 182. The expenditure amounted to Rs 2 76 23 104. The result of the year's working was a surplus of Rs 3 21 093 under General Account which has been transferred to the Revenue Reserve Fund and a surplus of Rs 1 02 983 under Pilots Account. The balance of the Revenue Reserve Fund at the close of the year amounted to Rs 83 54,164. The aggregate capital expenditure during the year was Rs 20,16 690. The total debt of the Trust at the end of the year amounted to Rs 23,21 13 077.

The trade of the Port of Bombay during the last official year aggregated 237 crores in value

The following statement shows the number of steam and square rigged vessels which during recent years have entered the docks or been berthed at the harbour walls and paid dues excluding those which have remained for unloading and loading in the harbour stream—

Year	Number	Tonnage net
1911-12	1,519	2 767,913
1912-13	1 566	2 926 506
1913-14	1 579	3 135 597
1914-15	1,880	4,417 035
1915-16	1,794	3 939,721
1916-17	2 112	5,031 572
1917-18	2 069	4,740,578
1918-19	2,058	4 626 846
1919-20	2,164	4,874,820
1920-21	2,029	4 589 627
1921-22	2 123	4 895 968
1922-23	1,907	4,429 283
1923-24	2,044	4,661,904
1924-25	1,890	4,500,636
1925-26	1,894	4 570,038
1926-27	1,812	4,386,812
1927-28	2,027	4,864,344
1928-29	1,966	4,828,376
1929-30	1,966	4,895,325

The two dry docks were occupied during the year 1929-30 by 169 vessels, the total tonnage amounting to 562,504 tons which was less than the previous year by 98,091 tons

KARACHI.

The members of the Board of Trustees of the Port of Karachi are as follows —

Chairman—J B S Thubron C I E

Appointed by Government—G N Bower B A (Collector of Customs) C C T Breerton M B E (Divisional Superintendent North Western Railway) Major A G Armstrong 8th (K G O) Light Cavalry, I A Mir Ayub Khan, Barrister-at Law

Elected by the Karachi Chamber of Commerce—J R N Graham V C (Graham's Trading Co Ltd) A K G Hogg (Mackinnon Mackenzie & Co) E A Pearson, (Forbes Campbell & Co Ltd) J J Floukhart (Mackinnon Mackenzie & Co) (on leave) E L Price C I E O B M Bar-at-Law (Cooper & Co) (Acting)

Elected by the Karachi Indian Merchants Association—Lokamal Chellaram, Lala Jaswantrao Chauramani, M A

Elected by the Buyers and Shippers Chamber—Janshed N E Mohita, (Vice-Chairman elected by the Board) Haridas Lalji

Elected by the Karachi Municipality—Tikandas Wadhwanji, M A (Oxon) Barrister-at Law

The Principal Officers of the Trust are —

Chief Engineer—W P Shepherd Barron M I E E C E

Deputy Chief Engineer—H A L French, I E E T O E

Chf of Accountant—B A Englet, B A, C A

Traffic Manager—A A L Flynn

Deputy Conservator—J A Scott

Chief Storekeeper—R A Dond

Secretary—L J Maccaenhus

The Revenue receipts and expenditure of the Port of Karachi for the year 1929-30 were as under —

Revenue receipts (excluding the Port Fund Account) Rs 67,41,682 Revenue Expenditure Rs 68,09,800 Deficit Rs 68,118 Reserve Fund Rs 45,10,990

The number of vessels which entered the Port during the year 1929-30 exclusive of vessels put back and fishing boats was 2,808 with a tonnage of 2,603,231 as against 2,960 with a tonnage of 2,677,826 in 1928-29. 937 steamers of all kinds entered the Port with a tonnage of 2,495,730 against 967 and 2,670,117 respectively in the previous year. Of the above, 727 were of British nationality.

Imports landed at the Ship Wharves during the year totalled 645,509 tons against 720,566 tons in the previous year. Total discharges from the Ship Wharves were 425,026 tons in 1929-30 against 660,988 tons in 1928-29.

MADRAS.

The following gentlemen are the Trustees of the Port of Madras —

Officials—G G Armstrong O B E M O V D M I E E T Chairman and Traffic Manager F Buckney (Collector of Customs) and Capt E H Marwood, R I M (Presidency Port Officer)

Non-Officials—(1) Nominated by Government C C Fink P Rothera, O B E M I E E (2) Representing Chamber of Commerce Madras—G W Chambers A S Todd, L D Denniston (3) Representing Southern India Chamber of Commerce Madras—M E Ry Diwan Bahadur Govindas Chathoorboodjados Garu, The Hon'ble Diwan Bahadur G Narayanaswamy Chetty Garu C I E (4) Representing Madras Trades Association—J M. Bmth (5) Representing Southern India Skin and Hide Merchants Association—M B Ry Diwan Bahadur M Balasundaram Naidu Garu (6) Representing Madras Piece goods Merchants Association—K M A Rasheed Sahib

Principal Officers are—Chief Engineer, W Ayte, M I E E C E, M I, Struct M Executive Engineer, G P Alexander, A M I E E C E, Mechanical and Electrical

Engineer, Major E G Bowers, M O M I E E, A I E O, Assistant Mechanical Engineer S W White M I M A E A M I S A, Executive Engineer, Rao Bahadur K Ganapathi Kudwa A V I B A B C M Assistant Engineer, V Dayanada Kamath, B A B M Assistant Engineer, S Nagabushnam B A, M M Assistant Engineer, (Electrical), K Subramania Iyer, M E Grad, I E E, Deputy Traffic Manager, J G Lord, Assistant Traffic Managers F W Stooke and James Chance, Chief Accountant Rao Bahadur S NarayanaIyay, M A, Deputy Chief Accountant, V SundaramanIyay Chetty, Deputy Chief Accountant (Engineering), V Sundaramani Ayer, B A Office Manager, G M Ganapathi Iyer

The receipts of the Trust during the year on Revenue account from all sources were Rs 45,81,021 as against 49,66,974 in 1928-29 and the gross expenditure out of revenue was Rs 45,35,928 of which a sum of Rs. 2,30,000 represents the amount transferred from revenue balances to the credit of certain Reserve funds created in 1923-29. 878 vessels with an aggregate net registered tonnage of 2,061,861 tons, called at the port during the year against last year's figure of 896 vessels with a net registered tonnage of 2,075,028 tons.

RANGOON.

The personnel of the Commissioners for the Port of Rangoon is comprised of seventeen members—

Appointed by Government—J A Cherry, C.I.E. M.L.C. (Chairman) J R D Glascoth C.I.E. (Vice-Chairman) T Cormack Captain F C H Lane R.I.M. (Principal Port Officer) and A B Mallott

Ex-officio—Messrs C F Grant I.C.E. (Chairman) Rangoon Development Trust, A B Bennett (Collector of Customs) and J R D Glascoth, C.I.E., (Agent, Burma Railways)

Elected by the Burma Chamber of Commerce—Messrs M L Burnet C G Wodehouse, The Honble K B Harper (on leave), R B Howison M.L.C. and A A Bruce

Elected by the Rangoon Trades Association—L. A. Heath

Elected by the Chinese Chamber of Commerce—Lee Boon Tin

Elected by the Burma Indian Chamber of Commerce—A Chandoo and B T Thakur

Elected by the Burmese Chamber of Commerce—U Thein Mann, B.A., M.M.F. (on leave) and U Aye Mann

Elected by the Rangoon Municipal Corporation—M M. Ohn Ghine, M.L.C. (on leave) and U Ba Gray

Principal Officers are—

Secretary—C Wicheer

Chief Accountant—D H James, A.C.A.

Chief Engineer—E C Niven, M. Inst., C.E.

Deputy Conservator—H N Gilbert

Traffic Manager—E J B Jeffery

Port Surveyor—Commander C M. L. Scott, R.N. (Retd.)

The income and expenditure on revenue account for the Port of Rangoon in 1929-30 were—

	Rs.
Income	82,10,981
Expenditure	82,74,855

The capital debt of the Port at the end of the year was Rs 5,18,64,842. The balance (including investments at cost) at the credit of the different sinking funds on 31st March 1930 was Rs 1,00,84,052.

The total sea-borne trade of Rangoon during the year 1929-30 was 5,618,732 tons of which 1,725,412 tons were imports, 3,875,892 tons exports and 17,928 tons transshipment. The tonnage of goods passed over the Commissioners' premises during the year amounted to 3,540,218 tons. The total number of steamers (excluding Government vessels) entering the Port was 1,789 with a total net registered tonnage of 4,540,783 being an increase of 82 steamers and 290,404 tons in net tonnage over that of the previous year.

CHITTAGONG

Chittagong in Eastern Bengal, lying on the right bank of the river Karnafuli at a distance of 12 miles from the sea, was already an important Port in the sixteenth century when the Portuguese gave it the name of Porto Grande.

The construction of the Assam Bengal Railway has facilitated the transport of trade with Assam and Eastern Bengal for which the Port of Chittagong is the natural outlet.

The chief exports are tea and jute and imports piece-goods, salt, oil and machinery.

FOREIGN TRADE 1929-30	Rs (in lakhs)
Imports	(a) 205.90
Exports	(b) 664.48
COASTING TRADE 1929-30	
Imports	(c) 811.47
Exports	(d) 110.98

PORT COMMISSIONERS.

Chairman—A. R. Leishman, V.D.

Vice-Chairman—H. E. Wilkinson, C.I.E., I.C.S.

Commissioners—Commander C. R. Binnett, R.I.M., L. R. Lane, E. L. Blise, V.D., I. M. Hooper, J. W. G. Horne, J. Richardson, Lal Mohan Choudhury, Rai Upendra Lal Roy Bahadur, B.L., Sarash Chandra Banerjee, Khan Sahib Abdul Haque Dostah.

Secretary to the Port Commissioners—Commander C. R. Binnett R.I.M.

Port Engineer—F. J. Green, B.Sc., A.M.I.C.E., M.I.E.S., M.I. Struct. E.

Vessels of 25 feet draught can be accommodated during the greater part of the year at four jetties which are fitted with modern equipment and capable of quick despatch.

Two additional jetty berths will shortly be constructed.

Considerable improvement in the depths of the navigable channels of the Karnafuli River has been effected by dredging operations and River training works. Further training works are now being carried out.

VIZAGAPATAM HARBOUR PROJECT

The question of creating a harbour at Vizagapatam to supply an outlet for a large area of fertile country adjacent to the east coast of India hitherto undeveloped, with considerable mineral resources and without suitable access to the outside world, was first formulated by the Bengal Nagpur Railway Company. That the creation of such a port would have a beneficial influence on this area was unquestioned for it is pointed out that Vizagapatam lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats, is formed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications, hitherto available. A necessary complement of the scheme is the construction of the proposed railway from Parvatipuram to Raipur which with the existing coast line of the Bengal Nagpur Railway would make a large and rich area tributary to the proposed port and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Rangoon from Europe by way of Bombay while from an imperial point of view, the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting headland of the Dolphin's Nose would offer facilities for this purpose as well as for protecting the entrance to the port from the effect of south and southwesterly gales.

The Government of India have with the approval of the Secretary of State and the Legislative Assembly sanctioned the construction of the new railway line from Raipur to Parvatipuram and the work is in progress. They have also decided to develop the port of Vizagapatam under their direct control and the port has accordingly been declared to be a Major Port.

The scheme for the construction and development of the harbour will be carried out by progressive stages according to the demands of trade. The first stage which is now in process of construction consists of a wharf containing three deep water steamer berths each of 550 feet in length and dredged to a depth of 80 feet one of which is being equipped for mechanical loading of manganese ore while the other two will be equipped with transit sheds and a passenger waiting room will be provided in the vicinity for the convenience of Rangoon passengers. In continuation of this wharf a lightering berth and deep water moorings for three additional steamers will be provided. A separate deep water berth is being provided on the south side of the creek and separated by the width of the harbour from the produce quays at which oil tankers can berth to discharge their oil by pipes into tanks in a depot.

The estimated cost of the first section is about 300 lakhs and the time required to complete it will depend on the period that dredging and reclamation work will take. It is anticipated however, that it will be possible to berth ships in the new harbour sometime in 1932.

The work is being carried out by a staff of engineers under direct charge of an Engineer-in-Chief who comes under the administrative charge of the Agent Bengal Nagpur Railway who is *ex officio* Administrative Officer for the development scheme. An advisory committee consisting of the above-mentioned officers and representatives of the Local Government, the Vizagapatam port administration and the commercial interests concerned has also been constituted to advise in the development of the harbour.

Excellent progress has been made with the scheme and a considerable area of the inner harbour has already been dredged to a depth of 30 feet and a large area of land has already been reclaimed. The quay wall for the manganese berth and the produce berth is completed. Schemes for sewage and town planning have been prepared in consultation with the Municipality and a malaria survey of the suburban area has been completed. Arrangements have also been made with the Municipality for the supply of water to the harbour area during construction.

In addition to the Suction Dredger a Rock Breaker and Dipper Dredger is at work in the Entrance Channel removing the rock and hard overlay, and a Dragline Dredger for dredging such areas as can be reached from the shore.

Although it is anticipated that the completion of the inner harbour and its approaches to the point where ocean going vessels can be admitted will not be until 1932, it is hoped that a sufficient depth of water will be available over the bar and right up to the quays to permit trade being transferred to the new quays of the inner harbour by the end of 1930. It will then be possible to carry cargo between the quays and steamers lying in the roads by means of lighters and tugs. The effect of this change will be that proper quays, adequate storage and proper railway facilities will be available in place of the meagre facilities now available on the old wharf while the carriage of cargo between steamers and shore will be effected by means of lighters of approximately 50 tons capacity instead of by the present surf boats with a capacity of only 2½ tons per boat. It is therefore apparent that the facilities available for trade during this intermediate stage will be substantially greater than they have been in the past.

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour as the part of a far-sighted race of rulers whose aim has been to guide a people alien in sentiments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. Government, local bodies and private persons of learning have in the past devoted their limited funds to meeting the demands of those who perceived the benefits of education, rather than to cultivating a desire for education where it did not exist. The result is that the structure has become top-heavy. The lower classes are largely illiterate, while the middle classes who constitute the bulk of the *intelligentsia* are in point of numbers at least educated to a pitch equal to that of countries whose economic conditions are more highly developed. As might be expected from this abnormal distribution of education, the form which it has eventually assumed contains corresponding defects. There have however, in recent years been strong movements, leading to the passing of Primary Education Acts in several Provinces in favour of the expansion of primary education among the masses.

The Introduction of Western Learning—In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance."

It was from sources other than Government that the desire for western knowledge arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the enlightened Brahmin, Mohan Roy, to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grew apace. Fifteen years later, the Committee of Public Instruction in Bengal reported

that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach the principles and practice of medical science in strict accordance with the mode adopted in Europe. Many pronounced the failure of the undertaking to be inevitable, for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Ma-dusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of Christian missionaries. The humanitarian spirit, which had been kindled in England by Wesley, Burke and Wilberforce, influenced action also in India. Carey, Marshman and Ward opened the first missionary College at Serampore in 1816 and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras the missionaries had been still earlier in the field, for as early as in 1797 a small group of missionary schools were being directed by Mr Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in 1834.

Lord William Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks the somewhat tardy acceptance by Government of the new policy. Government then determined while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected, still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1835, English was substituted for Persian as the language of the Courts in 1857 and in 1844 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India, and, though the Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them. Fortunately there has been of late a marked appreciation among Muslim leaders of the need of improving the instructional level of their co-religionists, and in many of the provinces of India a great impulse towards educational advance among the Muhammadan community is now noticeable.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instructions were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions.

Such a system as this, placed in all its degrees under efficient inspection, beginning from the humblest elementary institution and ending with the university test of a liberal education would impart life and energy to education in India, and lead to a gradual but steady extension of its benefits to all classes of people. Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The smilling type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis. It did much, through the agency of its Colleges, to develop backward places. It accelerated the conversion of Indians to a zeal for western education, and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy; and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts; they also recommended the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions; they recommended the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction; they hoped that the system of education would rouse the people of India to develop the vast resources of their country, and gradually, but certainly, confer upon them all the advantages which accompany the healthy increase of wealth and commerce. The encouragement of the grant-in-aid system was

advocated to an even greater extent by the Education Commission of 1883, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions. There can be little wonder that, under such a system of neglect and short-sightedness, evils crept in which are now being removed gradually by the establishment of independent Boards of Intermediate Education charged with the administration of the high school and intermediate stages of education.

The Reforms of 1902-4

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities and the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 per cent of the ordinary members of the Senates and to approve the election of the remainder. The Government retained the power of cancelling any appointment, and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction. The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects; but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined so that universities were precluded from any connection with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the smilling system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, in its main features, and set themselves only to improve and to strengthen it.

Recent Developments

Government of India Resolutions on Indian Educational Policy.—The Indian Universities Act of 1904 was followed by two important resolutions of the Government of India on Indian Educational Policy—one in 1904 and the other in 1913. The resolution of 1904 was comprehensive in character and reviewed the state of education in all its departments. The following passage from it summarises the intentions of Government.—The progressive devolution of primary, secondary and collegiate education upon private enterprise and the continuous withdrawal of Government from competition therewith was recommended by the Educational Commission in 1883 and the advice has generally been acted upon. But while accepting this policy the Government of India at the same time recognise the extreme importance of the principle that in each branch of education Government should maintain a limited number of institutions both as models for private enterprise to follow and in order to uphold a high standard of education. In withdrawing from direct management it is further essential that Government should retain a general control, by means of efficient inspection over all public educational institutions. The comprehensive instructions contained in this resolution were followed in the next few years by the assignment to the provinces of large Imperial grants, mainly for University, technical and elementary education. The resolution of 1913 advocated *inter alia* the establishment of additional but smaller Universities of the teaching type. It reaffirmed the policy of reliance on private effort in secondary education. It recommended an increase in the salaries of teachers and an improvement in the amounts of grants-in-aid and it insisted on proper attention being paid to the formation of character in the education given to scholars of all grades. It further discussed the desirability of imparting manual instructions and instruction in hygiene, the necessity for medical inspection, the provision of facilities for research, the need for the staffing of the girl's schools by women teachers and the expansion of facilities for the training of teachers. The policy outlined in 1913 materially accelerated progress in the provinces, but the educational developments foreshadowed were in many cases delayed owing to the effects of the Great War.

Department of Education, Health and Lands of the Government of India.—In 1910 a Department of Education was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Herbert Butler. In 1925, the activities of the Department were widened, in the interests of economy, by absorption in it of the Department of Revenue and Agriculture. The enlarged Department has been designated the Department of Education, Health and Lands. Sir Fazlul Husain and Sir Frank Noyce are the present Member and Secretary, respectively. The Department possesses an educational adviser styled Educational Commissioner.

The present Educational Commissioner is Mr R. Littlehales, C.I.E. M.A.

Calcutta University Commission.—The Report of the Calcutta University Commission was published in August 1919 and in the following January the Government of India issued a Resolution summarising the main features of the Report and the recommendations of the Commissioners.

The Government of India drew special attention to the following points in the Report—

- (i) High schools fail to give that breadth of training which the developments of the country and new avenues of employment demand.
- (ii) The intermediate section of University education should be recognised as part of school education and should be separated from the University organisation.
- (iii) The defects of the present system of affiliated colleges may be mitigated by the establishment of a strong central teaching body, the incorporation of military universities (as occasion arises), a modification of the administrative machinery which will admit of fuller representation of local interests, and supervision of different classes of institutions by several appropriately constituted bodies.

The Commission gave detailed suggestions for the reorganisation of the Calcutta University, for the control of secondary and intermediate education in Bengal and for the establishment of a unitary teaching University in Dacca. These measures concerned only Bengal but it was generally recognised that some of the criticism made by the Commissioners admit of a wider application. Committees were consequently appointed by the Universities of Madras, Bombay, Patna and the Punjab to consider the findings of the Commission. In the United Provinces two committees were appointed, one to prepare a scheme for a unitary teaching University at Lucknow, the second to consider measures for the reorganisation of the Allahabad University and the creation of a Board to control secondary and intermediate education.

In Bengal the first outcome of the Commission's Report was the passing of the Dacca University Act in the Imperial Legislative Council in March 1920 mentioned in detail elsewhere. It is remarkable that the University which appears to have been least affected by the recommendations of the Calcutta University Commission has been the Calcutta University itself. In spite of many discussions and draft proposals by both the University and the Government the organisation of the Calcutta University has remained unaffected.

The Reforms Act.—The Reforms Act of 1919 has altered the conditions of educational administration in India. Education is now a 'transferred' subject in the Governors' provinces and is, in each such Province, under the charge of a Minister. There are, however, some exceptions to this new order of things. The education of Europeans is a 'Provincial reserved' subject, i.e., it is not within the charge

of the Minister of Education, and to the Government of India are still reserved matters relating to Universities like Aligarh, Banaras and Delhi and all such new universities as may be declared by the Governor-General in Council to be central subjects. The Government of India are also in charge of the Chiefs' Colleges and of all institutions maintained by the Governor-General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members or servants.

Administration.—The transfer of Indian education to the charge of a Minister responsible to the Provincial Legislative Council of which he himself is an elected member, has brought the subject directly under popular control in the also major provinces. Generally speaking education excluding European education, is not, however under the charge of a single Minister, certain forms of education have been transferred to the technical departments concerned and come within the purview of the Minister in charge of those departments. In each province the Director of Public Instruction is the administrative head of the Department of Education and acts as adviser to the Education Minister. He controls the inspecting staff and the teaching staff of Government institutions and is generally responsible to the local government for the administration of education. The authority of Government, in controlling the system of public instruction is in part shared with and in part delegated to Universities as regards higher education and to local bodies as regards elementary and vernacular education. In some provinces boards of secondary or of secondary and intermediate education have also been set up and have to some extent relieved the Universities in those provinces of their responsibilities in connection with intermediate education and with entrance to a University course of studies. Institutions under private management are controlled by Government and by local bodies by recognition and by the payment of grants in aid, with the assistance of the inspecting staffs employed by Government and in rarer cases by local bodies.

Educational Services.—Until recently, the educational organisation in India consisted mainly of three services—(i) the Indian Educational Service, (ii) the Provincial Educational Service, and (iii) the Subordinate Educational Service. The Indian Educational Service came into existence as a result of the recommendations made by the Public Services Commission of 1886, and in 1896 the Superior Educational Service in India was constituted with two divisions—the Indian Educational Service staffed by persons recruited in England and the Provincial Educational Service staffed by persons recruited in India. These two divisions were originally considered to be collateral and equal in status though the pay of the European recruit was higher by approximately 50 per cent than the pay of the Indian recruit. Gradually, however, status came to be considered identical with pay and the Provincial Educational Service came to be regarded of inferior status to the Indian Educational Service. Later as a result of the recommendations of the Allington Commission of 1913-16, the Indian Educational Service was formed into a superior educational

service and all posts were thrown open to Indian recruitment. The Provincial Educational Service was simultaneously reorganised and a number of posts, generally with their Indian incumbents were transferred to the superior service. This reorganisation resulted in a considerable Indianisation of the superior educational services in India. It was then laid down that the proportion of Indians in this service should on an average be 50 per cent of the total strength, excluding the posts in Burma.

In 1924, all recruitment to the Indian Educational Service was stopped as a result of the recommendations of the Royal Commission on the superior services in India. The Commission recommended that "for the purposes of local Governments no further recruitment should be made to the all India services which operate in transferred fields. The personnel required for these branches of administration should in future be recruited by local Governments. The Commission further recommended in regard to the question of the future recruitment of Europeans that it will rest entirely with the local Governments to determine the number of Europeans who may in future be recruited. In this matter the discretion of local Government must be unsheltered but we express the hope that Ministers on the one hand will still seek to obtain the co-operation of Europeans in these technical departments and that qualified Europeans on the other hand may be no less willing to take service under local Governments than they were in the past to take service under the Secretary of State. As a result of the acceptance of these recommendations the Indian Educational Service is dying out and with the gradual retirement of its existing members, the history of the service which has had a brief but fine record will be brought to an end. The present organisation of education in the provinces is largely the work of members of this service while in the sphere of higher education it has trained many men of more than ordinary attainments.

The new Provincial Educational Services which will eventually function under provincial control as the superior educational services, are in course of reorganisation and schemes have been approved for several provinces. These schemes vary from province to province, but it may be generally remarked that, while the rates of pay are not uniform, they consist of two main classes—class I into which the existing Indian Educational Services have been merged for the time being and class II which may be said to represent the old Provincial Educational Service.

The existing Provincial and Subordinate Educational Services in the provinces have been affected, more in some provinces than others, by the changes which have taken place since 1919. Communal interests have influenced recruitment, and in some places they have influenced promotions also, in a direction which has not always tended towards service contentment. But these results are the natural consequences of the devolution of control of education and power of recruitment to provincial and local authorities and will for some time continue to affect the efficiency of the Education Departments in the provinces.

Statistical Progress

The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India

(a) STUDENTS.

Year.	In Recognised Institutions			In All Institutions (Recognised and Unrecognised).		
	Males	Girls	Total	Males	Girls	Total
1901-02	3,492,335	393,155	3,886,493	4,077,430	444,470	4,521,900
1906-07	4,164,832	579,648	4,744,480	4,743,604	645,023	5,388,627
1911-12	5,253,065	875,960	6,129,025	5,822,182	952,559	6,774,741
1916-17	6,050,540	1,156,488	7,207,028	6,421,527	1,290,419	7,711,946
1921-22	6,401,434	1,340,862	7,742,296	6,962,979	1,418,422	8,381,401
1926-27	8,777,739	1,751,611	10,529,350	9,315,140	1,842,356	11,157,496
1927-28	9,260,266	1,899,890	11,160,156	9,778,737	1,996,445	11,775,222
1928-29	9,515,109	2,032,888	11,547,997	10,028,066	2,187,753	12,215,819

(b) EXPENDITURE.

Year	Total expenditure on education in British India	
	Public Funds	Total.
	Rs	Rs
1901-02	1,77,03,968	4,01,21,463
1906-07	2,98,84,574	5,59,02,573
1911-12	4,05,22,072	7,85,32,801
1916-17	5,14,80,471	11,28,62,068
1921-22	11,49,61,178	18,87,52,969
1926-27	15,59,23,968	24,58,47,572
1927-28	16,45,80,913	25,82,78,819
1928-29	17,12,24,514	27,07,22,233

In 1927-28, the total expenditure on education in British India amounted to Rs. 27,07,22,233 of which 48.7 per cent. came from Government funds, 14.6 per cent. from Board funds, 21.8 per cent. from fees and 15.4 per cent. from other sources. In spite of this marked advance there is much to be done to make up, as in the last census report the literate population of India was only 72 per thousand males and females per thousand is

The cost per scholar amounted to Rs. 28-7-1 as follows: Govt. funds Rs. 11-8-8, to local funds Rs. 8-5-7, to fees Rs. 5-0-1 and to other sources Rs. 3-8-0.

The following table provides an interesting and valuable comment on the state of education in India 1926-27. Although the statistical returns show more than 11 millions of pupils at school, it will be seen that over 75 per cent. of these are in the lower primary stage, and it may be safely deduced that over 80 per cent. of those at school never become literate. Of course, the total number of pupils at school is not a safe criterion of the state of education, and a sounder standard of comparison would be that number multiplied by the average period spent at school.

Primary Education.—The primary schools are mainly under the direction of the local boards and municipalities. In 1911, the late Mr G. K. Gokhale pleaded in the Imperial Legislative Council for a modified system of compulsory primary education, but Government was unable to accept the proposal mainly for financial reasons. In recent years, eight provincial legislatures have passed Primary Education Acts authorising the introduction of compulsory education by local option. Bombay led the way in this matter by a private Bill which was passed into law in February 1918. The other private Bills which followed were those of Bihar and Orissa passed in February 1919 of Bengal passed in May 1919 and of the United Provinces, passed in June 1919. Of the Government measures, the Punjab Act was passed in April 1919, the Central Provinces Act in May 1920, the Madras Act in December 1920 and the Assam Act in 1925. The City of Bombay Primary Education Act of 1920 extends generally the provisions of the 1918 Act to the Bombay Corporation also enabling it to introduce free compulsory education ward by ward. Not content with this, the Bombay legislature passed a new Act in 1923 to provide for compulsory elementary education and to make better provision for the management and control of primary education in the Bombay Presidency. The Bombay and the United Provinces Acts apply only to municipalities, the Bengal Primary Education Act applies, in the first instance, to municipalities, but is capable of extension to rural areas. Boys only are included within the scope of the Punjab, Bihar and Orissa and Bengal Acts,

while the Central Provinces Act is capable of extension to girls, and the remaining Acts are applicable to both sexes. The United Provinces legislature passed a second Primary Education Act in 1926, but the United Provinces District Boards Primary Education Act. It allows the District Boards to introduce compulsion within their areas. All the Acts are drafted on very similar lines. If a local body as a special meeting convened for the purpose decides by a two-thirds majority in favour of the introduction of compulsion in any part of the area under its control, it may then submit to Government, for approval, a scheme to give effect to its decision. The scheme must be within the means of the local body to carry out with reasonable financial assistance from Government. Ordinarily the age limits of compulsion are from six to ten years though provision is made for prolonging the period. Provision is also made in all the Acts for the exemption of particular classes and communities and for special exemption from attendance in cases of bodily infirmity. Walking distance to a school is generally defined as one mile from the child's home. The employment of children, who should be at school, is strictly forbidden and a small fine is imposed for non-compliance with an attendance order. The Acts generally provide that, subject to the sanction of the local Government, education where compulsory shall be free. Such in brief are the ordinary provisions of the various provincial Education Acts. Local bodies have not however shown as yet any great alacrity in availing themselves of the opportunity afforded them by these Acts.

The following table shows the urban and rural areas in which compulsion had been introduced by the year 1928-29 —

Province	Acts	Areas under "Compulsion"	
		Urban areas	Rural areas
		Towns	Villages
Madras	Elementary Education Act, 1920	25	7*
Bombay	Primary Education Act, 1918	4	
	City of Bombay Primary Education Act, 1920	1	
	Primary Education Act, 1923	3	1

Total		138	2,963

N.B.—This table includes areas in which schemes of compulsory primary education have been partially introduced

† These areas are distributed over 19 districts in which compulsion has been introduced

‡ Individual school areas

§ Unions

* Taluk boards

The poverty of local bodies is usually the cause assigned to their diffidence to introduce compulsory education to any appreciable extent.

On the 31st March 1929, there were 201,688 recognised primary schools in British India containing 9,013,951 scholars. (The latter figure does not include scholars reading in the primary classes of secondary schools.) The total direct expenditures on primary schools, during the year 1928-29 amounted to Rs 7,65,07,444.

Secondary and High School Education.—In 1911 there were 1,210 high schools for boys in India and in 1928-29 the number had risen to 2,634; the number of scholars in the former year being 390,681, and in the latter year, 6,73,169. Some attempts have been made to give a greater bias towards a more practical form of instruction in these schools. The Commission of 1903 suggested that there should be two sides to secondary schools, "one leading to the entrance examination of the universities, the other of a more practical character, intended to fit youths for commercial and other non-literary pursuits." Some years later, what were called B and O classes were started in some schools in Bengal, but, as they did not lead to a university course, they have not been successful. In more recent years the Government of India have advocated

the institution of a school *final* examination in which the more practical subjects may be included. Efforts have also been made to improve the conduct of the matriculation and to emphasise the importance of oral tests and of school records. In Madras, this examination, which was placed under the direction of a Board representative of the University and of Government, proved somewhat cumbersome and certain modifications were made in the United Provinces and the Central Provinces the control of secondary education has been made over to special Boards created for this purpose. Similarly, the Administration of Delhi has established a Board of Secondary Education for that province and the Government of India have established a Board of Intermediate and High School Education, with headquarters at Ajmer, for Rajputana, Central India and Gwalior. In the Punjab the school leaving examination is conducted by a Board. But the main difficulty has not yet been touched. The University which recognises the schools has no money wherewith to improve them and the Department of Public Instruction, which allows the Government grants, has no responsibility for the recognition of schools, and no connexion whatever with the private unaided schools. This dual authority and this division of responsibility

have had unhappy effects. The standard of the schools also is very low so that the matriculants are often unable to benefit by the college courses. In some provinces an endeavour has been made to raise the standard of the schools by withdrawing from the University the intermediate classes and by placing them in a number of the better schools in the State.

There are schools for Europeans and Anglo-Indians which are placed under the control of special inspectors for European Schools. The education of the domiciled community has proved to be a perplexing problem, and in 1912 a conference was summoned at Simla to consider the matter. The difficulty is that European schools are very remote from the general system of education in India. But efforts are being made to bring these schools more into line with the ordinary schools, and Indian Universities generally are affording special facilities for Anglo-Indian boys who may proceed to higher education in Indian colleges.

Medium of instruction in public schools.—The position of English as a foreign language and as a medium of instruction in public schools was discussed by a representative conference which met at Simla in 1917 under the Chairmanship of Sir Bankim Chandra Chatterjee. Although it was generally conceded that the teaching of school subjects through a medium which was imperfectly understood led to cramming and memorising of text-books, the use of English medium was defended by some on the ground that it improved the knowledge of English. The result of the conference was therefore inconclusive. Some local authorities have since then approved of schemes providing for the recognition of local vernaculars as media of instruction and examination in certain subjects.

Cadet Training.—Provision has been made by the Government of India for the training of cadets for the Mercantile Marine Service and a ship, 'H.M.T.S. Dufferin' has been stationed for this purpose in Bombay waters.

Boy Scout Movement.—A happy development in recent years has been the spread of the boy scout movement in public schools which has had an excellent effect in all provinces in creating amongst boys an active sense of good discipline. In 1925-26, there were 53 local associations in Bengal. In Madras there were 600 units with a strength of 13,000 scouts of all ranks. The number of scouts of all ranks in Bombay was more than 25,000. In the United Provinces, the total enrolment was 24,000 which was distributed between the Scout Societies and Baden Powell Associations. In the Central Provinces, the enrolment increased from 13,422 to 20,159. In the North-West Frontier Province, the Education Department has been able to enlist the co-operation of many gentlemen, official and non-official, in the movement with the result that the province now has an association with considerable public favour and support behind it.

Medical Inspection.—Arrangements have been made for medical inspection of scholars. As reported by one province, the inspection though necessarily somewhat perfunctory, is of value. Some provinces are endeavouring to improve their systems in order to make them more effective and useful.

Intermediate Colleges.—One important part of the Calcutta University Commission's recommendations has been accepted by the Government of the United Provinces and the Government of India and incorporated in the Acts establishing the Lucknow Dacca and Aligarh Muslim Universities, and reconstituting that of Allahabad, namely, the separation of the intermediate classes from the sphere of university work and of the two top classes of high schools from the rest of the school classes. The separated classes have been combined together and the control over them has been transferred from the University to a Board of Secondary and Intermediate Education. Such a Board was constituted for the Dacca University area by a notification of the Government of Bengal in 1921. It contains twenty-two members of whom seven are elected by the University. The United Provinces Board was constituted by an Act passed in the same year. It consists of some forty members of whom approximately one-quarter represent the Universities in the Province. The Intermediate Examination Board of the Aligarh Muslim University was brought into existence by an Ordinance framed in 1922. It is composed of eight members. The Ajmer Board is composed of 33 members.

Professional and Technical Education.—A research institute in agriculture was started by Lord Curzon at Pusa in Bihar, which has done valuable work. Conferences have been held at Pusa, Simla and Poona, with the object of providing a suitable training in agriculture. A Royal Commission on Agriculture has submitted its report and as a result of its recommendations an Imperial Council of Agricultural Research has been established by the Government of India at their headquarters. Among commercial colleges, the most important is the Sydenham College of Commerce in Bombay. Industrial institutions are dotted about India, some maintained by Government, others by municipalities or local boards, and others by private bodies. The most important are the Victoria Jubilee Technical Institute in Bombay. The Indian Institute of Science at Bangalore, the product of generous donations by the Tata family. The tendency in recent years has been to place these institutions under the control of the Departments of Industries. In addition to a number of engineering schools, there are Engineering Colleges at Bhoospur, Sibsagar, Poona, Madras, Rangoon, Patna and Benares, each of which except that at Bhoospur is affiliated to a university. The engineering colleges maintain a high standard and great pressure for admission is reported from several provinces. There are schools of art in the larger towns where not only architecture and the fine arts are studied, but also practical crafts like pottery and iron work. There are two forest colleges at Dehra Dun and Coimbatore and a Technical Institute is in existence at Cawnpore and a Mining School at Dhabad. Mining and metallurgy are also taught by the Mining and Metallurgical College at Benares which provides a 4-year course leading to a B.Sc. degree in each subject.

The majority of these institutions are not under the control of provincial departments of education. The following table shows in summary form the number of such institutions and of students attending them —

Type of Institution	1928		1929	
	Institutions	Students	Institutions	Students
Training colleges and normal schools for teachers	745	29 841	766	32 751
Law colleges and schools	16	7 792	16	7 772

Universities

There are now eighteen Universities in India, of which two are situated in Indian States. All these Universities have been incorporated by law for the time being in force. The following statement gives the dates of the various University Acts and the territorial jurisdiction of the different Universities —

No.	University	Dates of Acts.	Territorial jurisdiction
1	CALCUTTA	1864, 1908, 1909 & 1921	Bengal and Assam and certain adjacent Indian States
2	MADRAS	1857, 1904, 1905 and 1923	The Presidency of Madras excluding the Telugu country and Coorg and certain Indian States.
3	BOMBAY	1857, 1904, 1905 and 1923.	The Presidency of Bombay and certain Indian States (Baroda, &c.)
4	PUNJAB	1882, 1904 & 1905	The Punjab, the North-West Frontier Province, Baluchistan and adjacent Indian States (Kashmir, Patiala, &c.)
5	ALAHABAD	1887, 1904, 1905 and 1921	Allahabad
6	BENARES HINDU	Oct. 1915	Benares District
7	MYSORE	July 1916	Mysore State.
8	PATNA	Sept 1917 and 1923	Bihar & Orissa and adjacent Indian States
9	ORMERIA	1918	Hyderabad.
10	DACCA	April 1920	Radius of 5 miles.
11	ALIGARH MUSLIM	Sept 1920	Radius of 10 miles.
12	RANGOON	Oct 1920 and 1921	Burma.
13	LUCKNOW	Nov 1920	Local
14	DELHI	March 1922	Delhi
15	NAGPUR	June 1923	The Central Provinces and Berar
16	ANDHRA *	Jan. 1926	The Telugu Country of the Madras Presidency
17	AGRA	April 1927	United Provinces (excluding the territorial jurisdictions of Allahabad, Benares, Aligarh and Lucknow Universities), Rajputana and Central India
18	ANNAMALAI	January 1929	Radius of 10 miles.

* Actually established after 1925-26

The first University in India, that of Calcutta, was founded in 1857. Between 1857 and 1887 four new Universities, at Bombay, Madras, Lahore and Allahabad were added. These five universities were all of the affiliating type. They consisted of groups of colleges, situated sometimes several hundred miles apart, and bound together by a legally constituted central organisation, which determined the qualifications for admission, prescribed the courses of study, conducted the examinations, and exercised a solid form of control over the affiliated colleges. There was nothing under the system to limit the number of institutions affiliated to a University and for thirty years, i.e. from 1857 to 1917 the growing demand for university education was met, not by the creation of new universities but by enlarging the size of the constituent colleges and by increasing their number. By 1917 this inflation had been carried on so far that the composition of the original five universities stood as follows—

University	Colleges	Scholars
Calcutta	58	28,618
Bombay	17	8,001
Madras	53	10,216
Punjab	24	6,553
Allahabad	33	7,807

It had become obvious that further expansion on the same lines was no longer possible without a serious loss of efficiency and the Government of India had recognised in their resolution of 1913 the necessity of creating new local teaching, and residential universities in addition to the existing affiliating universities. The development of this policy was accelerated by the strength of communal feeling and the growth of local and provincial patriotism, leading to the establishment of a number of teaching universities. The new type of universities has since been strongly advocated by the Calcutta University Commission which has offered constructive proposals as to the lines to be followed in university reform.

The Universities of Calcutta and the Punjab—These two Universities alone still retain their old form. On the 27th March 1921 an amending Act was passed by which the Governor-General ceased to be the Chancellor of the Calcutta University and now the head of the provincial government is the Chancellor of each of the older universities. The Vice-Chancellor is nominated by the Government concerned. The executive body is the Syndicate which is now organised so as to include larger educational element. Over this body the Vice-Chancellor presides, all other members being elected by the Faculties, except the Director of Public Instruction who is a member *ex-officio*. The secretarial work is under the direction of the Registrar. The legislative body is the Senate which consists of from 75 to 100 members, 80 percent of whom are nominated by the Chancellor, the rest being elected by the Senate, or by its Faculties, or by the body of registered graduates. The Senate

is divided into Faculties which are in most cases those of arts, science, law, medicine, and engineering. There is an oriental faculty in the Punjab University alone. There are also Boards of Studies, whose duties are to recommend text books or books which represent the standard of knowledge required in the various examinations. The newer universities differ considerably from the older universities in constitution.

Post-graduate work.—Apart from the general tightening up of university control over its colleges, the chief feature of university development since the passing of the Act of 1904 has been participation by the universities in post-graduate teaching and research. In Madras a small number of university professors have been appointed in the Punjab the services of a certain number of temporary professors from overseas have been engaged. In Bombay a certain number of college professors and others have delivered lectures to post-graduate students under the auspices of the University. But the most notable advance has been made in Calcutta, owing to the energy of the late Sir Asutosh Mukherjee and to the liberality of Sir Tarak Nath Palit and of Sir Rash Behari Ghosh. In 1916, a committee was appointed to investigate the matter. In accordance with its report, new regulations have been passed by the Senate, whereby all post-graduate teaching and research in arts and sciences in Calcutta is now conducted directly by the University, though many of the college teachers have been invited to take part in the work. Post-graduate councils in arts and sciences have also been constituted, which comprise all the teachers engaged in the work and a very small number of additional members appointed by the Senate. A bill for the reorganisation of the Calcutta University was drafted and a Committee considered the question of the future of the post-graduate department and connected financial problems. The bill was under the consideration of Government and the Committee was still sitting at the close of the year 1928-29.

The University of Madras—This is one of the older universities. It has recently been reconstituted. The reconstituted University while functioning as teaching and residential University in so far as the city of Madras is concerned continues to exercise its jurisdiction over its numerous colleges which remain affiliated to it. The administration of the University is in the hands of a Senate which has been so constituted as to include both those who are educationists and those who are connected with the actual business and commercial life. A large elective element has been introduced in its composition. Government control over the details of administration has been decentralised. The affairs of the University are managed by the Senate through a body called the Syndicate, while the Academic Council, another new body has charge of the academic matters. The affiliated colleges have been entrusted to the care of a new organisation called the Council of Affiliated Colleges. In accordance with the recommendations of the Calcutta University Commission, the Intermediate Examination Certificate has been made the admission test to the courses of the University. The Governor-General of India has been associated with the University as its Visitor with certain emergency

power. The Governor of Madras continues a Chancellor. The Vice-Chancellor is an elected whole-time officer.

The University of Bombay.—A new Act was passed by the Legislative Council of the Bombay Presidency in 1928 to reconstitute the University of Bombay so as to enable the University to provide greater facilities for higher education and to conduct postgraduate teaching and research in all branches of learning including technology, while continuing to exercise due control over the teaching given by colleges affiliated to it from time to time. The chief provisions of the Act are to extend the elective principle to the composition of the various bodies of the University and to entrust the technical part of the work to a newly constituted body, the Academic Council, which is composed of thirty of persons connected directly with education. The size of the Senate has been raised from 100 to 150 members (excluding donors and nominees of donors) of whom 93 are elected members. This Act was enforced in 1929.

The University of Allahabad.—This is another old University which has undergone reorganisation. In 1921 an Act was passed with a view to establishing a unitary, teaching and residential University at Allahabad while enabling the University to continue to exercise due control over the quality and character of the teaching given in the name by colleges affiliated to the University at Allahabad. The Agra University has now relieved it of its affiliating functions. The Governor-General is *Vice-Chancellor* and the Governor of the United Provinces *Chancellor*. The Vice-Chancellor is a whole-time officer. There is a *Court*, an *Executive Council*, an *Academic Council*, a *Committee of Reference* dealing with expenditure only, a *Council of Associated Colleges*, &c.

The University maintains a good reputation for research work carried out by staff and students.

The Mysore University was constituted under Regulation V of 1916, for the better encouragement and organisation of education in the State. His Highness the Maharaja is the Chancellor. The University is very similar in its constitution to the older Indian universities, having a Senate of not less than fifty and not more than sixty members but, unlike the older universities, it gives seats on the Senate to the university professors *ex-officio*. It departs from existing practice by controlling university instruction in Mysore and Bangalore, and by conducting the work of the first year of the old college course in a few specially select old high schools. This University has been recognised by the Government of India as a University incorporated by law for the time being in force, that is to say, its examinations and degrees have been accorded the status of the corresponding examinations and degrees of a University incorporated by law in British India.

The Patna University.—Much thought has also been given to the evolution of a new type of university which will run abreast of the old. Patna University, which was constituted in 1917, is in most of its features a university of the old type, but certain innovations have been made. The Chancellor, who is the Governor of the province, may assist any proceeding of the University which is not in conformity with the Act and the

Regulations. In the Senate the application of the elective principle has been extended, by increasing both the proportion of the elected Fellows and the categories of electing bodies and the Senate includes representatives of the teaching staff and of the graduate teachers of recognised schools. Further, all colleges are given statutory representation on the Senate in the persons of their principals. The Syndicate is the ultimate authority in academic matters, subject to the proviso that any six of its members have the power to refer such matters to the Senate for review. The Vice-Chancellor is appointed by the local Government. In addition to other duties, he has the power to inspect all colleges of the University. The colleges affiliated to the University are of two kinds: colleges of the University whose buildings are situated within a specified area, and external colleges, whose buildings are situated in one of the four following towns: Masarfarnur, Bhagalpur, Cuttack and Hazaribagh. The Syndicate has been reconstituted and now consists of the Vice-Chancellor, the Director of Public Instruction, nine teachers and seven non-teachers.

The Osmania University Hyderabad.—The Osmania University was established under a Charter promulgated with a *Pirman* of His Highness the Nizam, dated the 22nd September 1918. The fundamental principle underlying the working of the University is that Urdu forms the medium of education, although a knowledge of English as a language is compulsory in the case of all students. There is a Bureau of Translation attached to the University which produces text books required for college classes. The constitution of the University consists of a Council, a Senate, a Syndicate, Faculties and Boards of Studies. There is a Chancellor and a Vice-Chancellor, both *ex-officio* officers. The executive government of the University including general supervision and control over colleges is vested in the Council which is the highest authority and which performs the function assigned to Government in the case of British Indian Universities. The University possesses at present only one constituent college, viz. the Osmania University College, which was opened in 1919. The Osmania University has been recognised by the Government of India as a University incorporated by law for the time being in force, that is to say its examination and degrees have been accorded the status of the corresponding examinations and degrees of a University established by law in British India.

The Hindu University, Benares.—The creation of the Hindu University, Benares, forms a landmark in the history of the Indian university system. The university is not designed to meet the needs of one province alone, but to draw students from all parts of India.

It has no monopoly, no privilege. Its spheres are not diffused by the necessity of supervising distant colleges nor is its vitality impaired by the encumbrance of administrative duties other than those of organising its own teaching. It is therefore the first Indian university which is primarily a seat of learning and not an administrative organisation. Its constitution is therefore very different from those of the other Indian universities. A dividing line is made

between administrative matters, entrusted to a large body called the Court, with an executive committee called the Council, and academy matters, entrusted primarily to a Senate, with an executive body called the Syndicate. The Court which is the supreme governing body besides its administrative powers, has the right to review the acts of the Senate, except where the Senate has acted in accordance with the Act, statutes and regulations. With a solitary exception it is composed entirely of Hindus. The Senate has the entire charge of the organisation of instruction in the University and the colleges, the courses of study, and the examination and discipline of students, and the conferment of ordinary and honorary degrees.

The University of Dacca.—With the modification of the Partition of Bengal in 1911, Dacca ceased to be the capital of the separate province of Eastern Bengal and Assam. Shortly afterwards, the Government of India decided to establish a university of Dacca and the Government of Bengal appointed a committee to frame a scheme for the new University. The committee was instructed that the University should be of the teaching and residential and not of the federal type, and that it should be a self-contained organism unconnected with any colleges outside the limits of the city of Dacca. The committee which was presided over by the late Mr R. (afterwards Sir Robert) Nathan presented its report later in the year. The report is of great value and in it certain new principles are enunciated. Great emphasis was attached to physical training and education and also to the tutorial guidance of the students. The University was to be very largely a State institution, and practically all its teachers and those of its colleges were to be Government servants. Though the colleges were to be separate units, each with its separate staff and buildings, they were to be linked together and with the University by a close form of co-operation. The executive body, to be called the Council, was to have very considerable powers, subject to the sanction of Government. The Council, which was to be a large and representative body, was to be the legislative authority, subject to the control of Government, and in other respects an advisory authority. The total cost of the full scheme was estimated at 55 lakhs, but deducting certain sums which were available from other sources the net cost was put down to nearly 40 lakhs, exclusive of recurring charges. These were expected to involve a net total of about 6½ lakhs annually. Before the scheme thus elaborated (which had received the Secretary of State's sanction) could be taken in hand, the war broke out. The Act constituting the University was passed in April 1920 and Mr L. (now Sir) P. J. Hartog, G.C.S.I., was appointed the first Vice-Chancellor. The Act has since been amended in order to make the Executive Council the chief authority of the University.

The Alligarh Muslim University.—It was the aim of Sir Syed Ahmed Khan years ago to place the benefits of a liberal education within the reach of the Muhammadan community, and in 1875 a school was opened which three years later was converted into the Muhammadan Anglo-Oriental College, Alligarh. The movement in favour of transferring this

college into a teaching and residential university started, slowly, at the end of the last century. In 1911, during the visit of His Majesty the King Emperor to India, His Highness the Aga Khan made an appeal which resulted in the collection of large subscriptions. A draft constitution was drawn up and a consultative committee was formed. But the draft constitution was not approved by the Secretary of State, and on the question of the right of affiliating colleges outside Alligarh in particular, there was a sharp difference of opinion. Government laid down, as in the case of the Hindu University, that the university should not have the power of affiliating Muslim institutions in other parts of India.

On October 16th, 1915, a meeting of the Muslim University Association was held at Alligarh, under the presidency of the Raja (now Maharaja) of Mahmudabad, when it was proposed that the meeting recommend to the Muslim University Foundation Committee the acceptance of the Muslim University on the lines of the Hindu University. It was evident at the meeting that a large number of Indian Muslims were not prepared to accept a constitution for their university similar to that of the Hindu University.

In April, 1917, at a meeting of the Foundation Committee the following resolution was passed—

"That this meeting of the Muslim University Foundation Committee hereby resolves with reference to the letter of the Government of India, Education Department dated Delhi, 17th February 1917, D O No. 66, that the Committee is prepared to accept the best University on the lines of the Hindu University. It further authorises the Regulation Committee appointed at its Lucknow meeting, with the President and Honorary Secretary of the Muslim University Association as its *ex-officio* members, to take necessary steps in consultation with the Hon. the Education Member for the introduction of the Muslim University Bill to the Imperial Legislative Council."

The bill referred to above was ultimately introduced into the Council and was passed in September 1920. The Act came into force on December 1st, 1920.

The University is now being overhauled in accordance with the recommendations of the Rahimtoola Enquiry Committee.

The University of Rangoon.—Plans for a university in Burma had been under consideration for some years. After his arrival in Burma the then Lieutenant-Governor Sir Harnsford Butler thought that, on general grounds and with some reference to the needs of the province, the Rangoon University might usefully be of a more practical type than any yet attempted in India with courses in arts and science, pure and applied, technology, medicine, engineering, agriculture, law, forestry, veterinary, science and training, commerce and architecture. It might perhaps combine with university instruction practical studies at the Oriel Court, the Pasteur Institute and the hospitals; and also at the Museum which the local Government was committed to build as soon as funds were available. It is possible in Burma to a greater extent than in any of the older and more

advanced provinces in India to concentrate the intellectual energies of the province in one immediate neighbourhood and to develop a really many-sided university. An Act to establish a teaching and residential college at Banarose was passed on the 24th October 1920. The Act however did not find favour with a section of Burnees and was consequently amended in 1923. The amending Act introduced greater popular and representative elements in the composition of the Council and invested the reformed Council with greater discretionary powers in matters affecting public interest, such as the question of admitting affiliation of new colleges or of admitting more colleges to the status of constituent colleges. In short, it rendered the University more suited to the needs and aspirations of the province. The University authorities are the Chancellor, Vice-Chancellor, the Council (with an executive committee) and the Senate. The Council is the supreme administrative body while the Senate is an academic body with entire control of studies, examination and discipline. The Governor-General, as Visitor has the right to cause inspection to be made. The University is building up an impressive record of research work.

The Lucknow University—The foundation of this University may primarily be ascribed to the patriotism of the people of Oudh. It is a unitary teaching and residential University incorporated by an Act passed in 1920. The University authorities are (1) the Court, with powers of making statutes, (2) the Executive Council, which administers the property of the University and appoints examiners, (3) the Academic Council, which controls the teaching and advises the Executive Council on all academic matters, (4) a Committee of Reference (a Sub-Committee of the Court) deals with items of new expenditure only. The Governor-General, as Visitor, has the same power as in the case of the Banarose University and other new, or reorganised universities. The chief need of the University is a Maternity Hospital for the Medical College Students have now to go to Madras for practical training in gynaecology.

The Delhi University—The Delhi University was created by an Act passed in 1922. The University depends for its existence mainly on the generosity of the Government of India who occupy the position of a local Government in relation to it. It is a unitary teaching and residential University, designed on the model recommended by the Calcutta University Commission for the Dacca University, possessing at present three constituent colleges. The Act provides for two schemes—a provincial and a permanent one. Under the provisional scheme, which is in force at present, the constituent colleges remain with their hostels, etc. in their existing buildings. They also retain intermediate classes. But there have been instituted, so far as possible and desirable, common classes for graduate teaching. The matriculation examination of an Indian University, or an equivalent examination, is the admission test to the University courses. The permanent scheme contemplates that the existing colleges in Delhi City would become intermediate institutions and that degree classes would be conducted in new buildings to be built in Imperial Delhi.

There would be halls and hostels where students would receive tutorial instruction. The Intermediate Examination of an Indian University or an equivalent examination, would become the admission test to the University. The Governor-General is the *ex-officio* Chancellor. There is a Pro-Chancellor, a Vice-Chancellor and a Rector. The principal governing bodies of the University are a Court, an Executive Council and an Academic Council. A scheme for the reorganisation of the University is at present under the consideration of the Government of India.

The Nagpur University—This University was created by an Act passed in 1923. Its constitution follows the recommendations of the Calcutta University Commission and the provisions in other University Acts in so far as they are applicable to local conditions. In particular the recommendations of the Calcutta University Commission have been adopted in the matter of the appointment of the Chancellor and the Vice-Chancellor, and of their powers and duties, the composition and functions of the Court, the Executive and Academic Councils, and the relations of the University with Government. The University Act provides in the first instance for a University of an examining and affiliating type in which the existence of the colleges is preserved as the unit of instruction both in the University centre of Nagpur and in other places which contain colleges admitted to the privileges of the University. The Act is so framed as to permit of a gradual development of the University into a managing and teaching body which may supplement, or entirely replace colleges by University instruction either by taking over the management of existing colleges or by instituting and maintaining its own colleges.

Andhra University—In January 1926 the Governor General accorded his assent to an Act, passed by the Madras Legislative Council, incorporating a new University in the Madras Presidency. The new University is called the Andhra University and is of an affiliating type and all colleges located in the Telugu country, whether first or second grade, professional or technical have become affiliated colleges. The university endeavours to develop scientific and technical education with special reference to the industries of the Telugu districts, it appoints its own teaching staff and will ultimately build, control and maintain colleges, laboratories and hostels of its own. The Act contemplates the possibility of a rapid development in the study of Telugu in the use of the vernacular as the medium of instruction and examination and also aims at the ultimate establishment of more than one unitary and residential university in the Telugu districts. The headquarters of the university have been located at Beswada.

Agra University—This University was established and incorporated by the Agra University Act, 1926 (United Provinces Act No VIII of 1926). It is a purely affiliating University and has relieved Allahabad University of its external side. Its territorial jurisdiction embraces the United Provinces (excluding the territorial limits of the Allahabad, Benares Hindu, Aligarh Muslim and Lucknow Universities), Rajputana and Central India.

The Annamalai University, Chidambaram, Madras Presidency—This is a teaching and residential University incorporated by an Act of the Legislative Council of the Madras Presidency (Madras Act No. 1 of 1929). It owes its foundation largely to the generosity of Sir Annamalai Chettiyar who has handed over to the University certain institutions established and maintained by him at and near Chidambaram with all the properties attached thereto and has also given a sum of Rs. 20 lakhs towards the creation of an endowment fund. The aim of the University is to encourage higher education, and research in the Tamil districts of the Madras Presidency. The Administration of the University is in the hands of a Syndicate, a Senate a Finance Committee and an Academic Council. The Act provides for a continuous connection with the University of Sir Annamalai Chettiyar and his successor, as the Founder of the University, with certain powers and privileges. The Governor-General is the Visitor of the University. The Governor of Fort St. George is the Chancellor of the University and the Vice-Chancellor is appointed by the Chancellor from a panel of three persons recommended by the Founder.

University Training Corps—An interesting development in the corporate life of the Universities has been the foundation of University Corps attached to the Indian Defence Force. Such Corps are now in existence at the various University centres in British India.

Inter-University Board—The idea put forward by the Indian Universities Conference in May 1924 for the constitution of a central agency in India took practical shape and an Inter University Board came into being during 1925. Twelve out of fifteen universities joined the Board. Its functions are—

(a) to act as an inter university organization and a bureau of information,

(b) to facilitate the exchange of professors,

(c) to serve as an authorized channel of communication and facilitate the co-ordination of university work

(d) to assist Indian universities in obtaining recognition for their degrees, diplomas and examinations in other countries

(e) to appoint or recommend, where necessary, a common representative or representatives of India at Imperial or International conferences on higher education.

(f) to act as an appointments bureau for Indian universities,

(g) to fulfil such other duties as may be assigned to it from time to time by the Indian Universities.

Each member University has to make a fixed annual contribution towards the expenses of the Board.

The meetings of the Board are held yearly. The Board consists of one representative of each of the member Universities and one representative of the Government of India.

The Board has not yet had much influence on University policy in India but it has done a considerable amount of useful work in collecting information and in stimulating thought regarding current University problems. It also put certain universities into touch with distinguished teachers from abroad who were available for lecturing at University centres and arranged for two sectional conferences—the one of representatives of the five universities in the United Provinces and the other of representatives of the two universities in Bengal. In addition to the Hand book of Indian Universities the Board has issued a pamphlet entitled 'Facilities for Oriental Studies and Research at Indian Universities'.

There is still a leeway to be made good. All the influences which operate against the spread of education amongst the boys are reinforced in the case of women by the purdah system and the custom of early marriage.

Arts colleges, medical colleges, and the like admit students of both sexes, and a few girls attend them. The Lady Hardinge Medical College for Women at Delhi gives a full medical course for medical students. The Shree-mati Nathibai Damodar Thackersey Indian Women's University was started some nine years ago by Professor Karve. It is a private institution and is doing good pioneer work.

The All India Women's Conference on Educational Reform, which holds its meetings annually and has constituent conferences established all over the country is also doing much useful work. Recently, an All India Women's Education Fund Association has been established in connection with this Conference. This association appointed a special committee to enquire into the feasibility of establishing a central Teachers Training College of a specialised Home Science character.

Education of Indian Women and Girls—The comparative statement below shows the state of women's education during 1928-29 —

	Institutions			Scholars		
	1929	1928	Increase or Decrease	1929	1928	Increase or Decrease
	1	2	3	4	5	6
For Females						
Recognised Institutions—						
Arts Colleges	19	19		1,864	1,829	+44
Professional Colleges	7	7		227	230	-3
High Schools	278	262	+16	68,604	56,227	+12,377
Middle Schools	743	712	+31	96,870	96,411	+459
Primary Schools	30,902	28,951	+1,951	1,192,972	1,081,801	+1,171
Special Schools	369	352	+17	14,641	12,487	+2,154
Unrecognised Institutions	3,480	2,878	+602	76,572	69,812	+6,760
Totals	35,166	32,831	+2,335	1,881,557	1,222,758	+658,799

The Girl's Guide movement is also spreading slowly, but steadily, in girls' schools with good results.

Education in the Army.—The Army in India undertakes the responsibility of the education of certain sections of the community. Its activities are directed into various channels with certain definite objects, which may be summarised as follows:—

(i) The education of the soldier, British and Indian, in order to—

- (a) develop his training faculties.
- (b) improve him as a subject for military training and as a citizen of the Empire;
- (c) enhance the prospects of remunerative employment on his return to civil life.

(ii) The fulfilment of the obligations of the State to the children of soldiers, serving and ex-service (British and Indian).

(iii) The provision, as far as possible, of training for the children of soldiers, who have died in the service of their country.

(iv) The creation of a body of Indian gentlemen educated according to English public school traditions, which should provide suitable candidates for admission to the Royal Military College, Sandhurst.

The Prince of Wales' Royal Indian Military College Dehra Dun.—A Royal Military College has been established at Dehra Dun. The aim of this institution is to provide education on the lines of an English public school for the sons of Indian gentlemen, both civil and military, up to the standard required for the passing of the entrance examination of the Royal Military College, Sandhurst.

Chiefs' Colleges.—For the education of the sons and relatives of the Chiefs and Princes of India, whose families rule over one-third of the Indian continent, five Chiefs' Colleges are maintained, viz.—

- (a) Mayo College, Ajmer, for Rajputana Chiefs.
- (b) Daly College, Indore, for Central India Chiefs.
- (c) Atashan College, Lahore, for Punjab Chiefs.
- (d) Rajkumar College, Rajkote, for Kathia war Chiefs, and
- (e) Rajkumar College, Rajpur, for Central Provinces and Bihar and Orissa Chiefs.

In point of buildings, staffs and organisation these institutions approach English Public Schools. Students are prepared for a diploma examination conducted by the Government of India. The diploma is regarded as equivalent to the matriculation certificate of an Indian University. A further course of University standard called the Higher Diploma is conducted at the Mayo College. The examination for this Diploma is also held by the Government of India. Its standard is roughly equivalent to that of the B.A. diploma of an Indian University. **Indigenous Education.**—Of the 12,165,839 scholars being educated in India 618,842 are classed as attending 'private' or 'un-recognised' institutions. Some of these institutions are of importance. The Gurukulas near Haridwar and Sir Bahadur Nath Tugwa's school at Deogarh have attained some fame. Mr Gandhi's school at Ahmedabad has attracted attention and the numerous monastery schools of Burma are well-known. Connected with every big

Mosque in northern India there is some educational organisation and the schools attached to the Fafahpuri and Golden Mosques at Delhi and the Dar-ul-Ulm, Deoband, are noted. These institutions generally have a religious or 'national' atmosphere and are possibly destined to play an important part in the future of India.

The Ayurvedic and Unani Tibbia College, Delhi, founded by the late Hakim Ajmal Khan, is an important unrecognised institution. It provides instruction in the indigenous system of medicine up to the highest standard and also gives some training in surgery.

Indian students in Foreign Countries.—Indian students still proceed to foreign countries, mainly, to Great Britain, America, Japan and Germany to complete or supplement their education. Thirty years ago the number of Indian students in Great Britain was 400. The number now is well over 2,000, and including students at Universities on the Continent and in the United States of America the total number who are abroad in one year is not less than 2,500. The known figures for 1928-29 are as follows:—

Institutions.	No of Students
1 Oxford University	57
2 Cambridge University	95
3 London University and other Institutions at London	935
4 Other English Universities and Welsh Universities	310
5 Scottish Universities	276
6 Irish Universities	67
7 Inns of Court	539
Total	2,279

As far as can be ascertained, there were 34 Indian students at French Universities, 47 in German Universities and 213 in the Colleges and Universities in the United States of America in 1928-29. The last figure excludes a number of Indians of the student type who were employed in industrial and professional training of various kinds but whose names are not recorded on the books of any University or College.

Hartog Committee on Education.—The most notable event in recent years has been the appointment of the Auxiliary Committee to the Indian Statutory Commission, under the chairmanship of Sir Philip Hartog, to make enquiries into the growth of education in British India and to prepare a 'review of the growth of education with particular reference to its organisation in British India and its relation to political and constitutional conditions and potentialities of progress. The report of the Committee has been published, and constitutes a valuable document on the present state of education in India.

Christian Education.—A Commission headed by Dr A. D. Lindsay, Master of Balliol College, Oxford, is touring India with a view to investigate the various problems connected with the higher education provided by the various Missionary bodies working in India. The Commission which has been appointed by the International Missionary Council arrived in India in November 1930 and is expected to remain in India up to the beginning of April 1931.

The following table gives the latest available figures and other particulars about the Universities —

STATISTICS OF UNIVERSITIES IN INDIA, 1929

University	Type	Original Date of Foundation	Faculties *	No of Members of Teaching Staff		No of Students		No of Students who graduated in Arts and Science	REMARKS
				In University Departments	In Affiliated Colleges	In University Departments	In Affiliated Colleges

The Co-operative Movement.

The Need.—More than seventy per cent of the vast population of India subsist on agriculture and the majority of these millions generally live, under present conditions, from hand to mouth. The ryot's occupation is healthy and productive, and he is proverbially honest and straightforward in his dealings, except when years of famine and hardship make him at times crafty and recalcitrant. Owing to his poverty, combined with want of education and consequent lack of foresight, he has to incur heavy debts to meet occasional expenses for current seasonal purposes, the improvement of his land, or for ceremonial objects, and he has therefore to seek the assistance of the local money-lender, known as the Sowkar or the Mahajan. The rates of interest on such advances, though varying from province to province and even in different parts of a province, are generally very high. In addition to charging excessive rates, the Sowkar extorts money under various pretexts and often takes from the needy borrower bonds for amounts in excess of those actually advanced. One of the chief causes of the ryot's poverty is, that owing to the absence of security and his short-sightedness due to want of education, he did not as a rule collect and lay by his savings but frittered away his small earnings in extravagant and unproductive expenditure, on the purchase of trinkets and ornaments, and on marriage and other ceremonies. Tradition says that he hoarded coins under the ground with the likelihood that on his death the money was lost to his family for good. This absence of thrift and the habit of dependence, in case of difficulty, on the Government or on the Sowkar are the bane of his life. There is besides a general absence of ideals or desire for progress. A co-operative society changes all this, inasmuch as it provides him with a suitable institution in which to lay by his savings and teaches him the valuable lesson of self help through the sense of responsibility he feels in being its member. Thus the chronic poverty and indebtedness of the Indian agriculturist afford a very good field for the introduction of co-operative methods, especially as his work is of a productive character likely to enable him to earn a better living under circumstances more invulnerable than they are at present.

Genesis of the Movement.—The question of improving rural credit by the establishment of agricultural banks was first taken up in the early sixties when Sir W. Wedderburn, with the assistance of the late Mr. Justice M. G. Ranade, prepared a scheme of agricultural banks which was approved of by Lord Ripon's Government but was not sanctioned by the Secretary of State. The matter was not again taken up until about fifteen years later when Lord Wellesley's Government in Madras despatched Mr. F. A. (now Sir Frederick) Nicholson, to report on the advisability of starting agricultural or land banks in that Presidency for the financing of the agricultural industry. There was in existence in Madras an indigenous system of banking available for persons of small means. This institution called the Nidhi, corresponded in some respects

to the provident funds and friendly societies in European countries. Through these Nidhis provided cheap capital to agriculturists the spirit of co-operation was lacking in them. Sir Frederick submitted an extensive report to Government suggesting that the formation of co-operative societies afforded an excellent means for relieving rural indebtedness. Unfortunately, the report was not received favourably either by the non-official public or by the Government of Madras, and no action was taken on the recommendations made in it. The next few years saw two of the worst famines from which India had ever suffered and in 1901 Lord Curzon appointed a Commission to report on the measures to be adopted in future to protect the ryot from the ravages of famines and to relieve distress. The Commission laid stress on the proper working of the Agricultural Loans and the Land Improvement Loans Acts under which (tailed) advances are made by Government to cultivators. This system was given a long trial in the years previous to the great famines as well as during the years succeeding the 1899-1900 famine. But it is acknowledged on all hands that the system has not been successful in solving the problem of rural stagnation, as it is clear that it is not facility for obtaining cheap capital alone which will raise the agriculturist and relieve him from his debts, but the provision of capital combined with the inculcation of habits of thrift and self-help. This Commission also recommended that the principal means of relieving famines was by strengthening the moral backbone of the agriculturist and it expressed the view that the introduction of co-operation in rural areas might be useful in securing this end.

Co-operative Credit Societies Act.—These recommendations induced Lord Curzon to appoint a Committee with Sir Edward Law at its head to investigate the question and a report was submitted to Government recommending that co-operative societies were worthy of every encouragement and of a prolonged trial. Individual Officers of Government were at the same time making experiments on similar lines in the United Provinces and the Punjab with satisfactory results. All these activities, however, took an organised shape only when Lord Curzon's Government introduced in the Imperial Legislative Council a Bill to provide for the constitution and control of co-operative credit societies. The main provisions of the Bill which became the Co-operative Credit Societies' Act (Act X of 1904) were—

- (1) That any ten persons living in the same village or town or belonging to the same class or caste might be registered as a co-operative society for the encouragement of thrift and self-help among the members.
- (2) The main business of a society was to raise funds by deposits from members and loans from non-members, Government and other co-operative societies, and to distribute the money thus obtained in loans to members, or with the special permission of the Registrar, to other co-operative credit societies.
- (3) The organisation and control of co-operative credit societies in every Province were put under the charge of a special Govern-

ment officer called the Registrar of Co-operative Credit Societies.

(4) The accounts of every society were to be audited by the Registrar or by a member of his staff free of charge.

(5) The liability of a member of a rural society was to be unlimited.

(6) No dividends were to be paid from the profits of a rural society, but the profits were to be carried at the end of the year to the reserve fund, although when this fund had grown beyond certain limits fixed under the bye-laws, a bonus might be distributed to the members.

(7) In urban societies no dividend was payable until one-fourth of the profits in a year were carried to the reserve fund.

Soon after the passing of the Act the local Governments in all the Provinces and major provinces appointed Registrars with full powers to organise registers, and supervise societies. In the early stages of the working of this Act, Government loans were freely given to the societies, and the response to the organising work of the Registrars was gradual and steady throughout most parts of the country.

Co-operative Societies Act.—As co-operation progressed in the country defects were noticed in the Co-operative Credit Societies Act and these were brought to the attention of Government by the Conferences of the Registrars which were for some years held annually. In two directions the need for improved legislation was especially felt. In the first place, the success of credit societies had led to the introduction of co-operative societies for distribution and for purposes other than credit for which no legislative protection could be secured under the then existing law. And, secondly, the need for a free supply of capital and for an improved system of supervision had led to the formation of various central agencies to finance and supervise primary credit societies and these central agencies ran all the risks attendant on a status unprotected by legislation. The Government of India recognising the desirability for removing these defects, decided to amend the old Act, and a Bill embodying the essential alterations proposed was introduced in the Imperial Legislative Council, and after a few amendments it emerged from the Council as the Co-operative Societies Act (II of 1912) replacing Act X of 1904. The outstanding features of the new Act were as under—

(a) It authorised the formation of societies for purposes other than credit, which was possible under the old Act only with the special permission of the Local Government. (This extension of co-operation to purposes other than credit marks an important stage in its development in India.)

(b) It defined, in precise terms, the objects for which co-operative societies could be organised.

(c) It removed the arbitrary division of societies into rural and urban and substituted a more scientific division in accordance with the form of liability adopted.

(d) It facilitated the growth of central agencies by limiting on limited liability by means of a special clause about the registration of a society one of whose members is a registered society.

(e) It empowered Local Governments to frame rules and alter bye-laws so as to put restrictions on the dividends to be declared by societies and allowed to societies with unlimited liability the discretion to sanction distribution of profits to their members according to principles laid down by the Local Governments.

(f) It allowed societies with the permission of the Registrar to contribute from their net profits, after the reserve fund was provided for, amounts up to 10 per cent of their remaining profits to any charitable purpose as defined in the Charitable Endowments Act. (This kept the movement in touch with local life by permitting societies to lend assistance to local educational and charitable institutions.)

(g) It prohibited the use of the word "co-operative" as part of the title of any business concern except a registered society.

Composition of the Capital of Agricultural Societies.—On the organisation of agricultural credit was necessarily concentrated the attention of the promoters, for it presented a far more important and far more difficult problem than urban credit. There was a great variety of types among the agricultural societies started in different provinces, and some Registrars adopted the "Half-interest" and some the "Lusatti" methods in their entirety. The commonest type, as prevailing in the Punjab, Burma, and the United Provinces—and now extended practically all over India—is the unlimited liability society with a small fee for membership and a share capital, the share payments to be made in annual instalments. In some places, the bye-law insist on compulsory deposits from members before entitling them to enjoy the full privileges of membership. Part of the working capital is raised by deposits from members and other local sympathisers but the bulk of it in all provinces is obtained by loans from central and other co-operative societies. The proportion of owned capital to the total resources is growing almost everywhere. In all the Provinces, the Government set apart in the initial stages every year a certain sum to be advanced as loans to newly started co-operative societies, usually up to an amount equal to the deposits from members, raised by a society. State aid in the form of direct money does to agricultural credit societies has now become an exception rather than the rule, and this withdrawal in no way hampers the development of the movement on account of the rapid increase of co-operative financing agencies and the growth of public confidence in these institutions. Out of a total working capital of 32½ crores, 4 crores were loans, 5 crores reserves, 1½ crores deposits of members, 1½ crores deposits from non-members and societies, 2 crores loans from Government and 10½ crores loans from central societies. In Bombay, since 1923 Government have taken the place of the deposit of the Provincial Bank as a guarantee for distribution of advances to agriculturists under the Land Improvement Loans Act, such advances to be made through the primary societies and the central banks to which these are affiliated. The Royal Commission on Agriculture have recommended that where co-operative land mortgage banks are organised

they provide suitable agency for the distribution of loans under the Land Improvement Loans Act.

Constitution of Agricultural Credit Societies.—The typical agricultural credit society in India corresponds to the "Raisfelsen society," the management being gratuitous, the profits indivisible, and the area of work limited. Where shares form an integral part of the system, the distribution as dividend of a portion of the profits after ten years working is permitted under certain restrictions although in the Punjab the tendency now is to make the profits wholly indivisible and the shares non-withdrawable. In several parts of the country there are villages where a few literate agriculturists may be found but many of these are hardly fit enough to undertake the responsible work of a secretary, being practically ignorant of account-keeping. In such villages either the village school master or the village accountant is sometimes appointed secretary. In some places, where a suitable person is not available on the low pay a single society can afford, neighbouring societies are grouped together with a whole time well paid secretary. In the Central Provinces, especially and to a certain extent in Bihar and Orissa, Bengal and the United Provinces, the accounts are written up by group secretaries, clerks or Muharrirs, controlled more or less by the staff of central banks or unions to which societies are affiliated. As the work of societies develops, the need for trained secretaries is being felt more keenly for it is now realized that the function of a secretary does not consist merely in writing the accounts correctly. With a view to meet the demand for trained secretaries, training classes have been organised in Bombay, in the Punjab, in Bengal and elsewhere during the last few years and efforts have been made to provide education in co-operation through the new educational and propagandist associations which have been started in most of the major provinces. Arrangements have also been devised in some provinces to educate the members of managing committees in the principles of the movement through peripatetic instructors and courses of simple lectures are delivered at central villages while the local unions have been utilized to promote such co-operative education among rural workers.

Internal Management of Societies.—The managing committee of a society consists of five to nine members, the chairman being usually one of the leading persons in the village. The daily work is carried on by the secretary but the managing committee supervises this and has alone the power to admit new members, to receive deposits, to arrange for outside loans, to grant loans to members and to take notice of defaulters. The practice is now growing of fixing the normal credit of every member once or twice in the year at a general meeting and the committee can sanction loans only within the limits so fixed. The accounts of the society are kept by the secretary and the necessary forms, papers, and books are usually supplied from the Registrar's office or the central organisations referred to above to simplify the work of the secretary. The books are kept according to the rules framed by the

Local Governments and are open to inspection by the Registrar and his staff. The accounts are audited, at least once a year by the auditors working under the Registrars of Co-operative Societies and the societies are inspected from time to time by honorary or paid inspectors. In Burma and Madras the supervision is carried out by unions, while in Bihar and Orissa, and Bengal the responsibility for supervision rests mainly with the central banks. In the Central Provinces, the inspection was for some years controlled by the Provincial Federation working through the central banks. Recently the arrangements have been revised and a group system has been introduced under which groups of societies are looked after by full time officers working under local boards composed of representatives of the Co-operative Department. The central bank and the propagandist and educational institutes. The work is co-ordinated through and controlled by divisional representatives boards. In Bombay supervision is conducted partly by unions, partly by central banks and partly by honorary organisers. In the Punjab while paid for by societies, the inspecting staff works under the direct orders of the Provincial Union with the Registrar as its President. Similar arrangement have now been devised in the United Provinces.

The supreme seat of authority in co-operative societies is the entire body of members assembled in general meetings at which every member has one vote and one only. At the annual general meeting held at the close of the co-operative year the accounts are submitted, the balance-sheet passed, and the managing committees with the chairman and secretaries are elected. The general meeting fixes in some provinces the borrowing limit of individual members, lays down the maximum amount up to which the managing committees may borrow during the ensuing year, dismisses members for misconduct or serious default, and settles the rates of interest for loans and deposits. All the net profits of a society are annually carried to the reserve fund, which is indivisible, that is, incapable of distribution as dividend or bonus, which cannot be drawn upon without the sanction of the Registrar, and which must be invested in such manner as the rules framed under the Act may prescribe. It is intended to meet unforeseen losses and to serve as an asset or security in borrowings. Except in the Central Provinces and Madras, and to some extent in a few other provinces, the reserve funds of primary societies are generally utilised in the grant of loans to members, unless they have considerable outside deposits and have to make special arrangements in respect of fluid resource to cover such borrowings.

Main defects.—The main defects of primary societies may be summarized. The most prominent is the evil of unpunctuality. The percentage of overdues so total outstandings was a little over for all the provinces and States, but was as high as in some provinces. These arrears are due more to easy going ways of life and the narrowness of margin between income and expenditure than to malfeasance. Next is the general apathy of the members towards the

working of the societies owing to their lack of education and an absence of higher ideals. The general body very often leaves affairs wholly to the discretion of the committee and the committee transfers its powers to the chairman, secretary or some other member. Then there is the objectionable practice of making book adjustments and taking benefit loans. A grave defect is the inability of the societies to act as real banks, accepting for deposit money when presented, meeting withdrawals of such savings deposits or temporary surplus funds without delay and granting loans on demand according to actual requirements. In many a society, activity is displayed only twice in the year, once during the cultivation season when loans are advanced, and again after harvest time when recoveries are made. In several provinces members have to wait for weeks before they can get funds for agricultural operations and as such operations must be proceeded with, resort to the money lender is not uncommon. With the approval of normal credits in advance and the provision of banking facilities through the opening of branches of district banks or the starting of central banks for smaller areas this defect is now being gradually remedied. To provide for members who want large loans on the security of land for clearance of debt or agricultural improvement, separate land mortgage societies have been started in the Punjab, Madras and Bombay and may be found necessary in other Provinces where large amounts are required by agriculturists on the security of their landed property. The arrangements for financing the scheme of land mortgage credit differ from province to province. In the Punjab Provincial Bank, after entering into an agreement with Government has issued long term debentures bearing interest 6 per cent to the extent of Rs 5 lakhs. A similar scheme for land mortgage banks for groups of villages has also been accepted in Madras where the local Government have agreed to the subscribe to half the capital required if the other half is raised locally. A few banks have already commenced working. But the system of each local bank floating its own debentures does not seem to have found favour and Government have approved of the starting of a central land-mortgage to provide capital by raising debentures Government agreeing to guarantee interest on half a crore of debenture for five years. This Bank was registered in the year and has received a subsidy from Government who have in addition given further assistance by appointing a special staff for the work of inquiry and investigation. It is proposed in Burma to have for the work of land mortgage credit a separate organisation, distinct from the organisation for co-operative credit. In Bombay the assistance asked for from the State for the scheme of co-operative land mortgage banks is the recognition of the land mortgage bank's debentures as trustee securities, and a Government guarantee for payment of interest. The Government of Bombay have approved of the starting of three societies for land mortgage credit, but in the initial stages finance is to be provided for these bodies by the existing Bombay Provincial Bank, the debentures issued by which, in accordance with its agreement with the Secretary of

State, will be purchased by Government to the extent of Rs. 5 lakhs. The three Societies started work during the year and have already absorbed the funds raised by the sale of debentures of the value of two lakhs. As the bye laws of primary agricultural societies in many provinces place a limitation on the amount of loan that can be advanced to an individual and financing agencies are often unable to make long term advances societies cannot be said everywhere to have supplanted the money lender. In Bombay an attempt has been made to remedy this defect by the sanction of special limits in excess of the ordinary limit of persons with larger requirements.

Non-Agricultural Credit Societies.—Non-agricultural credit societies have sprung up in towns and cities as part of a movement for improving the economic condition of persons engaged in handicrafts and cottage industries, of artisans and small traders, members of particular castes and employees of big firms and Government departments. These societies have usually a limited liability. This is due partly to the absence of any assets in real property among their members, but mainly to the field of their work not being compact as is the case with agricultural societies, where every member may be expected to know every other member. Their constitution is based on the Schulze Delslache model. In most societies, the management is honorary, though sometimes when the sphere of a society's work is extended, a paid staff is employed. There is in all societies a substantial share capital, payments being made in monthly instalments, and the rest of the working capital is obtained by local deposits from members and others. Loans from co-operative banks and societies usually form only a meagre proportion of the capital. At the end of the year 1928-29 out of a total working capital of nearly 13 2/3 crores only 1 1/8 crore were held from central banks.

At the end of every year, one-fourth of the net profits must be carried to the reserve fund and the balance may be distributed as dividend or bonus. There are a few drawbacks in the working of these societies. The most serious of these complaints are that the spirit of co-operation is lacking in many non-agricultural societies, that there is too great a desire to go in for profit-making and dividends and a growing tendency to make the societies close preserves once they have started running on profitable lines. The rates of interest on loans are at times higher than they ought to be, and the men at the head of the societies are loath to admit new members who are in need of loans for fear of the latter cutting down the profits.

Included in this group are communal societies, and societies of employees of firms, railway companies and Government offices. There are again, in Bombay and Burma, a few societies organised on the lines of the People's Banks of Italy to assist small traders and artisans in towns and there are also some societies comprising members of particular communities. The larger banks in Bombay and Burma open current accounts grant cash credits and overdrafts and issue or discount local bills of exchange. In Bombay, during the last few years some of the urban people's banks

have also begun to finance traders on the security of goods including agricultural produce, and this line of work is expected to develop considerably in course of time. These banks give promise of developing a truly non-capitalist system of banking run for the people and by the people, providing for the person of small means those modern banking facilities which have so largely assisted in developing trade and industry in other countries. Some of the larger non-agricultural societies after meeting the needs of their members, have large balances on hand, which they were allowed, with the previous sanction of the Registrar, to advance to smaller primary societies. This practice is however being now discontinued, and the surpluses of all primary societies are being concentrated in their central banks through which all finance is provided.

With the growth of industries and the development of cities an important labouring class has grown up in big industrial towns, and this class is as deeply indebted and as badly remunerated as the agriculturists. Ultimately as Co-operation, if introduced, among people of this class, provides opportunities of organization for common ends besides being the means of their economic regeneration. Systematic efforts have been made, however, only in a few centres, elsewhere urban co-operation has so far been confined more or less to middle class people. The first experiment among backward classes was initiated in Bombay under the auspices of an organization known as the Debt Redemption Committee. Considerable work in this direction has also been done in Madras, through social workers and the Labour Department particularly among the depressed classes and among the low paid employees of municipal bodies. The Social Service League of Bombay and the Y M C A in several other centres have lately started a large number of credit societies among factory workers, and the formation of co-operative credit societies for workers in factories has come to be recognised as an essential feature of every well considered scheme of industrial welfare work.

Loans advanced.—The total amount of loans advanced to members by agricultural and non-agricultural societies during the year 1925-26 were Rs. 12,55,52,204 and Rs. 9,22,98,312, respectively. Loans are mostly given on the security of two co-members. Under the Act, societies are allowed, subject to certain conditions, to advance loans on the hypothecation of moveable or immovable property, and there is nothing unco-operative in this so long as personal security which is the central principle of co-operation, is given and the borrower's property is recognised as only a secondary or collateral protection. Mortgages are taken occasionally, especially as security for long-term loans or loans for large amounts. Agricultural credit societies are not permitted to grant advances on the security of moveable property without the special sanction of the Registrar owing to the difficulty likely to be experienced in valuing such property and keeping it in safe custody, advances on the pledge of gold and silver ornaments are recently being introduced at some branches of the Provincial Bank of Bombay for members of rural societies. In

Madras, Bombay, and Burma the practice has been adopted of granting short term advances against agricultural produce to be kept in possession by the societies or by some central organization on their behalf. The system of advances on the specific security of crops in the fields has also been introduced in some provinces. Loans for agricultural purposes are made repayable at harvest time while two or three annual instalments are allowed for repayment of advances taken for purchase of bullocks, carts, implements or for ceremonial or domestic expenses. The repayment of loans for liquidation of previous debt or for land improvement or purchase and installation of agricultural machinery is spread over a longer period extending from five to ten years.

It is impossible to insist on the restriction of loans to productive objects and there are circumstances under which unproductive loans are permissible and even advisable. What should be and generally is borne in mind is that precautions are taken by societies that the expenditure is inevitable and that it is not excessive in amount. The chief objects of the loans advanced are cultivation expenses, purchase of live-stock, fodder, seed, manure and agricultural implements, payment of rent, revenue or irrigation dues, land improvement and sinking of wells, purchase of new lands, repayment of debt or redemption of mortgaged land and personal maintenance in times of scarcity in agricultural societies, and for purchase of raw materials, for industries, or trade, for house building, for education or medical relief and for food and other necessities of life in non-agricultural societies. The rates of interest vary from 9½ per cent. in Madras and Bombay to 12½ in the Punjab and 15 in almost all the other major provinces, both for agricultural and non-agricultural societies. Rates of lending by central banks vary from about 7 or 8 per cent in Madras and Bombay, to 9 in the Punjab, 10 in Burma and about 12 in all the other major provinces. An unsatisfactory feature of the co-operative system in some of the provinces is the laxity and unpunctuality in the matter of repayment of loans by members and a general apathy in the matter on the part of societies. As co-operation is both financially and educationally a failure unless punctuality in repayment is ensured, no efforts are spared by organisations to educate societies in this respect. The Co-operative Societies Act grants to societies priority of claim over other creditors (except the State or the landlord) to enforce any outstanding demand due to the societies from members or past members upon the crops or other agricultural produce, and upon the cattle, fodder or agricultural implements, of members to whom loans have been advanced for the purposes specified. Law courts have ruled that the claim is not valid unless a decree is obtained by a society in its favour in advance. To carry out the intention of the framers of the legislation, the Madras Committee recommended the conversion of this claim into a lien and thus get over the legal difficulty, and this has already been done under the Bombay Co-operative Societies Act, 1925. Most local Governments have also framed rules under the Act enabling the Registrar to refer

disputed claims to arbitration and to enforce the awards of the arbitrator in the same manner as decrees of the Civil Court. Under the rules in some provinces, and according to the new Act in Bombay sums due under awards of arbitrators are, under certain conditions made recoverable according to the procedure allowed for the recovery of arrears of land revenue. The Local Governments of Bengal and Bihar and Orissa were the first to adopt enactments enabling the contributions levied by the liquidator of a cancelled society to be collected in the same manner as arrears of land revenue on an application being made in that behalf by the Registrar of Co-operative Societies. Legislation on similar lines has since then been adopted in almost all other provinces.

The Financing of Agricultural Societies.—As soon as the initial stage of the movement passed, a very urgent problem had to be faced. This was to finance agricultural societies the number of which was growing rapidly. And the problem was solved in different provinces according to the special conditions and the stages of development the movement had attained. In Madras, a central bank, which lent to co-operative societies all over the Presidency, was started without Government aid as early as in 1907. This was followed by the starting of banks at district headquarters. In other provinces district and taluka banks were established making good the deficiency in the local capital of the societies within their respective areas of operations and in some places joint stock banks were persuaded to make advances to agricultural societies direct or through the medium of local central banks. A large number of prosperous non-agricultural societies, as stated above could in the early days afford to make temporary advances to agricultural societies out of their surplus funds. Government aid was also freely given in a few provinces, although with the progress of the movement, this aid was discontinued. In Bombay there was no movement to start local financing agencies and the slow increase in the number of societies made it difficult for central banks with a restricted area of operations to work successfully. Accordingly, the Bombay Central Co-operative Bank was founded in 1911, with the object of financing co-operative societies throughout the Presidency. Later on, local central banks came to be started, and have taken over from the central bank at Bombay the work of financing societies in the various districts. The bank at Bombay has, therefore, assumed the functions and even the name of a Provincial Bank. It confines its dealings with primary societies to those areas where central banks are not likely to be established in the near future or where special local circumstances favour direct relations with a strong financial organisation. For areas served by it, the Provincial Bank has opened twenty-eight branches, and twenty-six branches have been started by several of the leading district central banks.

The Madras Central Bank referred to above has also been converted into a Provincial Bank working through the district banks. A Provincial Bank with central banks and societies affiliated to it is in existence in

Burma, and this Bank finances primary societies either through the affiliated local banks of which, however, the majority are new and with resources undeveloped, or through the guaranteeing unions composed of societies. An Apex Bank was started in the Central Provinces in 1913 to form a link between the central banks and the joint stock banks with branches in the province. It led to the establishment of a Provincial Bank with a similar constitution in Bihar and Orissa. A Provincial Bank composed of central banks as shareholders has been started in Bengal, where, as also in Bihar and Orissa, primary societies are at present financed by central banks at district or taluka headquarters. In the United Provinces, primary societies are financed on the same system, and there too, the starting of a Provincial Apex Bank under which central banks will be federated has long since been under contemplation, but the proposal has been finally abandoned by the Local Government. The Punjab has a local central banking system and an Apex Bank with central banks and societies as shareholders has been started, with power to issue debentures, as in Bombay, with interest guaranteed by Government. Debentures of the value of Rs 5 lakhs have already been issued with interest at 6 per cent. guaranteed by Government. In addition to the Provincial Banks mentioned above, Assam has a Provincial Bank as also the Indian States of Mysore and Hyderabad.

The constitution of central banks is not uniform, but the existing banks may be classified under three general heads:—(1) banks in which the membership is confined to individuals or where societies are admitted as members on exactly the same footing as individuals, (2) banks of which the membership is confined to societies, and (3) banks which include societies and individuals as their members and secure to societies separate representation on the board of directors. The majority of the central banks are of the mixed type and there are hardly any of them which now adhere to the old capitalist constitution. The federal type is theoretically the best but the paucity of the resources of the constituent primary societies, the lack of personnel and the need for enlisting the support of the urban middle classes have all combined to make the mixed type the most popular in almost all provinces. In Bengal and the Punjab, as also to a smaller degree in the United Provinces and Bihar and Orissa, there has recently been an increase in the number of federal central banks, which are found to work well, provided their area of operations is much smaller than a revenue district and they serve a compact group of well established societies. Branches of banks, central and provincial, have been tried with success only in Bombay.

Functions of Central Banks.—The functions of central banks are to balance the funds of societies and to supply capital. But their duties are not limited to the provision of banking facilities only, but often include the inspection and development of societies. Hence in all the major provinces with the exception of the Punjab, Madras and Burma, central banks perform the functions of inspection and guidance of the societies affiliated to them.

and as some they also organise new societies and even take up the work of training and propaganda. Usually, the unit of area for a central bank is fixed as co-terminous with the whole of a revenue district, as the personnel necessary for its successful working may be difficult to secure in a smaller area. However, in most of the provinces of Upper India and Bengal there are in existence central societies for talukas and occasionally for smaller tracts. An important class of institutions included under the statistics of central societies are unions. These may be described as federations of societies which are organized for supervision either combined or not with the assessment or guarantee of loans to primary societies. They do not, however, undertake banking business, except in the Punjab, the unions in which save for the smallness of the area they cover in no way differ from the pure type of central bank referred to above. These supervising unions have a very restricted sphere of operations, covering an area not larger than a taluka. They formed integral parts of the provincial organization in Burma and originally in the Central Provinces also, in one province serving as a link between primary societies and the provincial bank and in the other between primary societies and local banks. In both, however, the machinery has broken down having been found defective. The system of unions for supervision was first started in Madras and has now developed to such an extent that almost every primary society is affiliated to a union. In Bombay guaranteeing unions were introduced as local agencies for supervision and assessment of credit, but the policy now is to have new unions which enforce the guarantee and work as supervising and local controlling bodies with a fairly wide area of operations and engage competent well-trained supervisors. Government and central banks grant subsidies to these bodies. In Burma and Madras, some progress has been made in federating the unions into district councils intended to co-ordinate local activities and to represent local co-operative interests. In Bombay too a beginning has been made in the same direction by constituting district unions boards composed of representatives of the unions, the financing agencies the Co-operative Institute and the Co-operative Department.

Organization and Propaganda—It may be mentioned that in most of the provinces, the work of organizing and looking after the societies was in the earlier days done by the Registrar with the help of a staff of assistant registrars, auditors and other officers and a few honorary non official workers. In Bengal, Bihar and Orissa, and the United Provinces where the central bank system has developed properly, the directors of the central banks either themselves or through a paid agency, organise societies and, as stated above, supervise their working. Apart from these, the number of honorary workers is steadily increasing, and in some provinces there is a staff of specially appointed honorary organisers who regularly assist the Registrars. The activities of the honorary workers are often, however, spasmodic and unorganised, and in most of the major provinces the need has been felt for some co-operative institution which will

so ordinate and systematise the efforts of non-official workers, and place their activities on a responsible basis. The objective is to have the movement directed and controlled through self governing representative bodies like organisation societies or federations existing in Germany, England Ireland and elsewhere. Such institutions carry on active educational propaganda and through the agency of local committees and groups of workers assist in the organisation of new societies and attend to their supervision. Arrangements are made for carrying on the audit of societies on payment of some fixed contributions. Finally, such federations may gradually manage to have the ultimate voice in the determination of policy, and subject to the statutory powers of the Registrar may hope to take over, in course of time, the entire control of the co-operative organisation in a province. In the Central Provinces, there functioned as a controlling body a federation of Co-operative Banks and Societies which provided a regular and efficient system of supervision audit and control, arranged for the training of the federation staff attempted to secure uniformity of practice among co-operative institutions and to promote their interests and foster the spread of co-operation by active propaganda. The working of this Federation was adversely criticised in the report of a Committee of Inquiry appointed by the Local Government in 1922 and it was proposed that this body should be dissolved and replaced by separate educational institutes for the Central Provinces and Berar. Though the Federation has not been dissolved institutes for education and propaganda have already been started in Berar and the Jubulpore and Nerbudda Divisions. A Provincial Union is also in existence in Madras, whose objects are mainly educational and propagandist. Its activities comprise the issuing of co-operative journals the organisation of training classes and the holding of conferences. Its constitution and its line of work have now been revised so as to make it the central self governing organisation in the movement but its working has been considerably hampered by lack of funds and want of support from societies. Its relations both with societies, unions, district federations and the local organizations for Andhra Pradesh, Malabar and Kanara, are still undefined. A Central Institute to focus the efforts of co-operative workers and to carry on propagandist work was established in Bombay in 1918. The objects of this institution are to develop the co-operative movement in the Presidency by promoting the study of co-operation and by co-ordinating the activities of several existing propagandist and organisation agencies. The Institute has no powers of control though it is expected to ascertain and represent the views of co-operators on questions affecting the movement. The activities of the Institute in the mutual aid are carried on through its divisional branches formed on a linguistic basis and local branches in all the revenue districts of the Presidency. This is one of the most active among the non official central organizations in India, and has established international relations. The Provincial Co-operative Institute, as well as similar organizations in other parts of India, join in the celebration of the International Co-operators' Day on the first Saturday in July. As the month of July is

suitable for agriculturists all over India for the organization of demonstrations the celebrations are now proposed to be held annually in November. Public addresses, social gatherings, conventions, processions and mass meetings are arranged on this day in villages, towns and cities. The constitution of the Institute in Bombay has recently been revised with a view to give to societies a larger representation and a predominant share in the working. The Institute receives a handsome grant from Government, but will be in a position to increase its income from within the movement under its revised bye laws. In Bengal a similar propagandist organisation has been started with identical aims. The Society has taken over some of the educational and propagandist work hitherto performed by the Co-operative Department and has assisted in the organisation of various non credit activities, among which prominent mention may be made of the starting of co-operative societies for the sale of jute and paddy and the supply of agricultural requisites. It has also devised arrangements for the training of members of village societies and their secretaries as also for the grant of certificates for work in non credit organizations. A federation with a constitution more or less similar to that of the Central Provinces Federation but having divisional boards to decentralize control is also in existence in Bihar and Orissa, and has appointed a special officer for propaganda and development. In the Punjab, a provincial union, with the Registrar as President, has been organized to conduct the audit and inspection of primary societies and to undertake general propagandist and educational work. The United Provinces have a standing committee serving as an advisory Board for the Registrar's Department and this committee has recently been converted into a statutorily recognized union. In Burma the audit of primary societies is conducted by a Provincial Co-operative Council consisting of representatives of co-operative institutions. This also assists in the organization of the provincial conference and acts as an advisory body to the Registrar. Organization, supervision and propaganda are furthered by district federations of unions of primary societies. Educational and propagandist bodies like the Institute in Bombay have been started in the States of Hyderabad, Mysore, Baroda and Travancore. These are all recent developments and it is still too early to forecast on what lines the transfer of work to representative co-operative agencies will be carried out. In the beginning of the year 1928, an informal Conference of all these institutes and federations was held in Bombay at which it was decided to convene an All India Conference periodically and to establish closer contact among these bodies by the starting, if necessary, of an All India Confederation of these bodies. At another conference held in September 1928, this idea was given a more definite shape and a scheme was drawn up thereafter for a central association which has secured the support of almost all the provincial organisations. The scheme was formally accepted by various provincial institute unions or federations and the All India Institute Association was established in 1929. The first task the Association has undertaken is publication of an Indian

Co-operative Year Book. Another Conference that deserves mention is the one at which representatives of Provincial Co-operative Banks in different provinces and Indian States meet together once in two years. To secure co-ordination in the working of existing provincial banks to bring about closer touch and to convene periodical Conferences, an association of the provincial banks has been started. This Association has made a good beginning by educating public opinion on the place of co-operative banking in the proposed scheme of a central bank and co-ordination of banking through the agency of a Reserve Bank of India. As a result of its efforts the joint select Committee of the Indian Legislature made provision in the Reserve Bank Bill which has now been abandoned, for the appointment of a Director on the Board of the Reserve Bank to represent provincial co-operative banks and also for the negotiation of certain types of bills and securities presented by such banks. The Association was also able to secure for co-operative interests representation on the Central Banking Inquiry Committee as well as on the Provincial Committees.

Other forms of Co operation.—After the passing of the amended Co-operative Societies' Act in 1912, the application of co-operation to purposes other than credit was greatly extended but it is only during the last few years that a general demand for producers and consumers societies has arisen. The total number of non-agricultural non credit societies was 4,368 149 for purchase and sale, 1,100 for production, 1,221 for production and sales, and the remaining 2,758 for other forms of co-operation. Before the year 1918-19, there were only a few stores societies all over the country. In all provinces, particularly in Madras a beginning had been made in the direction of distributive co-operation among the middle classes, while in Bengal and the United Provinces some attention had been devoted to the starting of stores for students living in hostels attached to colleges. The movement obtained popular favour in view of the increasing prices of the daily necessities of life, and the profiteering which assumed serious proportions at the close of the War. Supply unions, store societies, and distributive departments attached to credit societies were organized in some provinces while arrangements were contemplated for obtaining cheap, wholesale supplies for the various distributive organizations. The work of organizing co-operative distribution in rural areas was pushed ahead with a fair amount of success under official auspices in the Punjab and Madras, but in both provinces a setback is now evident. Neither the supply unions nor the primary purchase and sale societies are in a flourishing condition. The consumers movement in urban areas received particular attention in Bombay, Madras, Bengal, Burma, and a few other provinces, but with the disappearance of the special conditions which generated enthusiasm in the years immediately succeeding the close of the War, stagnation has set in and only a few among the numerous store societies started in these provinces have firmly established their position and continue to enjoy the loyal support of their members. Attempts have been made in

two or three provinces to revive the movement by the starting of central organisations for joint wholesale purchases, but the proposals have not yet taken definite shape. Apart from the Triplicane Stores in Madras—which stands in a class by itself, and a few other Stores in Madras Presidency and Mysore State the only successful consumers' societies are stores for college students, some communal hostels or boarding houses and a few agencies for supply of special requisites.

In some Provinces, efforts have been made to revive the ancient handicrafts of the country and cottage industries by organizing co-operative societies for the cottage workers. Many of these societies merely provide cheap credit, but in some places they undertake the supply of raw materials and the sale of manufactured goods. The most important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to strengthen and develop it by the formation of co-operative societies of handloom weavers. Most of the weavers societies are merely credit societies, but some undertake the purchase of yarn for members, and others have store branches to sell the cloth produced by members. They have also been instrumental in introducing improved looms and methods among the conservative weaving classes. In Bengal and the Punjab, much success has attended the organisation of central unions among weavers societies, and similar intensive work in Bihar and Orissa and Bombay has also met with good results. Other industrial societies, to be found in very small numbers here and there are those for gaoles or millmen dyers basket and brass workers in the Central Provinces, Chamars and Dhors in Bombay and the Punjab, lacquerware workers, carpenters wood-carvers, blacksmiths and potters in Mysore, where the State provides special facilities in the shape of loans and technical assistance for the development of artisans societies. In Bombay the producers movement has extended to communities of workers like coppermiths and goldsmiths, carpenters dyers, and others, and drawing its inspiration from the ancient guild spirit animating the communities it aims at creating a strong economic organisation among these various industrial workers and craftsmen, based on self help and self-government. Another offshoot of this movement is the starting of co-operative societies among skilled or unskilled labourers on the lines of the labour societies of Italy. The initiative came from Kashmir while experimental societies were also started in Madras and in Bombay. The object of these is to organize labourers to tender for contracts for public or private works, to eliminate the middle man contractor and to utilise the profits for the economic and social betterment of the laboring community. The Indian Industrial Commission in the course of their inquiries devoted some attention to the development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their recommendations on this subject were, however not very definite and no action appears to have been taken on these. The development of subsidiary occupations in rural areas also

came up for consideration by the Royal Commission on Agriculture in India, who were of opinion that technical education and co-operative organization were the only means by which the smaller industries could hold their own. The Commission particularly recommended the grant of advances to artisans' societies for purchase of improved machinery and suggested the linking up of the cultivator through co-operative agency with localised factories dealing with agricultural produce.

An interesting development during recent years is the provision of housing through co-operative societies. A good number of housing societies have been started in Bombay City and suburbs and also in a few other centres in the Presidency like Ahmedabad and Karachi. They are generally organized on the co-partnership system, under which the society owns the houses and lets them to members at fixed rents. The scheme is feasible for such sections of the middle classes as can provide a certain proportion of the initial capital. Tenant ownership societies have also been started and are now more favoured than pure co-partnership societies. There are some building societies in Madras and a few more in Mysore but their activities are confined mainly to the provision of capital for building schemes and only occasionally extend to the joint purchase of land or of building materials. The Punjab has only one society for co-operative housing and town planning. The Local Governments of Bombay and Madras as also the State of Mysore set apart annually some funds to be advanced to housing societies at fair rates of interest and with repayments spread over a number of years.

The province of Burma was a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there was organised a central re insurance society, which received some financial backing from Government. In the other provinces where it has been introduced co-operative insurance for cattle has made only slight progress, and in Burma, as also in the Punjab where the movement had advanced so far as to necessitate the starting of a re insurance society there has been a setback recently.

Agricultural Co-operation—Co-operative societies have, until recently, been organised only to supply cheap credit to their members, but there are various other fields of work to which they may extend their activities. The total number of agricultural non credit societies is 3,295 of which 404 were societies for purchase and sale, 1,089 for production, 1,086 for production and sale and 747 for other forms of co-operation. Grain banks have, in some provinces been started with advantage, receiving deposits in kind and allowing these to accumulate to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bihar and Orissa, Bengal, Mysore and Coorg. Societies on a similar basis for the storage of fodder have been started in Baroda. Another direction in which the co-operative principle is being applied is the starting of societies for the purchase and distribution among members of pure and selected seed. A number of small societies for supply of seed and

seed unions were organised in the Bombay Presidency and in the Central Provinces and Berar. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Bengal, Bihar and Orissa and Bombay. In the Punjab and in Madras, the supply of agricultural requisites has been undertaken either by the credit societies or the commission indent system or special supply unions are organised for bulking orders, making contracts, distributing goods, and collecting payments.

Joint sale of produce gets popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting societies for the joint sale of paddy the most interesting developments in the direction have taken place in Bombay and Bengal. Societies for the sale of agricultural commodities, chiefly cotton and jaggery, have been started in several districts all over the Bombay Presidency. Co-operative marketing of cotton has recently made much progress in the Dharwar, Broach and Surat districts where these have led to the starting of a few co-operative ginning factories controlled by cotton growers. This aspect of co-operation has lately attracted considerable attention and attempts similar to those made in Bombay have been made in Madras and the Punjab. In the latter province with considerable success at Lyallpur and Montgomery. In Bengal, there has been a move recently to organize the sale of jute and paddy on co-operative lines. A vigorous propaganda has been undertaken for the purpose and a central depot has been opened for the sale of jute principally in Calcutta. The Central Wholesale Society co-ordinates the work of the local Societies, supplies a trained staff gives necessary directions about working arrangements for finance and keeps the cultivation in touch with the Central market. It will indeed be a great achievement if these efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the dearest market and sells in the cheapest. But if co-operative purchase and sale show good progress, his economic position will be much improved. Besides separate societies for the purpose, credit societies and central banks in a few parts of the country, arrange for the joint supply of agricultural requisites. In some places, credit societies undertake the joint purchase of agricultural implements for members while in others separate registered societies are started for the purpose of selling implements or supplying these on hire. In some provinces in Upper India this work is performed by central banks for the societies affiliated to them. Apart from separately registered societies in Bombay the branches of the Provincial Bank have helped considerably in the distribution of seeds, manures and fertilizers, the supply of agricultural implements, and the sale of produce, particularly jaggery. As the work develops it is transferred to separate registered societies or unions.

Efforts have been made in various parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies composed either wholly of gaoles or milkmen or the

producers and the consumers together. The most successful of these efforts has been the group of milk supply societies started in the neighbourhood of Calcutta which have federated themselves into a union. The union has with the help of the Calcutta Municipality and the export officers of Government erected a well-equipped modern plant for pasteurizing milk, and while the milk supply it controls has been satisfactory to consumers it is interesting to note that by co-operation the producers have also considerably improved their economic position, having paid off debts, bought more cattle, put up decent cattle sheds and accumulated substantial sums in their local societies in the shape of shares and reserves. Similar experiments have recently been undertaken in Madras and at Dacca in Eastern Bengal. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of sheep breeding and cattle-breeding societies in the Punjab and elsewhere. In a few provinces there are societies for rice-bulking, the manufacture of jaggery and for joint irrigation. The latter is an interesting development of co-operation which though tried also in Bombay appears to have established itself in popular favour especially in the Burdwan Division of Bengal. This tract once very flourishing, has been ravaged in recent years by frequent floods and famines and the population had lost all initiative and sunk into poverty while their lands deteriorated and malaria claimed a heavy toll. The starting of irrigation societies has opened a new chapter in the history of the tract and has revived the energy of the people and brought them together for common economic endeavour. Ginning on co-operative lines has also been attempted. An interesting experiment in agricultural co-operation is the starting in the Punjab of societies for the consolidation of small and scattered holdings. These arrange to regroup and re-allot the small and scattered holdings of members and if voluntary action proves sufficient for the purpose in other provinces one of the gravest evils of modern Indian agriculture will be solved without the aid of State help or legislation. After the last floods that occurred four years ago in the central parts of the Madras Presidency co-operative societies were started to enable agriculturists to reclaim their land by clearing away the layers of sand and replacing the soil. These societies received assistance from Government both in the shape of long term capital and facilities for transport of material. Similarly, after the heavy flood of 1927 in North Gujarat and Western Sind reconstruction societies have been started in the devastated areas for the repair and rebuilding of houses. The Punjab has in canal areas, some societies for silt clearance and reclamation of waste lands and Burma has led the way in the colonization of newly developed lands on co-operative lines. A number of societies have recently been started in the Punjab to promote better farming, some of which merely call upon members to undertake certain improvements and introduce approved method of agriculture, while others go a stage further and employ a staff for local experiment, research and demonstration work. In Bombay a beginning was made in the direction of starting co-operative societies for joint farm-

ing and the movement may lead to the evolution of a system of co-operative cultivation of land, such as has been extremely successful in Italy in tracts like those to be irrigated under the Sukkur Barrage Scheme. Proposals to encourage this form of co-operation have been submitted to the Government of Bombay by the Hind Co-operative Institute.

Co-operation has already been successful to some extent in assuaging the evil effects of usury but if the improvement in the agriculturists-economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Departments in various provinces do under take propagandist work with this object, but their efforts have not proved as successful as they ought to be. A co-operative society provides an effective agency for reaching the agriculturist, and in many places societies have been the means of bringing home to him the need for improved methods and have been made the centres for conducting the propagandist activities of the Agricultural Department and district Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manure and the certified varieties of seeds. Wherever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection. To this end joint efforts are being promoted in almost all provinces as both the Departments are in charge of one Minister. This co-ordination is secured by joint conferences, and joint boards of co-operation and agriculture and the starting of local agricultural associations registered under the Co-operative Societies Act. Several of these bodies have lately been started in Bihar and Orissa and in Bombay. In Bombay, the tatuka development associations undertake active propagandist work, hold demonstrations and assist in the work of general economic improvement of the agriculturists. The subject of agricultural co-operation and even of agricultural credit came under enquiry by the Royal Commission of Agriculture in India whose Report was published in 1922. The Commission describe the co-operative movement as the greatest hope for the salvation of the rural masses from their crushing burden of debt and look upon it as the natural basis for social, educational and economic development in India where the predominant industry is agriculture. They admit that there are defects in the present organization for rural credit, but are confident that under the influence of patient persistent and systematic education of the members in the principles and meaning of co-operation these defects are bound to disappear in course of time. The provision of this education in co-operation should, the Commission hold, be the principal care of provincial Co-operative Departments, and through the strengthening of the official staff is suggested the Commission also recommend the organization of supervising unions, federations and institutes and the grant to these bodies of financial support. Recommendations are also made for

developing the joint marketing of agricultural produce on co-operative lines and for utilizing the agency of co-operative organizations in the work of agricultural demonstration and propaganda, the supply of approved varieties of seeds, implements and manures, the consolidation of holdings and for social and educational betterment.

Committee on Co-operation in India --

In July 1914, the Government of India issued a lengthy Resolution on Co-operation in India, surveying its progress in the country during the previous ten years. In October of the same year Government appointed a Committee under Sir Edward MacLagan to examine whether the movement, especially in its higher stages, and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters as the constitution and working of central and provincial banks, the financial connection between the various parts of the co-operative organization, the audit, inspection, and management of all classes of societies, and the utilization of the reserve funds. In its Report, which was issued in September 1918, the Committee stated that it had not confined its enquiries to the subjects referred to it, for it had to recognize that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation. The Government of India passed orders in 1918 on the recommendations in the light of the opinions of the Local Governments. With a view further to elicit opinion on the recommendations, a special conference of the Registrars was convened in August 1918, to which all the Registrars and a few selected non-official co-operators were invited. The Conference was also asked to consider the suggestion made by the Committee on Co-operation that as the financing of the movement involved grave difficulties which baffled solution unless the discounting of promissory notes was arranged through an Imperial State Bank or the several Presidency Banks, a careful examination of the question was immediately called for. A proposal was made for the appointment of an expert committee, but the Government of India shelved it by stating that they would assemble the committee at some date convenient to them.

Provincial Legislation.—Under the Reforms, co-operation has been made a provincial subject and also a transferred subject. The control of Co-operative Departments has been entrusted to Ministers and in Madras, the United Provinces, and the Central Provinces, Bills have been drawn up for enactment by the local Legislative Councils to take the place of the Co-operative Societies Act. The Bombay Co-operative Societies Bill was introduced in the Bombay Legislative Council in July 1924, and was finally passed into law in 1925. It reproduces, in the main, the framework of the Act of 1912 but introduces the following important modifications —

- (i) The adoption of a scientific system of classifying societies
- (ii) The improvement of the procedure for liquidation of cancelled societies

(iii) The extension of summary powers of recovery to the awards of arbitrators

(iv) The provision of penalties against specified offences

No other provincial Council except Burma where a Provincial Act was placed on the statute book in 1927 has yet enacted legislation on similar lines

Provincial Inquiries—In the Central Provinces, owing to the drying up of recoveries and the issue of large advances to agriculturists to tide over the bad season of 1920-21 the fluid resources of the movement were seriously depleted and the Apex Bank was able to meet its liabilities only with the financial assistance of Government. The fluid resources of the Provincial Bank were replenished and the Local Government, with the concurrence of the Government of India, placed credits at the disposal of the Provincial Bank and made advances direct to primary societies in the form of Tagnai loans. A Committee of inquiry was appointed which made sweeping recommendations, the most important of which was a proposal to liquidate the Provincial Bank and to place central banks in direct touch with commercial banks. This recommendation was however subsequently turned down by the Local Government although some other recommendations such as the division of agricultural finance into short-term crop loans and long-term non-crop loans met with a considerable measure of public support. In Bengal and the Punjab, the return of favourable seasons averted any breakdown of the system which threatened to overtake the local co-operative organizations when agricultural scarcity on a wide scale caused serious difficulties some years ago. The same may now be asserted of the United Provinces, where there appeared to be some danger of the strain not being quite successfully withstood. The problem there is now that of pushing ahead and a Committee was appointed in 1925 to hold a comprehensive inquiry and to suggest the lines of future development. The Report of the Committee contains numerous recommendations on matters of detailed administration and proposals for strengthening the official staff of the Co-operative Department. The Committee recommended that central banks should be relieved of the work of supervision and inspection which should be entrusted to a staff working under the directions of the Standing Committees of Co-operators. The Committee further suggested that a beginning might be made in the direction of constituting an apex bank for the province but their proposal has not found favour with the local Government. Committees of Inquiry were also appointed in Bihar and Orissa and Mysore. In the former to advise about financial organization and official control and in the latter to lay down a policy of development particularly in relation to higher finance non credit co-operation, agricultural improvement and the relief of indebtedness. In September 1927, on the recommendation of the Madras Legislative Council the Government of Madras appointed a Committee to enquire into the progress of the Co-operative movement in the Presidency and to suggest suitable measures for effecting necessary improvements. The Report

of the Committee was published in 1928, and deals exhaustively with the defects of the movement and sets forth in detail the suggested remedies. Prominent among these is the improvement and strengthening of the system of supervising unions and the linking up of these with the provincial unions through district federations. The provincial union and district federations are charged with the duty of providing education and training and a system of liberal grants in aid is proposed to these bodies. Central banks are advised to undertake the inspection of affiliated societies by appointing their own staff and at the time subsidizing the federation for the work of supervision. Among other important recommendations are the separation of short term and long term finance in rural credit societies and the creation of a central land mortgage bank for the issue of debentures to finance local land mortgage banks. The Agricultural Commission were of opinion that similar inquiries could with advantage, be undertaken in other provinces and pursuant to this suggestion the Government of Burma appointed a Committee of Inquiry the report of which was published in 1929. The report indicates that both the primary societies and the financing agencies are not in a sound financial condition while the system of guaranteeing unions has failed altogether. Recommendations are made for the improvement of the arrangements for supervision inspection and control and the Committee proposes the winding up of the Provincial Bank and the creation of central banks for the districts. Government however has decided to reconstitute the Apex bank by granting to it a special credit of thirty lakhs of rupees.

Banking Inquiry—In the year 1929 at the instance of the Central Legislature and in response to the demands of federations and Chambers of Commerce both Indian and non-Indian the Government of India ordered a comprehensive inquiry into the present position of banking in India and into the measures necessary for promoting banking development strengthening the organization of credit facilities in agriculture and industries co-ordinating the work of various Credit and Banking Agencies and linking up banking with the financial machinery of Government. For conducting local inquiries particularly into the system of agricultural credit, the financing of marketing and internal trade the provision of funds for industrial development and other cognate matters committees of seven members each were appointed in all the provinces. The Committees included one co-operative expert in addition to other members interested in co-operation and examined the possibility of further developing the Co-operative movement for provision of agricultural credit on an organized basis. From the recently published reports of the provincial committees it appears that a majority of the Committees hold the view that the solution of the problem of agricultural credit lies in the improvement of the Co-operative Credit system and its expansion on sound lines. Several Committees have also approved of facilities for the marketing of agricultural produce being developed on co-operative lines and on the whole favour the idea of rural economic life being organized co-operatively. The reports of the provincial

committees are now under consideration by the Indian Central Banking Inquiry Committee, which has on it two representatives of the Co-operative movement, one being a nominee of the All India Provincial Banks Association. In their examination of the problem the Central Committee have the assistance of a group of foreign experts some of whom have been selected because of their study and practical experience of Co-operative Banking in other countries.

Effect of Crises on Co-operation—It is hardly possible without any close and scientific inquiry such as has not yet been carried out, to appreciate accurately the effects of the co-operative movement in enabling agriculturists to resist the rigours of a famine as also to judge the reaction of the latter on the co-operative organisation as there is an interplay of various economic forces affecting the life and industry of agriculturists the proportionate value of which cannot be estimated easily. The agricultural season of 1918-19, however, put the co-operative organisation in most provinces to a very severe test and the reports for the succeeding years afford some indication of the resisting power of the co-operative organisation.

With a better appreciation of the dependence of agricultural finance on the vagaries of seasons, and a more systematic management of the funds of central societies it is anticipated that in future the situation arising out of a failure of rains will be satisfactorily met. In 1913 and the following months, practically the whole of the country was subjected to a banking crisis of considerable magnitude, but a marked feature of this crisis was a tendency to withdraw deposits from commercial institutions and to place them in co-operative banks. The outbreak of the War brought another set of influences into play and there was a temporary tendency to withdraw deposits and a temporary cessation of new deposits. The disturbance was not serious except in two or three provinces and by the end of the year 1914-15, the situation became practically normal. In two of the provinces where the situation caused some anxiety owing to the cessation of fresh deposits in central banks, the Government sanctioned advances to central societies to be utilized in the grant of urgent loans to agricultural societies or to meet withdrawals of deposits. The floods that overtook practically the whole of North Gujarat and some districts of Sind in the earlier part of the monsoon of 1927 affected the working of co-operative societies in the flooded areas, but on the whole, the movement rose to the occasion. Early arrangements were made for helping agriculturists to rescue and to replenish their stocks of grain or fodder and replace lost cattle, implements or domestic necessities of life. Advances were made for these purposes at the special rate of 5 per cent. interest and later on, demands were investigated for rebuilding or repairing houses and funds were provided either through co-operative agency or suitable recommendations were made to the local officials of Government. A charitable fund was also started for the relief of distress among members and contributions to this were received from all parts of India and also from Russia.

Social Reform—Co-operation has in some places stimulated the desire for education

and members of rural societies have been known, even at advanced ages, to receive the elements of education to enable them to put their signatures on their societies' papers, and to take a lively interest in the internal work of their institutions. In Bombay, night schools for adults were started with the aid of a splendid donation made by the late Sir Vithaldas D. Thackersey, while in the Punjab, Bihar, Bengal and elsewhere such expenditure on education is incurred by co-operative institutions themselves. In the Punjab separate rural societies have been registered to conduct night schools and also to insist on compulsory education for the children of members. The Punjab also possesses a number of societies for the promotion of better living, the members of which societies lay down a social code for themselves breach of this code involves punishment by fines. Similar societies are being started in the United Provinces. The Madras Presidency has taken the lead in undertaking the work of rural reconstruction on a comprehensive basis in several districts through the agency of local co-operative organisations, financing the programme with the help of the central and provincial banks and co-ordinating it under the aegis of the provincial co-operative union. In Bengal, attempts have been made to fight the scourge of malaria and to promote village sanitation by starting anti-malarial co-operative societies. The societies are federated into a central union in Calcutta which supplements the local funds, co-ordinates the working of the societies, issues literature on hygiene and sanitation, and arranges with local doctors for the provision of free medical relief to members. There are not a few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has insisted on good moral conduct and attempted to improve the standard of life. Societies have occasionally condemned excessive expenditure on marriages, and have thus indirectly trained members to habits of thrift. The liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and as a result of the practice of thrift freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent. what he could not borrow at less than 20 to 75 per cent. formerly. It has been calculated that in interest alone the agriculturists of India, by taking loans from co-operative credit societies instead of from the village money-lenders, are even now saving themselves from an unnecessary burden of over three crores of rupees. The village rates of interest have naturally gone down considerably. And the Sowkar is, in most places, not the terror and the force that he was. Business habits have been inculcated with a beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Special societies are started in the Punjab to promote thrift, while in Bombay, Bengal and Bihar & Orissa, the savings of members are attracted to the village

credit societies and either special facilities are provided or special propaganda is conducted to induce members to save and deposit voluntarily. Association in a public institution for common good has brought home to the people the blessings of unity and litigation has often decreased in villages with co-operative societies. In the Punjab, a number of societies have been started in rural areas whose members agree to refer all disputes to arbitration by their elected committees and to abide by the awards of

arbitrators. Participation in the management of societies has instilled among members the important lessons of self help and self reliance but the most important achievement of co-operation has been the development of sense of communal life—a feeling of "all for each and each for all"—among members of village societies and the gradual revival of the corporate instincts which made Indian rural organization famous in the world's history.

The following statements show the progress of the co-operative movement in different provinces, and contain some information about their detailed working till the end of the official year 1928-29.

Societies : Literary, Scientific and Social.

AGRICULTURAL AND HORTICULTURAL SOCIETY OF INDIA (Calcutta).—Founded 1820. A Class Annual subscription Rs 82. Ku tranee fee Rs 8. B Class Annual subscription Rs 12. Secretary S Percy Lancaster. FLS PRES MRAS Offg Superintendent B (Christian), 1, Alipore Road Alipore.

AGRI-HORTICULTURAL SOCIETY OF BURMA.—Superintendent C A Giffening. Agri Horticultural Gardens Ka dawgay, Rangoon.

AGRI-HORTICULTURAL SOCIETY OF MADRAS.—Established 1830. Quarterly subscription for members in Class A Rs 7 in Class B Rs 3. President H E The Governor of Madras, Chairman C W F Cotton CIB. Hon Secretary Mr H M Naidu. Hon Treasurer Mr H S (Class). Toydampett, S W Madras.

ANGLO-INDIAN LEAGUE.—To protect the interests of Anglo-Indians. President Dr H K B Moreno. Plt Honorary Secretary Mrs V C Bastien. Hon Treasurer Mr S V Cowen. Office 12 Wellesley Square, Calcutta.

ANTHROPOLOGICAL SOCIETY OF BOMBAY.—Founded 1889, to promote the prosecution of Anthropological research in India to correspond with Anthropological Societies throughout the world to hold monthly meetings for reading and discussing papers and to publish a journal containing the transactions of the Society. Annual subscription Rs 10. President Shams ul Lima. Dr Jivanji Jamshedji Modi B.A., Ph.D. 172 Hornby Road Bombay. Hon Secretary Principal J McKenzie, M.A.

BENARES MATHEMATICAL SOCIETY.—Founded in 1918 for the encouragement and promotion of research in the various branches of Pure and Applied Mathematics and in the History of Mathematics. It conducts a journal 'The Proceedings of the Benares Mathematical Society' in which original papers on Mathematics are published and maintains a library. There are about 60 members from all parts of India. Admission fee Rs 10. Annual subscription Rs 12 (resident members) and Rs 20 (non resident members). Life President Dr G. rash Prasad, M.A. (Cantab). Sec Secretary Prof Chandri Prasad, M.A. BSC Treasurer Prof Pushapati Prasad M.A., BSC.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of late Sir R. G. Bhandarkar, at the hands of H. E. Lord Willington, who became its first President. Its objects are to publish critical editions of texts and original works bearing on Oriental Antiquities, to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. The valuable library of the late Dr Sir R. G. Bhandarkar, which he had bequeathed already to the Institute was handed over after his demise by his executors to the Institute, and is now located in the Central Hall of the Institute. Since the 1st

of April 1918 the Government of Bombay have transferred to the custody of the Institute the unique collection of nearly 20,000 manuscripts formerly in charge of the Deccan College together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute a grant of Rs. 12,000 a year for the publication of the Government Oriental Series. The Institute has under taken to edit the *Mahabharata* critically at the request of the Chief of Amudhi who has promised a grant of Rs. 5,000 annually for that purpose. Grants are being received from the Government of India, the University of Bombay and the Governments of Bombay, Boma, Baroda, Mysore and Madras as well as several Southern Mahratta States. The Institute has a journal called *Annals of the Bhandarkar Institute* published four times a year. It also held under its auspices the first Oriental Conference on the 6th and 7th of November 1919 under the patronage of H. F. Sir George Lloyd and the presidency of Sir B. G. Bhandarkar. Owing to liberal donations from the Latas and the Jain community supplemented by Grants in Aid from the Government of Bombay the Institute is housed in a fine building near the hills behind the Home of the Servants of India Society. Since August 1927 the Institute has been conducting regular V.A. classes in Sanskrit, Pali, Ardhamagadhi, and Ancient Indian Culture, where at present over 25 students paying Rs. 20 per term are attending. It is intended shortly to affiliate this class to the Bombay University. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life. Members can subject to certain conditions borrow books from the library and get the Journal free and other publications (a list covering about 100 names sent free upon request) at concession rates. Secretary Dr S. A. Bolvalkar M.A. Ph.D. (Harvard).

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually held every January. Annual subscription Rs. 10. Life member Rs. 100. Hon-Secretary V. V. Oak Bar-at-Law. Offg Secretary Ground Floor Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1864 to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 60. Secretary Dr Edward Parker Town Hall Bombay.

BOMBAY NATURAL HISTORY SOCIETY (Registered under Act XXI of 1860).—Founded 1885 to promote the study of Natural History in all its branches. The Society has a membership of about 1,400 all over the world and a museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. In 1921 the Society was entrusted with the management

of the Natural History Section of the Prince of Wales Museum and a great part of the Society's collections have been transferred to that Museum. A Journal is published at varying times during the year which contains articles on natural history and sport as well as descriptions of new species and local lists of different orders. The Society's library is open to members and books may be borrowed under special arrangement by members residing in the mofussil. The Society's Taxidermist Department undertakes the curing and mounting of trophies for members. Annual subscription Rs. 25. Entrance fee Rs. 20. *Patrons* H. K. The Maharaja of India H. B. BRITISH AND FOREIGN BIBLE SOCIETY—
Since 1811 the British and Foreign Bible

Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1818, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875 while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached nearly 11,88,000 issues in 1928. The Bible, Testaments, and Portions in the various vernaculars are sold at rates which the very poorest can pay and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass University examinations, as under—

The New Testament and Psalms to Matriculates and the Bible to Graduates.

Portions of Scriptures in the important vernaculars have been prepared in raised type for the use of the blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Woman's work. Besides the British and Foreign Bible Society there is Bible work carried on in India and Burma in a much smaller way by the Bible Translation Society which is connected with the Baptist Missionary Society—the National Bible Society of Scotland, the American Bible Society and the Tanjorebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma—

TABLE OF CIRCULATION OF THE B. F. B. S. IN INDIA

Auxiliaries	1927	1926	1925	1924
Calcutta	174,924	178,270	122,781	107,094
Bombay	169,593	155,116	164,820	161,263
Madras	223,125	211,787	233,371	215,247
Bangalore	88,936	17,461	2,315	29,088
North India	154,272	154,683	193,228	144,930
Punjab	106,628	73,848	81,593	61,781
Burma	78,618	75,462	71,928	63,472
Total	976,981	861,818	842,446	782,815

These returns do not include the copies which any Auxiliary has supplied to London or to other Auxiliaries and agencies during the year.

INDIAN MATHEMATICAL SOCIETY—Founded in
1907 for the advancement of Mathematical
studies in India. It conducts a bi-monthly
journal in which papers on mathematical sub-
jects are published and maintains a library
with current mathematical periodicals in all
languages and new books on the subject.
The library is located in the Fergusson College,
Poona whence the journals and books are
circulated to members by post. The journal
of the Society is published in Madras. There
are about 225 members from all parts of
India. President V Ramaswami Aiyar M.A.

**INDIAN ROADS AND TRANSPORT DEVELOPMENT
ASSOCIATION LTD.**—The Association was
formed in 1928 and registered in October 1927,
and is conducted on similar lines to the Euro-
pean Association with a Council having Head
quarters in Bombay. The subscription for
membership of the Association is Re 1 per
annum.

The aims and objects of the Association are
to promote the cause of Road Development
throughout India by making representations to
the Government of India Government of
Provinces District Boards and other public
bodies concerned regarding the construction
improvement and maintenance of Roads and
Bridges and the improvement of methods
of transport to make representations to all
or any of the bodies regarding the adjustment
of taxation customs duties and excise affecting
motor vehicles and other modes of transport
and employment of same in such manner as
to facilitate the development of Road
Transport throughout India to educate the
public by means of propaganda work and
to create authoritative public opinion with
regard to the needs of and advantages to be
derived from improved road communi-
cations. All persons firms or companies
interested in Road and Transport problems
are eligible for election as members.

Branches are already in existence in Bombay
Calcutta Madras Karachi and Assam and
others will be formed as and when occasion
demands. The following are the addresses
of the Honorary Secretaries of the Branches.

INDIA SUNDAY SCHOOL UNION—The India Sunday School Union is an international organisation having for its object the strengthening of religious and moral education throughout the Indian Empire. It embraces a score of Auxiliaries, which are generally associated with language areas. There is a number of full time workers European and Indian, but much help is given in all parts of the organisation by honorary helpers.

The I S S U was founded in Allahabad in 1876. Its general committee is made up of representatives from the National Christian Council of India, from the auxiliaries and from other sources. Funds for the carrying on of the work are partially found in India but the major part is still provided by The World's Sunday School Association. The headquarters of the Union is at Coonoor in the Nilgiri Hills where buldies the office and well-stocked book shop there is The St Andrew Teacher Training Institution. In this institution a leaders in religious education from all parts of India are trained for their duties.

Besides the central training college the chief activities of the Union are the providing of literature for the religious educational needs of India, good literature for teachers and for children, extension courses of lectures delivered in English or vernaculars in all parts of the Empire, the arranging of teachers' conventions and conferences, the arrangement of examinations in Scripture for teachers and scholars in the Sunday Schools.

The following journals and quarterlies are published by the I S S U—

The India Sunday School Journal,
The Senior Lesson Quarterly

Approximately a million scholars in Sunday Schools and Day Schools are touched by the activities of the Union, and 80,000 to 70,000 teachers.

The officers of the I S S U are—President—Bishop J. W. Robinson, Delhi. Treasurer—W. H. Warren, Madras. General Secretary—K. A. Annett, London. Assistant Secretary—Rev. N. Franklin, Coonoor.

INSTITUTION OF ENGINEERS (INDIA)—The organisation of the Institution commenced in 1919 and it was inaugurated by H. B. Lord Chelmsford early in 1921. Its object is to promote and advance the science, practice and business of engineering in India on the same lines as are adopted by the Institutions of Civil, Mechanical and Electrical Engineers in the United Kingdom. The standard of qualification is the same. Membership is divided into four classes, viz., Members, Associate Members, Companions and Associates and there is an additional class for students. President, Sir Cecil B. de Ver. Atkinson, 100, Annexe, Office—8, Esplanade Row, East P. O. Box 600, Calcutta. MADRAS FINN ARTS SOCIETY—Patron, H. E. Lord Hon. Viscount Goschen, President The Hon. Mr. Justice B. H. Wallace, Secretary, P. Y. Fyson, Chopaluk, Presidency College, Madras.

ADRIAN LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY—Secretary, B. W. Batchelor, Messrs Binny & Co., Madras.

NATIONAL HORSE BREEDING AND SHOW SOCIETY OF INDIA—Formed in 1923, by Major General Sir Bernard James CB OBE MVO who was President from 1923 to 1925. Objects To form a national body of public opinion on horse-breeding matters to encourage and promote horse-breeding in India, to protect and promote the interests of horse breeders and to give them every encouragement, to improve and standardise the various types of horse bred in India to prepare an Indian stud book and to promote uniformity in all matters connected with horse shows in India. Patron-in-Chief—H. E. The Viceroy, President (for 1929-31) Nawab Mir Malik Khairat Khan Tiwana of Kalra Shahpur District Punjab. Secretary Major General Sir Bernard James, CB OBE, MVO. The Society issues the following publications:

Horse Breeding An Illustrated Quarterly Journal in English and Urdu. Stallion Register and Supplement, Indian Stud Book, Record of Country Bred Racing, Ahmednagar Stud Book Show Judging Pamphlet. The Second Volume of the Indian Stud Book was published at the end of 1930. The Society holds The Imperial Delhi Horse Show annually in February. Registered Office—Delhi.

NATIONAL INDIAN ASSOCIATION—Founded in 1870. Its objects are—(a) To extend in England knowledge of India, and interest in the people of that country. (b) To co-operate with all efforts made for advancing Education and Social reform in India. (c) To promote friendly intercourse between English people and the people of India. In all the proceedings of the Association the principle of non interference in religion and avoidance of political controversy is strictly maintained. It has branches in Bombay, Madras, Ahmedabad, Nagpur, Calcutta, Mangpur and Lahore. Hon. Secretary Miss Beck, 21, Cromwell road, London. Publication, *The Indian Magazine and Review* (8 numbers a year) which chronicles the doings of the Association in England and in India and takes note of movements for educational and social progress. It publishes articles about the East to interest Western readers and articles about the West to interest readers in the East. *Life Members*—Ten Guineas. Annual Subscriptions, Members, one Guinea. County Members, Ten shillings. Associate Students, Seven shillings and Six pence.

PASSENGERS AND TRAFFIC RELIEF ASSOCIATION (Established in 1915). Head Office—130, Meadows Street Fort, Bombay. Objects—(a) To inquire into and ascertain grievances with respect to passengers in India generally. (b) To petition Government, local bodies, Railway, Steamers and other companies carrying passengers and traffic, to take all proper and necessary steps to obtain redress with regard to the said grievances. (c) To hold periodical meetings and discuss questions relating to grievances. (d) To start branch offices throughout India, and to affiliate societies and bodies having objects similar to this Association. (e) To start a fund to meet expenses for carrying out the objects of the Association. President—Meyer Nimin, Esquire, M.A., Vice-Presidents—

L. R. Talwar Esquire, B.A., Lachmandas Daga, Esquire Hon. Secretaries—Jivraj G. Narsay, Esquire Khan Bahadur P. K. Ghamat Assistant Secretary—Patanjali Jamseifi, Esquire

PHILATELIC SOCIETY OF INDIA—Formed March 1897 Annual subscription Rs. 15 Secretary, Jna. Godinho, 15, Burrows Street, Bombay

PHOTOGRAPHIC SOCIETY OF INDIA (Calcutta)—Annual subscription Rs. 30 (Fellow Members) and Rs. 15 (Mofussil members) Entrance fee Rs. 20 and Rs. 10 The Society is affiliated to the Royal Photographic Society of Great Britain London, and holds annual exhibitions distributes a monthly journal to members, and undertakes developing printing and enlarging work from its members only. There are excellent work rooms apparatus and reading room at the Society's Head quarters at 229, Lower Circular Road, Calcutta Hon. Secretary A. Hearn 229 Lower Circular Road, Calcutta

JOOA BEVA SADAN SOCIETY—This Institution was started in 1908 by the late Mrs. Ramabai Lunade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently though for a few years in the beginning it was conducted as a branch of the Bombay Beva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren, especially the former in backward areas and working on a non-sectarian basis. Nominal fees are now being charged for instruction except for the Music Classes for Special Classes in English, and for High School classes, etc. There are eight different departments subdivided into 60 classes. Arrangements are made for training Nurses and Midwives and women Sub Assistant Surgeons at the Sassoon Hospital Poona, and a hostel is maintained for the former and two for those attending the Sub Assistant Surgeons' Classes. There is a Public Health School affiliated to the Lady Chelmsford League for Maternity and Child Welfare Delhi. The number in those three hostels is now about 85. Besides there is a full fledged training College named after Jai Motilal Wadia with about 46 students excluding those in the V F Class for being trained as Mistresses for vernacular schools. This college is probably the only college in India maintained by a non-official non-Christian missionary body teaching the full course. The results of the Certificate Examination held in the year 1927-28 under the authority of the Local Government Training College for Women were as follows: 1 year senior 12. The total number of certificates granted so far is 247 now. The Practising School for little girls attached to the Training College has now eleven classes with 265 students reading up to the Marathi VI Standard, English being taught in the V standard class. Primary Classes for grown up women teaching up to the Marathi V Standard are attended by about 100 women. It is here that poor women are recruited for training as a teacher, nurse, midwife, or doctor. Special classes for teach-

ing English, First Aid, Home Nursing were attended by about 95 students, the Music Classes by 112 students and the Work room Classes for teaching Sewing, Embroidery, Knitting and Weaving by 158 women. Thus, the total number of pupils is 984 to-day. There are two branches of the Society started at Satara and Baranasi which are named after Lady Vithaldas Thakorey, the wife of the greatest helper of the Society so far the late Sir Vithal das D. Thakorey. Besides there are branches started at Bombay (Dadar and Girgaum), Sholapur, Ahmednagar, Alibag, Nasik, Nagpur, Gwalior and Madras for either educational or medical work or for both. Thus the total number of women and girls including about 160 duplications in the rolls at these various Centres of the Society is over 1,000. There are in Poona six hostels three of which are located at the headquarters and the other three in the Baste's Path and the Sonawar Peth for Nurses, etc., undertaking at the Sassoon Hospital. The number of resident students is about 200 in these six hostels. One of the three hostels at the headquarters is intended for women of depressed class. The number of these women at present is 7. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Two fully qualified Nurses have so far been sent by the Society for the first graduate course in Public Health Nursing at Bedford College for women, London with the partial help of a scholarship of the League of Red Cross Society, Paris. There is an active Infant Welfare centre and ante-natal clinics with the average daily attendance of 50 excluding expectant mothers. The Society has extended its medical activities in Bombay by undertaking with the help of two charitable Trusts in Bombay to work out the scheme of Maternity, Infant Welfare Child Welfare and General Nursing for the women and children of the Bham Community under the supervision of Mr. G. K. Devadhar the organizer of the society. This scheme has a Maternity Hospital and Nursing Home, and three Infant Welfare centres. Besides, there are Maternity Hospitals and Nursing Homes at Ahmednagar, Alibag, Nasik and Sholapur under the management of the society in connection with other organizations. New life and efficiency the Countess of Irwin the Countess of Reading, Lady Wilson, Lady Lloyn, Lady Willington, Lady Sydenham and Lady Chelmsford are Hon. Patronesses. The institution is largely dependant upon public contributions and Government assistance. The annual expenditure of the whole organization now exceeds Rs. 2,50,000. President Shrimant Saubhagyaaji H. H. the Rautsahab of Sangli, Honorary Organizer and General Secretary Mr. Gopal Krishna Devadhar, M.A., C.I.E., Local Secretary and Treasurer Mrs. Yamunabai Dhat, Lady Superintendent and Secretary for Development and Collections Mrs. Janakibai Bhat (Kawer Hind Silver Medal), Joint Lady Superintendents Mrs. Saralabai Nalk, M.A., and Miss Dwarakabai Dhat, B.A., B.T. Hon. Secretaries, Nursing and Medical Education Committee Rao Baladhar

RECREATION CLUB INSTITUTE—This Institute was started in 1912-13 by the members of the Ismaili Dhammic (religious) Library in Bombay. Its central office is in Bombay with branches at Ahmedabad, Ahmednagar, Karachi, Hyderabad (Sindh), Poona, Warangal, etc. The aims and objects of the society are to elevate and improve the social, economic and spiritual condition of the depressed and poor classes of people and with that intent to found primary schools, associations and such departments and to take all constructive means to achieve the above objects. The Institute has 2 orphanages with 150 inmates, industrial works, domestic industries, sales depots, clubs, libraries, etc. It also issues two Anglo Vernacular papers, *The Ismaili* (a weekly) and *The Azari* (a monthly). *Hon Secretary*, Mr Hasan Lalji Devraj

ROYAL SOCIETY OF ARTS, INDIAN SECTION—This Society was founded in London in 1754. Its recently published history by Sir Henry Truman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a Committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed into the Indian Section, were started. The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and

it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact thanks to a very large extent to the work of the Indian Section and of the allied section for the Dominions and Colonies a large proportion of the present number of members come from the dependencies of the Empire abroad. *Secretary of the Society* G K Menzies, *Secretary of the Indian and Dominions and Colonies Sections* W Lerry, B A 108 (retired) 18 John Street, Adelphi London, W C 2

SERVANTS OF INDIA SOCIETY—The Servants of India Society founded by the late Hon Mr G K Gokhale in 1905 is a body of men who are pledged to devote all their lives to the service of the country on such allowances as the Society may be able to give. Its objects are to train national missionaries for the service of India and to promote by all constitutional means the interests of the Indian people. Its present strength is 21 Ordinary members, 2 members under training, 2 permanent assistants, 1 Attache and 3 probationers. The Society has its head quarters in Poona with branches at Madras, Bombay, Alkhabad and Nagpur and other centres of work at Dohad in Gujarat, Mangalore and Calcutta in the Madras Presidency, Lucknow in U P, Lahore in the Punjab and Cuttack in Bihar and Orissa. The Society's work is primarily political, but as it believes in all round progress of the Indian people it has always laid equal emphasis on social, economic, educational, labour and depressed class activities and has worked in these fields. The political work is done through the legislatures, the non official political organizations, deputations to foreign countries and propaganda. The Right Hon V S Srinivasa Sastry was in the old Imperial Legislative Council and in the new Council of State till 1924 and has to his credit many achievements. Pandit Bhrday Nath Kunzru was a member of the U P Legislative Council and of the Legislative Assembly. He takes special interest in the questions of the Indianisation of Army, public services, education and Indians overseas. Mr N M Joshi has been a nominated member of the Assembly since 1921 and has to his credit many a labour legislation. Mr N A Darda was for three years a member of the C P Council. Mr Joshi was a member of Bombay Municipal Corporation and Mr B. R. Bakhale a member of the Board of the Port of Bombay for a short period. Mr Kunzru has been the General Secretary of the National Liberal Federation of India, and Messrs Joshi, S P Andrews, Dube and K P Kaul are Secretaries of its Provincial branches and have all done the work of organising political conferences. Messrs Sastry and Kunzru were members of the Liberal Party's deputation to England during the Reforms period of 1919-20. Mr Sastry again toured some of the Dominions in 1921 on behalf of the Government of India to secure legitimate rights for Indians there, attended as India's representative the Assembly of the League of Nations and the Washington Naval Disarmament Conference,

went to England in 1923 as a Leader of the Kenya Deputation of the Indian Legislature, went in 1927 to South Africa as Agent-General of the Government of India under the now famous Cape Town Agreement for eighteen months and lastly went to Kenya in 1929 on behalf of Government to place the Kenya Indians' case before Sir Samuel Wilson. His achievements in South Africa are a marvel to the world and brought the White and Indian communities together. Mr. Kunzru went in 1929 to Kenya to preside over the East African Congress and to England as the spokesman of the Kenya Indians to put their case before the British Government. Mr. P. Kodand Rao was in South Africa with Mr. Sastri and in Kenya with Mr. Kunzru and has mastered the question of Indians there. Mr. Joshi was a member of the Nehru Committee which is the author of the now famous Nehru Report on Constitutional Reforms.
